Street Address/Nearest Cross Streets	Central median and eastern side of Indian Head Highway, north of Livingston Road	
City	Accokeek	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median and eastern side of Indian Head Highway (MD 210), north of Livingston Road, in Accokeek, Maryland. The area was primarily forested land until the late 1980s, when development was observed to the south. An MDE VCP site is located southwest of the LOD. This site is a vacant 11 acre parcel located approximately 360 feet west of the LOD. In 1999, a UST removal at the Accokeek Gas and Go Service Station, south of the site and approximately 1,000 feet southwest of the LOD, led to the opening of an OCP case. Investigations conducted determined groundwater on the site had been impacted from the off-site petroleum release. In July 2009, the OCP issued a Notice of Compliance and the case was considered closed. In August 2009, a Phase II environmental site assessment was conducted determined that groundwater beneath the property had been impacted with elevated levels of petroleum compounds. In 2010, the owners of the site entered into the MDE VCP program and in February 2011, MDE issued a no further remediation determination for the site and the case was closed. Information on MDE's website for the site stated that surface water and groundwater on the site flows northwest (crossgradient of the LOD) towards Farmington Creek. Based on available site characterization information, the impacted groundwater is not believed to have affected the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1, 6486	Accokeek – Vacant Parcels 15909 Hickory Knoll Road	360	LUC, SHWS, VCP – This site is a vacant 11 acre parcel located approximately 360 feet west of the LOD. The property consists primarily of undeveloped forested land. In 1999, an underground storage tank (UST) removal at the Accokeek Gas and Go Service Station, south of the site and approximately 1,000 feet southwest of the LOD, led to the opening of an MDE Oil Control Program (OCP) case (1999-1655PG1). The OCP investigated environmental impacts due to a petroleum release from the USTs and conducted further investigations in 2003 and 2004 that indicated the groundwater on the site had been impacted from the off-site petroleum release. In July 2009, the OCP issued a Notice of Compliance and the case was considered closed. In December 2008, a Phase I environmental site assessment was conducted at the site. This assessment indicated that the site had one recognized environmental condition which was the former USTs located at an adjacent property. A Phase II environmental site assessment was conducted at the properties in August 2009 and sampling indicated that the property had been impacted by elevated levels of petroleum compounds in groundwater. Additional soil sampling for metals and semi-volatile organic compounds was conducted at the property to assess potential impacts from debris dumping. Soil gas sampling was performed in July 2009 to determine the extent and nature of risks associated with sub-surface vapors from the off-site USTs. In 2010, the owners of the site entered into the MDE VCP program and in February 2011, MDE issued a no further remediation determination for the site and the case was closed. Information on MDE's website for the site stated that surface water and groundwater on the site flows northwest (crossgradient of the LOD) towards Farmington Creek. Based on available information on the site characterization activities performed on the gas station to the south, impacted groundwater is not believed to have affected the LOD.	Low

Watershed:	WAS	
Street Address/Nearest Cross Streets	Along Indian Head Highway, north of Old Fort Road	
City	Fort Washington	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies primarily in the center median of Indian Head Highway (MD 210), north of Old Fort Road, in Fort Washington, Maryland. The northern end of the LOD extends east, across Indian Head Highway. The area surrounding is mostly forested lands with residential properties to the east and west. Residential development to the east occurred prior to 1960, while residential development to the west occurred in the early 1980s. By the mid-2000s, the surrounding area is developed in its current configuration. Two records of concern were listed in the database, one of which was a drycleaner incorrectly mapped as being in the residential neighborhood to the southwest. The other record is associated with a 70-gallon release of heating oil at a residence 582 feet northeast (upgradient) of the LOD. Based on the distance of this release incident, impacts to the LOD are unlikely.</p>

Watershed:	WAS	
Street Address/Nearest Cross Streets	West side of Kenilworth Avenue, north of Decatur Street	
City	Hyattsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the western side of Kenilworth Avenue (MD 201), north of Decatur Street, in Hyattsville, Maryland. The surrounding area is mixed-use commercial, residential and open spaces. Apartment and townhouse buildings are located north and west of the LOD, and commercial businesses are situated south and east, across Kenilworth Avenue. The area was primarily residential properties and forested land in 1937. Following development of the adjacent property to the west as townhomes in 1994, the surrounding area became developed in its current configuration. Thirteen facilities were flagged on being on one or more environmental databases, including RCRA SQG/NON GEN, UST, OCP, ERNS, FINDS/FRS, HMIRS and ALT FUELS databases. The closest facility, the Neils Auto Parts store located directly across Kenilworth Avenue, was listed as a small quantity generator, likely for the acceptance of spent automotive batteries and/or solvents. No violations were reported and automotive repairs do not occur at this facility. Based on this info, impacts to the LOD from this facility are unlikely. The remaining 12 flagged facilities were located 330 feet or greater from the LOD, and are not expected to have any impact on the LOD.</p>

Thirteen facilities were flagged on being on one or more databases, including RCRA SQG/NON GEN, UST, OCP, FINDS/FRS, HMIRS and ALT FUELS databases. The closest facility, the Neils Auto Parts store located directly across Kenilworth Avenue, was listed as a small quantity generator, likely for the acceptance of spent automotive batteries and/or solvents. No violations were reported and automotive repairs do not occur at this facility. Based on this info, impacts to the LOD from this facility are unlikely. A former gas station, located 288 feet crossgradient from the LOD, previously had five USTs and three OCP cases assigned to it. The USTs were removed between 1993 and 2002. No reports of releases were noted, and no USTs remain. Based on the distance and hydraulic direction, this former gas station is unlikely to have an impact on the LOD. The remaining 11 flagged facilities were located 375 feet or greater from the LOD, and are not expected to have any impact on the LOD.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the western side of Edmonston Road (MD 201), north of Crescent Road, in Greenbelt, Maryland. The general area consists of a mix of commercial and residential development. The surrounding area was primarily developed rural agricultural up until the early 1970s, when residential development began to occur to the east. Commercial development to the west began in the early 1980s and continued through 2005, when the surrounding area was observed in its current configuration. A Maryland State Highway Administration facility, located approximately 180 feet to the west (crossgradient), was listed as having three 4,000-gallon USTs (two diesel and one gasoline) that impacted soils onsite between 1991 and 1998. Impacted soil was addressed and the cases were eventually closed. Currently, the site has two 4,000-gallon gasohol USTs located approximately 415 feet west (crossgradient) of the LOD. In 2017, a spill of approximately 8-gallons of hydraulic fluid was released approximately 40 feet south (downgradient) of the LOD. Based on the distance and hydraulic directions of these sites/ incidents, impacts to the LOD are unlikely.</p>

Quadrant:	SW
Watershed:	WAS
Street Address/Nearest Cross Streets	West side of Edmonston Road, north of Cherrywood Lane
City	Greenbelt
County	Prince George's
Type of property	ROW
Ranking Rationale Site Summary	
<p>The LOD is located along west side of Edmonston Road (MD 201), immediately north of Cherrywood Lane, in Greenbelt, Maryland. The area surrounding the LOD consists of agricultural lands and forest. Commercial and residential development is present to the west, southeast, and south, which occurred primarily between the 1960s and 1990s. The U.S. District Courthouse, located approximately 536 feet southeast of the LOD, previously had two USTs excavated and removed in November 2015. No releases were identified in association with these USTs. The LOD is located within the boundaries of Beltsville Agricultural Research Center (BARC), which was listed as a CERCLA "Superfund" site in 1994. The BARC facility dates to 1910 when USDA purchased a 475-acre farm to conduct research on animal husbandry, dairying, and animal diseases. Additional land was purchased over the next few years to expand the research facility, which ultimately grew to encompass approximately 12,000 acres. BARC was historically divided into five separate administrative units known as "Farms." These units are specifically identified as North, South, Linkage, Central, and East Farms. Based on a review of aerial photographs and available maps, the LOD is located within the boundary of the Linkage farm and directly south of the South Farm, north of Edmonston Road. USDA-ARS is currently performing a full range of site screening, restoration, and monitoring activities, consistent with requirements stipulated in a Federal Facilities Agreement (FFA). CERCLA response activities have been concluded or are underway at several higher priority areas of concern (AOCs). The FFA initially identified a total of 166 AOCs for further evaluation; however, this was later reduced to 59 AOCs for investigation as part of the CERCLA site screening process. Based on review of available information on the US EPA's and USDA's website pertaining to the BARC NPL, two AOCs are between 1,000 feet and 1,200 feet to the north of the LOD, including BARC 8 –Animal Parasitology Unit (APU) Waste Dump (BARC 8) and EPIC 21 - Open Storage Environmental Photographic Interpretation Center [EPIC] 21. Both sites were investigated and characterized and received no further action determinations from EPA. Based on the information obtained</p>	

Figure Location:

Project Area Site Descriptions

<p>for these two sites, impacts are believed to be isolated to areas approximately 1,000 to 1,200 feet north of the LOD and are unlikely to impact the LOD. However, since the area has been utilized as an agricultural research facility since the 1910s, there is a likelihood that organochlorine pesticides, such as dieldrin, DDT, chlordane, and lindane may be present in soils and sediments within the boundary of the LOD. Further information is warranted, including coordination with USDA and US EPA, prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Watershed:	WAS	
Street Address/Nearest Cross Streets	Northeast interchange of Baltimore Avenue and University Boulevard	
City	College Park	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located in the northeast portion of the Baltimore Avenue (US-1) and University Boulevard (MD-193) interchange, in College Park, Maryland. The surrounding area consists primarily of residential development, which occurred from the 1900s to the 1920s. No records of concern in the vicinity of the LOD that would have an impact on the LOD were identified during this environmental review.

Ranking Rationale Site Summary		
<p>The LOD is located in the northwest portion of the Baltimore Avenue (US-1) and University Boulevard (MD-193) interchange, in College Park, Maryland. The surrounding area consists primarily of residential development, which occurred from the 1900s to the 1920s. Commercial development is located on each side of US-1, and the Paint Branch River is located to the west. Two facilities listed on multiple environmental databases were identified in the surrounding area. The first facility, the MNCPPC Paint Branch Golf Course, was mapped as being located approximately 570 feet west the LOD; however, on further review this site is located over 1,100 feet northwest. The second facility, Jenkins Garage, is located greater than 600 feet south of the LOD. Based on these distances, these facilities are unlikely to have an impact on the LOD.</p>

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Queens Chapel Road (MD 500), east of Eastern Avenue NE, in Mount Rainier, Maryland. The surrounding area is a mix of commercial and residential properties. Development of the surrounding area occurred prior to 1960, as the surrounding area is observed its current configuration in the 1960 aerial photograph. Two facilities of concern were identified. The first facility, a reality office located 335 feet from the LOD, was listed on the OCP database for unspecified purposes. The OCP case remains open. The second facility, a drycleaner located 430 feet from the LOD, was listed on the CERCLIS, FED DRYCLEANERS, RCRA NON GEN, FINDS/FRS, ICIS and SEMS ARCHIVE databases. Environmental impacts appear to have been present at this facility. Although the OCP case associated with the realty office remains open, and impacts appear to have been present at the drycleaner, both of these facilities are located hydraulically downgradient of the LOD and at a significant distance. Thus, impacts to the LOD from the facilities are unlikely.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2	Queens Park Plaza Apartments 2512 Queens Chapel Road Mt Rainier, MD	340	<p>OCP – In 1987, an OCP case was opened. It is unknown whether a release occurred. The case was closed two months later.</p> <p>UST, OCP – Currently a 10,000 gallon heating oil UST is in use at the site. In 1987, an OCP case was opened after the UST failed a tank tightness test. The air leak was identified in the vent pipe of the UST system. The vent pipe along with the product lines were replaced and the UST system passed. Records state that no release or product occurred.</p> <p>Based on a review of historical and current imagery, the UST is believed to be approximately 340 feet north of the LOD.</p> <p>Based on local topography the site appears located upgradient from the LOD.</p>	Low
3	Queens Manor Garden Apartments 4615 27 th Street Mt Rainier, MD	395	<p>UST – Previously five 8,000 gallon heating oil USTs operated at the site. All tanks are permanently out of use and have been removed from the ground. Although the site is listed as 265 feet from the LOD, it measures 395 feet away. Based on local topography the site appears located downgradient from the LOD.</p>	Low
4	Avondale Overlook Apartments 2400 Queens Chapel Road Mt Rainier, MD	315	<p>UST, OCP – There is currently an 8,000 gallon heating oil UST in use at the site.</p> <p>1990 – Several holes were found in a 12,000-gallon heating oil UST onsite. The UST was excavated and removed from the site, along with approximately 80 tons of impacted material. MDE requested that soil samples be collected; however, there was no record of the sampling in the files provided by MDE. The case was closed approximately 6 months later. An 8,000-gallon heating oil UST was installed in place of the former UST.</p> <p>2018 – MDE received a notification that the 8,000-gallon heating oil UST had failed a tightness test. Further investigation identified that the tank system failed due to a bad drain port in the spill catch basin that was not isolated during the tightness test. The drain port was subsequently removed and the tank passed the tightness test. No petroleum was identified to have been released and the case was closed approximately one year later. Based on available imagery and files reviewed the UST is located approximately 230 feet north (upgradient) of the LOD. However, any impacts from the former or current UST are most likely isolated to the property.</p> <p>FINDS/FRS – Minor air permit; no violations were identified during this review.</p>	Low

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2	Mt Rainier Junior High School 30 th Street and Queens Chapel Road Mt Rainier, MD	240	FINDS/FRS – Minor air permit; no violations were identified during this review.	Low
3	2905 Allison Street Mt Rainier, MD	240	FINDS/FRS – Minor air permit; no violations were identified during this review.	Low
4	King Park Plaza Apartments 2600 Queens Chapel Road Hyattsville, MD	200	<p>ERNS – In 2002, 50 gallons of transformer oil was released after the pole the transformer was mounted to was struck by a tractor trailer.</p> <p>UST, OCP – One 8,000-gallon heating oil UST was excavated and removed on December 20, 2006, along with approximately 315 tons of petroleum impacted soil from the excavation on the northeast side of the facility. Three confirmation soil samples were taken from below the grade of the former UST (approximately 20 feet below grade) and analyzed for TPH-DRO (18 mg/kg to 661 mg/kg and BTEX (all non-detect). The detected concentration of TPH-DRO at 661 mg/kg, slightly exceeded its corresponding MDE non-residential action level of 620 mg/kg. Based on the analytical results, MDE granted closure to the case. Based on a review of current and historical imagery, the former UST is approximately 220 feet north (downgradient) of the LOD.</p>	Low
5	Pepco 6430 30 th Street Hyattsville, MD	265	OCP – In 2003, an OCP case was opened. A release and cleanup actions occurred and was closed a year later. The case most likely was result of surficial spill.	Low
6	Queens Manor Garden Apartments 4615 27 th Street Mt Rainier, MD	350	UST – Previously, five 8,000 gallon heating oil USTs operated at the site. All tanks are permanently out of use and have been removed from the ground. Although the site is listed as 200 feet from the LOD, it measures 350 feet away. Based on local topography the site appears located downgradient from the LOD.	Low
7	Queens Chapel Manor Apartments 4700 30 th Street Hyattsville, MD	160	<p>UST, OCP – In 1996, an OCP case was opened for the excavation and removal of an 8,000-gallon UST. Approximately 39 tons of impacted soil was excavated and removed from the site. Confirmation samples were collected and analyzed for TPH-DRO (5.9 mg/kg and 7.3 mg/kg) and naphthalene (non-detect and 0.042 ug/kg). Based on the analytical data, MDE granted closure approximately two months later. Based on the information, any residual impacts are most likely isolated to the site.</p> <p>FINDS/FRS – Minor air permit; no violations were identified during this review.</p>	Low
8	2503 Allison Street Mt Rainier, MD	330	FINDS/FRS – Minor air permit; no violations were identified during this review.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Queens Chapel Road (MD 500), between 30th Street and Buchanan Street, in Mount Rainier, Maryland. The surrounding area is a mix of commercial and residential properties, which began prior to 1963. The surrounding area is observed to be in its current configuration by 2017. There are several database listings in the vicinity of the LOD. Several sites did not have releases or are located at a distance from the LOD where impacts are unlikely. Two apartment complexes and spills within 225 feet of the LOD were identified as having registered former and current USTs, OCP cases, and reported releases; however, based on a review of available information provided by MDE through a PIA request, impacts are either isolated to the properties or the sites are hydraulically downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

A concrete slab was encountered beneath the UST so sidewall soil samples were collected. Five soil samples were collected to evaluate the presence/ absence of residual petroleum impact. The samples consisted of four sidewall soil samples from the UST excavation at approximately 10 feet bgs and one bottom soil sample from beneath the product piping at approximately 3 feet bgs. All post-excavation soil sampling results were below the Department's non- residential soil cleanup standards for volatile organic compounds The site was listed at being 100 feet east of the LOD; however, based on further review, the form USTs were at least 240 feet east of the LOD. Based on local topography the site appears located upgradient from the LOD.	Low

12	Crown Station 3201 Queens Chapel Road Mt Rainier, MD (Cont.)	345	<p>(7.4 mg/kg), ethylbenzene (7.6 mg/kg), xylenes (34.7 mg/kg).</p> <p>2002 – Four UST were excavated and removed from the site and four new USTs were installed in their place. A due diligence investigation was conducted in 2004 as part of property transfer. Based on the finding a larger environmental investigation was performed that included the installation of four groundwater monitoring wells shortly thereafter. BTEX concentrations in the groundwater samples collected on November 19, 2004 ranged from 18.720 ug/l in MW-1 to 160,641 ug/l in MW-3. MTBE concentrations ranged from 280 ug/l in MW-1 to 5.100 ug/l in MW-2. TBA concentrations ranged from below the quantitation limit (BQL) in MW-1 to 700 ug/l in MW-2. TPH-GRO concentrations ranged from 14 mg/l in MW-3 to 40 mg/l in MW-2. Confirmatory sampling of the monitoring wells occurred on January 4, 2005. The BTEX concentrations ranged from 18,820 ug/l in MW-1 to 112,990 ug/l in MW-2. MTBE concentrations ranged from BQL in MW-1 to 9,200 ug/l in MW—3. TBA concentrations ranged from BQL in MW-1 to 1,300 ug/l in MW-2. TPH-GRO concentrations ranged from 3.6 mg/l in MW-3 to 24 mg/l in MW-2. Groundwater was determined to flow to the north, away from the LOD. The monitoring wells sampled a total of six times between November 2004 and May 2006. Concentrations of benzene, toluene, ethylbenzene, and xylene and MTBE declined in all three monitoring wells during that time period. Therefore, MDE granted closure to the case.</p>	Low
13	Queens Manor Apts 4700 30 th Street Hyattsville, MD	480	<p>UST, OCP – In 1996, an OCP case was opened for the excavation and removal of an 8,000-gallon UST. Approximately 39 tons of impacted soil was excavated and removed from the site. Confirmation samples were collected and analyzed for TPH-DRO (5.9 mg/kg and 7.3 mg/kg) and naphthalene (non-detect and 0.042 ug/kg). Based on the analytical data, MDE granted closure approximately two months later.</p> <p>FINDS/FRS – Minor air permit.</p> <p>Based on local topography the site appears located upgradient from the LOD.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located in the along the western side Queens Chapel Road (MD 500), immediately south of Chillum Road (MD 501), in Mount Rainier, Maryland. The surrounding area is a mix of commercial and multifamily residential complexes, which began prior to 1963. Commercial development in the area continued through 2009, when the surrounding area was observed in its current configuration. There are 16 database listings in the vicinity of the LOD. Of these, 13 sites did not have releases or are located at a distance from the LOD where impacts are unlikely. Two gas stations and an apartment complex, all within 250 feet of the LOD, have registered former and current USTs, OCP cases and reported releases; however, based on a review of available information provided by MDE through a PIA request, impacts are either isolated to the properties or the sites are downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

City	Hyattsville
County	Prince George's
Type of property	ROW
Ranking Rationale Site Summary	
<p>The LOD is located along the northern side of Queens Chapel Road (MD 500), northeast of Ager Road, in Hyattsville, Maryland. The surrounding area is primarily commercial developments. The Anacostia River runs east/west, south of the LOD. Development of the surrounding area is observed to begin prior to 1963, and is observed in its current configuration by 2005. Two gas stations were identified in close proximity to the LOD. One gas station, Mobil, is located within the southern portion of the LOD. The facility has four active and four historical USTs registered to it. A small release from a product line was discovered and addressed in 1981, as well as 550-gallon used oil UST was excavated and removed from the site in 1999. The site currently has one open OCP case. According to available information provided by MDE through a PIA request, in May 2019, an MDE inspector discovered gasoline in the sump system. The gasoline overflowed the sump and had impacted the subsurface material. Product thicknesses of 0.10 feet were identified in several of the tank field monitoring wells. MDE requested that a site investigation be conducted to determine the extent of the impacts. A proposed work plan was submitted in September 2020 that includes soil boring and groundwater sampling. The case is still pending and extent of the impacts are unknown at this point. The second gas station, Shell, is approximately 325 feet northeast of the LOD and is believed to slightly hydraulically crossgradient of the LOD. Currently, the site operates three USTs, ranging in size from 12,000 to 15,000 gallons. In 1998, Three monitoring wells were installed and sampled along with two existing monitoring wells in the tank field to determine if groundwater was impacted after a leak was detected in a dispenser and product drained through gravel trenches to the tank field and over 7,000-gallons of impacted water had been pumped out. The wells were sampled biannually. Analytical results from the last round of groundwater sampling, conducted in July 1998, detected concentrations of MTBE, TPH-GRO and total BTEX. Groundwater was determined to flow towards the southeast. In 2017, three 10,000-gallon USTs along with product lines and dispensers were excavated and removed from the site.</p>	

Figure Location:

SITE ID: **WAS-2032-HIGH**

Project Area Site Descriptions

<p>Field screening from the tank field soil material using a photo-ionization detector (PID) recorded a maximum of 120 ppm in soils approximately 8 feet below grade surface (bgs). Impacted soils were removed from the tank field to a depth of approximately 16 feet bgs for the installation of new USTs. A total of 1,806.51 tons of petroleum impacted soil and 17,072 gallons of petroleum impacted water were removed for proper off-site disposal. Twenty soil samples were collected to evaluate the presence/absence of residual petroleum impact. The soil samples were analyzed for VOCs, naphthalene, and TPH-DRO/GRO. All soil sampling results were non-detect or below MDE's non-residential soil action levels. The case received closure from MDE approximately 3 months later. Based on the historical environmental issues at both of these gas stations, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along Queens Chapel Road (MD 500), southwest of Hamilton Street, in Hyattsville, Maryland. The surrounding area is primarily commercial properties north of Queens Chapel Road, and forested land and the Anacostia River south of Queens Chapel Road. Development of the surrounding began prior to 1963, and appears in its current configuration by 2005. The area surrounding the LOD includes two dry cleaners, two gas stations and two former gas stations, two auto shops and several other commercial buildings with database listings. All but one listing either do not involve a release or were located at a sufficient distance from the LOD where impacts are unlikely. The lone exception is a Shell gas station located approximately 145 feet to the northeast which is believed to slightly hydraulically crossgradient of the LOD. Currently, the site operates three USTs, ranging in size from 12,000 to 15,000 gallons. In 1998, Three monitoring wells were installed and sampled along with two existing monitoring wells in the tank field to determine if groundwater was impacted after a leak was detected in a dispenser and product drained through gravel trenches to the tank field and over 7,000-gallons of impacted water had been pumped out. The wells were sampled biannually. Analytical results from the last round of groundwater sampling, conducted in July 1998, detected concentrations of MTBE, TPH-GRO and total BTEX. Groundwater was determined to flow towards the southeast. In 2017, three 10,000-gallon USTs along with product lines and dispensers were excavated and removed from the site. Field screening from the tank field soil material using a photo-ionization detector (PID) recorded a maximum of 120 ppm in soils approximately 8 feet below grade surface (bgs). Impacted soils were removed from the tank field to a depth of approximately 16 feet bgs for the installation of new USTs. A total of 1,806.51 tons of petroleum impacted soil and 17,072 gallons of petroleum impacted water were removed for proper off-site disposal. Twenty soil samples were collected to evaluate the presence/absence of residual petroleum impact. The soil samples were analyzed for VOCs, naphthalene, and TPH-DRO/GRO. All soil sampling results were non-detect or below MDE's non-residential soil</p>

action levels. The case received closure from MDE approximately 3 months later. Based on the proximity of this Shell gas station with known historical releases, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.

The soil adjacent to the line was hand augered, which showed saturated soils 8” to 10” below the line. The case was closed approximately three months later.</p> <p>1999 – A 550-gallon used oil UST was excavated and removed from the ground. The tank was observed to be in good condition and no staining or petroleum odor was observed. Soils approximately 2 feet below the grade of the from tank were screened with a PID that was recorded at 11.8 ppm.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along southern side of Queens Chapel Road (MD 500), northeast of Hamilton Road, in Hyattsville, Maryland. The surrounding area is a mix of commercial and residential properties, with some forested land southwest of the LOD. Development of the surrounding began prior to 1963, and was observed in its current configuration by 1994. Eight sites of concern listed on one or more environmental database were identified in the surrounding area. The most concerning is a Shell gas station located 185 feet west of the LOD. This gas station has a history of environmental issues; however, based on site-specific information provided by MDE through a PIA request, the groundwater flow direction is to the southeast. Based on this groundwater flow direction, the historical impacts at this gas station are unlikely to impact the LOD. The remaining seven sites of concern either did not involve a release or were located at a sufficient distance from the LOD where impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
The LOD is located along the southern side of Queens Chapel Road (MD 500), approximately 230 feet northeast Hamilton Road, in Hyattsville, Maryland. The surrounding area is a mix of commercial and residential developments, which occurred prior to 1963. The surrounding area is observed to be in its current configuration by 1994. Seven facilities listed on one or more environmental databases were identified. A facility utilizing a 10,000-gallon heating oil UST is located upgradient of the LOD; however, the UST was determined to be located approximately 445 feet from the LOD. The remaining six facilities of concern were all located downgradient to crossgradient of the LOD. Based on distance or hydraulic direction, impacts to the LOD from these facilities are unlikely.

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1, 2	Sacred Heart Home 5805 Queens Chapel Road Hyattsville, MD	0	<p>UST – Previously, an 8,000 gallon heating oil UST was in use at the LOD. The tank is permanently out of use and was removed from the ground in July 1992.</p> <p>OCP – There have been four OCP opened at this site; however, the first three all appear associated with a 1987 tank test failure as they each were opened within the time period. In 1987, the 8,000-gallon UST failed a tightness test due to a leak in the supply line, return line and vent line. A visible leak was observed in the manway for tank access. The visible leak was repaired and additional cathodic protection added to each of the lines. The system was then retested and passed. Based on the records provided by MDE, the released product in the manway did not impact the surrounding soils. The 4th OCP case is dated the month prior to the removal of the 8,000-gallon heating oil UST, and is therefore likely associated with that tank closure. All cases have been closed.</p> <p>FINDS/FRS – Minor air permit.</p>	Low
3	Liberty Transport Manorwood Road & Queens Chapel Road Hyattsville, MD	405	OCP – In 2003, an OCP case was opened due to a vehicular accident. A release and cleanup actions occurred, and the case was closed three months later. Based on local topography the site appears to be located upgradient from the LOD.	Low

Street Address/Nearest Cross Streets	Along Queens Chapel Road, south of Manorwood Drive	
City	Hyattsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along Queens Chapel Road (MD 500), south of Manorwood Drive, in Hyattsville, Maryland. The western side of the LOD at the southern end extends further south along the western side of Queens Chapel Road. The surrounding area is primarily residential, which began prior to 1963. The surrounding area is observed to be in its current configuration by 1994. Two records of concern were identified that warrant further investigation prior to intrusive groundwork to determine if environmental media within the LOD have been impacted. The first record is an OCP case associated with a vehicle accident potentially occurring within the northern end of the LOD, which resulted in a release and subsequent cleanup. Additional records regarding this case was requested from MDE; however, MDE replied stating no records were available. The second record is an ERNS case, located 370 feet hydraulically upgradient from the LOD, where a heating oil AST leaked and impacted an area of soil approximately 5'x5' in size. The remaining fuel in the AST was pumped out, but no information was available regarding if or how the impacted soils were addressed. Additional records regarding this case was requested from MDE; however, MDE replied stating no records were available. Thus, impacts to the LOD cannot be ruled out. Further investigations are warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Liberty Transport Manorwood Road & Queens Chapel Road Hyattsville, MD	0	OCP – In 2003, an OCP case was opened due to a vehicular accident. A release and cleanup actions occurred, and the case was closed three months later. Based on the location description, the incident may have occurred within the LOD.	High
2, 3	Sacred Heart Home 5805 Queens Chapel Road Hyattsville, MD	65	<p>UST – Previously, an 8,000 gallon heating oil UST was in use at the LOD. The tank is permanently out of use and was removed from the ground in July 1992.</p> <p>OCP – There have been four OCP opened at this site; however, the first three all appear associated with a 1987 tank test failure as they each were opened within the time period. In 1987, the 8,000-gallon UST failed a tightness test due to a leak in the supply line, return line and vent line. A visible leak was observed in the manway for tank access. The visible leak was repaired and additional cathodic protection added to each of the lines. The system was then retested and passed. Based on the records provided by MDE, the released product in the manway did not impact the surrounding soils. The 4th OCP case is dated the month prior to the removal of the 8,000-gallon heating oil UST, and is therefore likely associated with that tank closure. All cases have been closed.</p> <p>FINDS/FRS – Minor air permit; no violations were identified during this review.</p> <p>Based on local topography the site appears to be cross- to downgradient from the LOD.</p>	Low
4	3803 Nicholson Street Hyattsville, MD	370	<p>ERNS – In 1993, an unknown amount of No. 2 fuel oil was released from an AST due to corrosion, impacting an area of soil approximately 5' x 5' in size. The remaining fuel in the AST was pumped out, but no information was available regarding if or how the impacted soils were addressed. Additional records regarding this case was requested from MDE; however, MDE replied stating no records were available.</p> <p>Based on local topography the site appears to be located upgradient from the LOD.</p>	Moderate

Street Address/Nearest Cross Streets	Along Queens Chapel Road, between Nicholson Street and Manorwood Drive	
City	Hyattsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along Queens Chapel Road (MD 500), between Nicholson Street and Manorwood Drive, in Hyattsville, Maryland. The surrounding area is primarily residential, which began prior to 1963. The surrounding area is observed to be in its current configuration by 1994. Two records of concern were identified that warrant further investigation prior to intrusive groundwork to determine if environmental media within the LOD have been impacted. The first record is an OCP case associated with a vehicle accident near the southern end of the LOD, which resulted in a release and subsequent cleanup. Additional records regarding this case was requested from MDE; however, MDE replied stating no records were available. The second record is an ERNS case, located 165 feet hydraulically upgradient from the LOD, where a heating oil AST leaked and impacted an area of soil approximately 5'x5' in size. The remaining fuel in the AST was pumped out, but no information was available regarding if or how the impacted soils were addressed. Additional records regarding this case was requested from MDE; however, MDE replied stating no records were available. Thus, impacts to the LOD cannot be ruled out. Further investigations may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along Queens Chapel Road (MD 500), between Nicholson Street and Oglethorpe Drive, in Hyattsville, Maryland. The southern end of the LOD extends further east, away from Queens Chapel Road. The surrounding area is primarily residential, which began prior to 1963 and is observed in its current configuration by 1994. One records of concern, an OCP case located 105 feet from the LOD, was identified that warrants further investigation prior to intrusive groundwork to determine if environmental media within the LOD have been impacted. This record involved a leaking heating oil AST which impacted an area of soil approximately 5'x5' in size. The remaining fuel in the AST was reportedly pumped out, but no information was available regarding if or how the impacted soils were addressed. The remaining records are unlikely to have an impact on the LOD based on their distance or hydraulic directions.</p>

Ranking Rationale Site Summary		
The LOD is located primarily within a center median of Queens Chapel Road (MD 500), between Oglethorpe Street and Oliver Street, in Hyattsville, Maryland. The northeastern end of the LOD extends east and west, across Queens Chapel Road. The surrounding area is primarily residential, which began prior to 1963. The surrounding area is observed to be in its current configuration by 1994. Four petroleum release incidents were identified, with the closest being a SPILLS incident involving a release of No. 2 fuel oil to the ground surface from a corroded AST. The remaining SPILLS or OCP cases that involved petroleum releases occurred greater than 600 feet from the LOD. Further, all release incidents occurred either cross or downgradient from the LOD. Based on distance and hydraulic direction, impacts to the LOD from these release incidents are unlikely.

Project Area Site Descriptions

LOD ID: WAS-2043	Site Rank: Low	Figure Location: 
Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Center median of Queens Chapel Road, southwest of East West Highway	
City	Hyattsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is primarily located in the center medium of Queens Chapel Road (MD 500), approximately 630 feet southwest of East West Highway (MD 410) in Hyattsville, Maryland. The surrounding area is a mix of commercial and residential developments. Development of the surrounding area begin prior to 1963, and is observed in its current configuration by 2005. Fifteen facilities located between 35 feet and 645 feet from the LOD were listed on one or more of the following databases: OCP, SPILLS, UST, RCRA Generator, VCP, LUC, SHWS, Drycleaner and Fed Drycleaner. Of these, only two facilities were located within 300-feet of the LOD. The closest facility, the United Methodist Church located adjacent to the west, was listed on the UST, OCP and SPILLS databases. In 2012, an 8,000-gallon heating oil tank was removed. The OCP record associated with this UST closure states a release had not occurred. An older OCP case was opened in 1987 for unknown reasons, but the case was closed one month later indicating it was minor in nature. The SPILLS case involved the release of 15 gallons of hydraulic fluid from an electrical transformer, which was contained with the transformer vault. Based on this information, impacts to the LOD from the church are unlikely. The second facility, a residence located 260 feet downgradient of the LOD, had an OCP case opened in 1991 for unknown reasons; however, the case was closed within one week. Of the facilities beyond 300 feet from the LOD, the only notable case is a former drycleaner that is listed on the Drycleaners, FED DRYCLEANER, SHWS, VCP, LUC, and RCRA Generator databases. However, this facility has been issued a No Further Action (NFA) determination and the land use controls (LUCs) are limited to the type of operations that may occur at the facility. Based on the distance (510 feet), impacts to the LOD from this former drycleaner are unlikely. The remaining facilities are not expected to have any impact on the LOD based on either their case status, distance or hydraulic direction.</p>

Ranking Rationale Site Summary		
<p>The LOD is located primarily within a center median of Queens Chapel Road (MD 500), immediately southwest of East West Highway (MD-410). Portions of the LOD near the center extend east and west, across Queens Chapel Road. The surrounding area is a mix of commercial and residential developments. Development of the surrounding area is observed to begin prior to 1963, and is viewed in its current configuration by 2017. Six facilities listed on one or more environmental databases were identified. Of these, all but one facility was located at a distance of 455 feet or greater from the LOD. The lone exception, an OCP case, was located adjacent to the southeast side of the LOD. This OCP case was opened in 1991 for unknown reasons. It is also unknown whether a release occurred; however, the case was closed within a week. A request to MDE for additional information was returned stating no files were available. Due to the proximity of this OCP case, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

It is also unknown whether a release occurred; however, the case was closed within a week. No additional records were available from MDE. Based on local topography the site is located crossgradient from the LOD; however, the site is located immediately adjacent to the LOD.	Moderate
2	MD SHA BRIDGE MD 500 over Northwest Branch Hyattsville, MD	~6,500	FINDS/FRS, RCRA CESQG – Lead generation, likely associated with overpass maintenance, no violations noted. Note: Although the database mapped this record as being 55 feet from the LOD, actual distance is approximately 6,500 feet.	Low
3	4112 East West Hwy Hyattsville, MD	455	ERNS – In 1994, half a pint of oil was leaked as an oil fill line was being disconnected. Absorbent was used to clean up the release. Based on local topography the site appears located downgradient from the LOD.	Low
5	550 Belcrest Road Hyattsville, MD	560	SPILLS – In 2015, 15 gallons of hydraulic oil was released from a transformer into the transformer vault. The spill was cleaned up by the owners of the transformer (PEPCO). Based on local topography the site appears located crossgradient from the LOD.	Low
6	6202 41 st Ave Hyattsville, MD	620	SPILLS – In 2016, one gallon of sewage was spilled from a pipeline due to a blockage in the pipeline from paper/rags. The clogged was removed from the pipeline. Sewage is not considered a contaminant of concern for this evaluation.	Low
4,7	Petco Store 3704 East West Hwy Hyattsville, MD	660	FINDS/FRS – Conditionally exempt small quantity generator (CESQG) listing, no violations noted. Based on local topography the site appears located crossgradient from the LOD.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1963	Queens Chapel Road visible, though as a 2-lane road. Residential developments are located to the south and east, while a church is located to the north.	Aerial
1988	Queens Chapel Road has been expanded. Commercial development observed to the north and west of the LOD.	Aerial
2017	Expansion of commercial building west of the LOD, completion of a parking garage northwest of the LOD, surrounding area is observed to be in its current configuration.	Aerial

Ranking Rationale Site Summary	
<p>The LOD is located along the central median of the Kenilworth Avenue (MD 201), at 48th Street, in Bladensburg, Maryland. The surrounding area is a mix of industrial and commercial; a self-storage facility and auto repair shop are located to the east, and an industrial area with several warehouses and outdoor storage to the west. Commercial development took place mostly by 1960, the self-storage facility was built in the 1970's. Twenty-nine sites were identified in the environmental database in the vicinity of the LOD. Of those sites identified, twenty of them had former/active USTs, OCP cases, or reported releases. It is believed that the majority of the sites are either crossgradient/ downgradient of the LOD or at a sufficient distance where impacts to the LOD are unlikely. One site, Ernest Maier Inc., is directly west of the LOD and had two former USTs, one 10,000-gallon diesel #2 UST closed in-place in 1991 and one 20,000-gallon diesel #2 UST excavated and removed from the site in 2007. Based on available data, PID readings from the bottom of the excavation of the 20,000-gallon diesel #2 UST ranged from 200 to 523 ppm. An unknown amount of impacted soil was excavated and disposed of offsite. A soil sample was collected approximately 2 to 3 feet below the former UST at each end. TPH-DRO was detected at 38 mg/kg and 64 mg/kg. There are no records of sampling soil or groundwater with the UST closed in-place, as well as the exact locations of the former USTs on the site are unknown. Due to the limited information available on this adjacent site, impacts to the LOD cannot be ruled out. Therefore, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	7-Eleven #27670 4199 Kenilworth Ave.	205	OCP, SPILLS – The site has a 1989-1991 OCP case which does not indicate a release or cleanup. There are two Spills records for a 2013 sanitary sewer release to a storm drain.	Low
2,5	Al Gleeson Electric, Inc. 4710 Upshur St.	295	OCP, UST – This site has two historic USTs: both were 2,000-gallon gasoline tanks, one installed in 1979 one in 1975; both were removed in 1999. The 1999-2001 OCP tank closure case indicate a release and cleanup occurred. The site appears crossgradient from the LOD.	Low
3,4	Ernest Maier Inc., 4217 47 th St. 42150-4217 47 th St.	80	OCP, UST – This site had two historic diesel USTs, 1991 - A 10,000-gallon diesel #2 UST was closed in-place. There are no records of sampling soil or groundwater with the UST closure. 2007 - A 20,000-gallon tank installed in 1989 and removed in 2007. PID readings from the bottom of the excavation ranged from 200 to 523 ppm. Approximately tons of impacted soil was disposed of offsite. A soil sampled was collected approximately 2 to 3 feet below the grade of the former UST at each end. TPH-DRO was detected at 38 mg/kg and 64 mg/kg.	Moderate
6,7	United Rentals Branch 385, Rental Tools & Equipment, Rental Tools & Equipment Co, United Rentals Branch 383 4900 Upshur	325	ERNS, FINDS/FRS, OCP, RCRA SQG, UST – This site has two historic USTs, a 2,000-gallon diesel and a 2,000-gallon gasoline; both were installed in 1968 and removed in 1993. Neither a 1988 OCP case or a 1993-1996 case indicate a release or cleanup occurred. The site has a 2002 ERNS record indicating a caller reported that a construction company at the site cleans heavy equipment and was disposing diesel fuel, hydraulic fuel, and cleaning solution water into regular trash. The site is a RCRA small quantity generator of a variety of wastes and has no record of violations.	Low
8	4199 Kenilworth Ave.	305	SPILLS – Sanitary sewer line break in 2013.	Low

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
9,11	Bladensburg Services Center, PG County Schools Bus Lot, Prince George's Co Schools Bus Lot, Bus Lot 4800 Varnum St.	310	FINDS/FRS, OCP, UST – This site has one historic UST and two existing USTs. The historic tank was a 500-gallon used oil tank installed in 1971 and removed at an unknown date. The existing tanks are a 10,000-gallon diesel tank installed in 1986 and a 10,000 gallon-diesel tank installed in 1984. The site has three OCP cases, none indicate a release/cleanup occurred. A 1984-1985 case and a 1991 case provide no information, a 1996 case was for a surface spill of motor/lube oil from a UST.	Low
10	Bladensburg Transmission, 4726 Annapolis Rd.	320	OCP – This site had an OCP case opened in 1987 and closed in 1995; no release or cleanup is documented.	Low
12	Automatic Transmission Shop, Tireland 4728 Annapolis Rd.	330	OCP – This site has two OCP cases, one from 1988 and one from 1995; neither indicate a release or cleanup occurred.	Low
13	Maryland SHA Bridge 1602500 MD 201 over MD 450, Kenilworth Ave. & Annapolis Rd.	355	FINDS/FRS, RCRA LQG, SPILLS – This bridge is a RCRA large quantity generator of lead with no records of violation.	Low
14	Unknown Oil Spill Corner of Kenilworth Ave & Upshur ST.	360	OCP – This site has a closed 1987-1989 OCP case that does not indicate a release or cleanup occurred.	Low
15	Ernest Maier – Block@Masonry@ Hardscapes, Maier, Erst, Inc. 4700 Annapolis Rd.	80	FINDS/FRS – This site operates under a minor air permit and a NPDES non-major permit.	Low
16,21	Evans Printing 4208 48 th St.	400	FINDS/FRS, RCRA SQG – This site is a RCRA small quantity generator of several hazardous wastes; it has no records of violations.	Low
17,31	Former Shell t/a Q-Card #408 4201 Kenilworth Ave.	410	FINDS/FRS, ICIS, OCP, UST – This site has nine historic USTs and three existing tanks. Historic tanks include five 4,000-gallon gasoline tanks (installation dates unknown) as well as two 4,000-gallon diesel tanks, a 550-gallon UST and a 550-gallon used oil tank (all four installed in 1975). All nine tanks were removed in 1995. A 1995-1996 tank closure case and a 2010-2013 OCP case for well/groundwater contamination with motor/lube oil tanks both indicate a release and cleanup occurred. Both a 2004 OCP compliance inspection case and a 1995-1996 OCP case for new installation of motor/lube oil tanks indicate no release or cleanup occurred,	Low
18,23	Bladensburg Fire Department Co. #9 4213 Edmonston Rd.	460	OCP, UST – This site has one historic UST, a 2,000-gallon diesel tank that was installed in 1974 and removed in 2000. A 2000-2000 OCP case for the tank closure indicates a release and cleanup occurred.	Low

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
19,20	Louis Lohman Property, Carlos Terrones Property 4212 Edmonston Rd.	470	OCP, UST – This site has one historic UST, a 2,000-gallon gasoline tank installed in 1967 and removed in 2014. A 1999-2014 OCP case for the closure states no release occurred.	Low
22	4110 Edonston Rd	490	HMIRS – A small (0.25-gallon) spill of fuel oil occurred during unloading in 1999 and was cleaned up.	Low
24,28,34	Alejo Lopez, 4812 Webster St	495	OCP, SPILLS – This site has two historic USTs: a 2,000-gallon gasoline and a 4,000-gallon kerosene tank, both installed in 1966 and removed in 1991. Aa 1991-1998 OCP tank closure case indicated a release and cleanup occurred. There are two Spills records for a 5-gallon leak of hydraulic oil from a truck in 2020.	Low
25,26	Overton & Ogburn Associates Inc 4626 Annapolis Rd.	495	FINDS/FRS, RCRA SQG – The site is a RCRA small quantity generator of ignitable waste with no records of violations.	Low
27	Shell Gas Station, 4801 Annapolis Rd; Crown Stations MD-114, Crown MD-114, Shell Station MD-114	505	FINDS/FRS, ICIS, OCP, RCRA SQG, UST – The site has five historic USTs and two USTs currently in use. The historic USTs include two 6,000-gallon and two 8,000-gallon gasoline tanks installed in 1978 and removed in 2002, as well as a 1953 heating oil tank installed in 1953 and removed in 1998. The existing tanks are both 15,000-gallon gasohol tanks. A 2001-2007 OCP case for tank closure and a 1994-2002 OCP case for soil contamination with motor/lube oil both indicate a release and cleanup occurred. The site is a RCRA small quantity generator of benzene with no records of violation. It operated under an air permit and an individual NPDES permit.	Low
29	Delicias La Chocita 4800 Annapolis Rd.	530	FINDS/FRS – This site is on the state master list.	Low
30	Levy, Herbert Company 4802 Webster St.	530	FINDS/FRS – The site operated under a minor air permit.	Low
32	Lopez Property 4800 Webster St.	550	OCP, UST – This site has three historic USTs including a 3,000-gallon diesel, a 2,000-gallon gasoline, and a used oil tank of unknown capacity. All were removed in 1991, dates of installation are unknown. A 1990-2009 OCP case for dumping indicated a release and cleanup occurred, a 1991 case does not indicate any release or cleanup.	Low

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the northern side of Annapolis Road (MD 450), in 71st Avenue's center median, in Hyattsville, Maryland. The LOD is surrounded by residential development to the north, east and west. A gas station is located south of the LOD, directly across Annapolis Road. In 2003, a sheen was observed in a groundwater collected from a monitoring well. MDE requested that a Phase II investigation be conducted to determine the extent of the impacted area at the gas station. Five soil borings/monitoring wells were installed and sampled. Free product was observed in the northeast portion of the site. Additional soil boring/groundwater samples were collected from four points surrounding the monitoring wells, with no additional free product encountered. Based on the result of the investigation, it was concluded that impacted material was believed to isolated to the property; however, groundwater flow was inferred to flow to the north, towards the LOD, and impacted groundwater could have potentially migrated into boundaries of the LOD since 2004. Additionally, a drycleaner is located approximately 265 feet southwest (potentially upgradient) of the LOD. A request was submitted to MDE for further information on the drycleaner; however, MDE was unable to identify any files. Based on the upgradient proximity of the gas station with known historical environmental issues and a drycleaner, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Annapolis Road (MD 450), east of 71st Avenue, in Hyattsville, Maryland. The LOD is mostly surrounded with residential development, with a Catholic school located south of the eastern portion of the LOD and some commercial development further to the west. Development of the area began in the 1940s to 1960s timeframe and continue through 2008, when the surrounding area was observed in its current configuration. An OCP case was opened in July 1998 at a restaurant facility approximately 50 feet south of the LOD. According to available records a petroleum release of unknown volume occurred that was addressed/cleaned-up, and the case was closed approximately 3 weeks later. There are no records of any UST being registered to this restaurant facility. A PIA request was submitted to MDE for the OCP case. Unfortunately, MDE stated that no files were available. Due to lack of information relating to this release, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along East West Highway (MD 410), between 46th and 47th Avenues, in Riverdale Park, Maryland. The surrounding area is a mix of commercial and residential developments. Development of the surrounding area is observed to begin prior to 1963, and is observed in its current configuration by 2005. Although there are 11 sites with database listings in the vicinity of the LOD, all either didn't involve releases or are located at a sufficient distance from the LOD where impact to the LOD are unlikely. The closest site, a residence located 190 feet west of the LOD, had an ERNS case due to the release of 100 gallons of no. 2 fuel oil from an AST. According to available information provided in the environmental database report, the responsible oil company used absorbent pads to clean up the material. Based on local topography the site appears located downgradient from the LOD. Thus, impacts to the LOD are unlikely.</p>

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Riggs Road (MD 212), west of the Red Top Road, in Hyattsville, Road. The surrounding area is a mix of commercial and residential developments. Residential development of the surrounding area began prior to 1949, while commercial development began 1971. The surrounding area is observed in its current configuration by 1988. A fire station, located directly west of the LOD, had a 4,000-gallon gasoline UST excavated and removed in 1984. The UST was found to be in good condition and only a small amount of impacted material was encountered around the vent pipe, which was addressed. A new 4,000-gallon UST was installed in its place, which was subsequently excavated and removed in 2000. The UST was found to be in good condition and no impacted soil or odors were observed in the excavation. A PID reading taken from the approximately 2 feet below the grade of the UST was recorded at 3.3 ppm. A soil sample was collected and analyzed for TPH-GRO, which was non-detect. The excavation was backfilled and the case was closed shortly thereafter. Based on the information available for review, impacts to the LOD are unlikely.</p>

LOD ID: WAS-2059	Site Rank: High	Figure Location: 
Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	South side of Chillum Drive, east of Sargent Road	
City	Hyattsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Chillum Drive (MD 501), east of Sargent Road, in Hyattsville, Maryland. The surrounding area is observed to be a mix of commercial and residential properties. Residential development began in the 1940s, and the surrounding area is observed in its current configuration by 2005. A former Voluntary Cleanup Program (VCP) site known as Sargent Road Shopping Center that formerly had a dry-cleaning company situated in the central portion of the shopping center is approximately 130 feet to the north/northwest of the LOD. According to available information found on MDE's LRP website, environmental investigations were conducted at the property 2006. The reports identified tetrachloroethene (PCE) in the soil and groundwater beneath the property, which may have resulted from dry cleaning operations, which occurred on site from 1963 to 2004. Woodmont Properties, Inc. submitted a VCP application package in June 2006 seeking a No Further Requirements Determination (NFRD), which MDE issued in December 2006, but with stipulations on use of the property, prohibition on the use of groundwater beneath the property, and requirements for a health and safety plan during future construction-related activities on the property. According to the environmental reports, groundwater flow direction beneath the property is to the south and southeast, towards the LOD. Thus, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Hamilton Street, 70 feet east of 35th Place, in Hyattsville, Maryland. The surrounding area is a mix of commercial and residential developments. Development of the surrounding area begun prior to 1963 and is observed in its current configuration by 1988. Four facilities listed on one or more environmental database were identified. The closest, an OCP case located 140 feet hydraulically crossgradient from the LOD, was associated with a leaking residential heating oil AST. The MDE inspector estimated 0.5 gallons of heating oil was released to the ground surface. A follow-up inspection occurring 6 days later noted new AST and product line installed. The remaining three facilities of concern were located between 395 and 540 feet from the LOD in either a downgradient or crossgradient direction. Based on this, impacts to the LOD from these facilities are unlikely.</p>

County	Prince George's	
Type of property	ROW/private	
Ranking Rationale Site Summary		
<p>The LOD runs east-west, starting from the western side of 38th Avenue across 38th Avenue and through a grassy area between properties 5023 and 5025 38th Avenue, in Hyattsville, Maryland. The surrounding area is primarily residential, which was developed prior to 1963. The adjacent apartment complex along the western side of 38th Street was listed on the UST and OCP databases for the removal of a 5,000-gallon heating oil UST in 1992. Inspection of the pulled tank by an MDE inspector did not find any perforations, and screening of the soils beneath the former UST with a PID identified a maximum reading of only 22.2 ppm. Based on this information, the MDE inspector recommended closure of the OCP case. The remaining flagged facilities were listed at distances beyond 500 feet from the LOD. Based on either case status or distance from the LOD, impacts to the LOD from these facilities are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Chillum Road (MD 501), between 10th Place and Twin Oak Drive, in Chillum, Maryland. The surrounding area is primarily residential with a few commercial properties. Development of the surrounding area started prior to 1949, and was viewed in its current configuration in 2017, following expansion of a commercial property northeast of the LOD. The apartment complex to the west/southwest had four 6,000-gallon heating oil USTs closed in 1999, one for each apartment building. Three USTs were closed via excavation and one via abandonment in-place. Soil screening/sampling beneath the USTs did not identify any impacts of concern, and the OCP case was closed. An additional OCP case was listed 445 feet to the east, but no actual release was reported and the case was closed. Thus, impacts are unlikely.</p>

1, 2, 3, 4, 5, 7, 8	Parker House Apts 1001, 1005, and 1009 Chillum Road / 5610 Parker House Terrace Hyattsville, MD	240 to 670	<p>UST/OCP – In 1999, OCP Case #00-0413PG was opened in relation to the closure of four 6,000-gallon heating oil USTs. Three of the USTs were removed, while one UST was abandoned in-place due to other utility lines passing over the former UST. Examination of the pulled USTs for 1009 Chillum Road and 5610 Parker House Terrace did not reveal any holes or punctures, but the UST associated with 1001 Chillum Road had four 1-inch holes at the bottom of the UST. The UST for 1005 Chillum Road was abandoned in-place. While holes were observed in the UST for 1001 Chillum Road, examination of soils with a PID did not identify impacts (max reading was 23ppm). Two soil samples were collected at the base of each excavation pit and beneath the abandoned in-place UST for TPH-DRO and naphthalene analyses. Naphthalene was non-detect in all soil samples, and TPH-DRO was non-detect in six of the eight samples. The two TPH-DRO detections, 11.8mg/Kg and 14.6 mg/Kg, were well below the MDE Residential Soil Cleanup Standards. Based on this information, the OCP case was closed.</p> <p>FINDS/FRS – Minor air permits, no violations noted.</p> <p>Based on local topography the site appears located upgradient/ crossgradient from the LOD.</p>	Low
6	Leaking Auto Burgess & Chillum Rd Hyattsville, MD	445	<p>OCP – In 1998, an OCP case was opened. No release occurred and the case was closed two years later. Based on local topography the site appears located downgradient from the LOD.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Chillum Road (MD 501), west of 21st Place, in Hyattsville, Maryland. The surrounding area is a mix of residential and commercial properties, which mostly occurred by 1963. The Washington Gas/Chillum Station, located across Chillum Road, is a former natural gas terminal. This terminal had seven USTs ranging in size from 6,000 to 10,000 gallons. In 1990, two 10,000-gallon gasoline USTs and one 8,000-gallon gasoline UST were removed. In 2001, two 6,000-gallon gasoline USTs, one 10,000-gallon gasoline UST and one 10,000-gallon diesel UST were removed. According to a summary report from 2001, the USTs were associated with a fueling area in the northeastern portion of the facility. Approximately 690 tons of petroleum impacted material was excavated and removed from the site along with the USTs. Soil and groundwater investigations indicated that a petroleum groundwater plume was present onsite and moving to the north/northeast towards an adjacent stream, downgradient of the LOD. A free product recovery system was to be implemented onsite; however, only one well was found to have any free product in it and the system was therefore shut down. Based on the site characterization efforts, MDE granted closure to the site in 2002. In addition, while not noted in the database, two large gaseous natural gas ASTs, measuring 303 feet in diameter by 171 feet tall were in operation from the 1930's through 1999. While the address is mapped as 230 feet, the property extends a significant distance along Chillum Road. The former gaseous ASTs are located approximately 275 to 300 feet from the LOD, while the former USTs are likely located between 350 feet from the LOD. A pipeline incident was also reported in 1994. No information was available regarding this incident other than "operating error." This facility also had a 15-gallon release of hydraulic fluid to the surface due to equipment failure. The release was cleaned up. Finally, while currently listed as a RCRA CESQG, the facility was formerly an LQG. While this facility has a long history of storage of petroleum products, it is located hydraulically downgradient of the LOD, and thus is unlikely to have an impact on the LOD.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Rhode Island Avenue (US Route 1), across from Braxton Place, in Hyattsville, Maryland. To the east of the LOD are railroad tracks and an industrial area dating from the 1960's. The general area consists of many automotive services, including body shops, repair shops and car sales. Outside the industrial area is residential development, some developed before 1900. To the south is undeveloped land surrounding the Northwest Branch of the Anacostia River. Nine sites had former and/or active USTs/ASTs, OCP cases or reported spill associated with them. Of these, the Koch Auto Radiator Service, located approximately 60 feet north (upgradient) of the LOD, had a 2,000-gallon gasoline UST installed in 1971 and removed at an unknown date. An OCP associated with the UST removal, and the site is also a RCRA small quantity generator with no record of violations. Based on the local topography, the site is believed to be upgradient of the LOD. A request for additional information was submitted to MDE, but MDE responded stating no files were available. Based on the limited information available on this site, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,3	Koch Auto Radiator Service, Inc. 4728 Rhode Island Ave.	60	FINDS/FRS, RCRA SQG, UST – This auto service shop had a 2,000-gallon gasoline UST installed in 1971 and removed at an unknown date. There is OCP associated with the UST removal. The site is also a RCRA small quantity generator with no record of violations. Based on the local topography, the site is believed to be upgradient of the LOD. Additionally, no files were available from MDE for further review.	High
2,5	E&J Auto Body Inc. 4716 Rhode Island Ave	65	FINDS/FRS, RCRA Non Gen – This auto body shop is a RCRA non generator with no records of violations.	Low
4	Milton's Automotive 4706 Rhode Island Ave.	95	OCP – This auto shop has a 2015-2015 OCP case for dumping with no release/cleanup. The release was most likely was surficial in nature. Thus, impacts are most likely minimal.	Low
6	Earl's Auto Body 4704 Rhode Island Ave.	75	OCP – This site has a 2006 OCP case for dumping, involving release/cleanup. The case was closed within one week. Thus, the release was most likely was surficial in nature and any impacts are most likely minimal.	Low
7	Railroad, Rhode Island Avenue & 41 st St.	125	SPILLS – Three spills records for a 2016 spill of approximately 40 gallons of hydraulic oil onto railroad ballast.	Low
8	Potomac Iron Works 4711 Rhode Island Ave.	190	FINDS/FRS – This site operates under a minor air permit and has a record of a compliance activity.	Low
9	T and D Sheet Metal 4717 Rhose (sic) Island Ave	275	FINDS/FRS – Site operates under a non-major NPDES permit.	Low
10	Marche & Co Inc 4800 Rhode Island Ave	395	OCP, UST – Site had two historic USTs removed in 1991: a 1,000-gallon heating oil tank installed in 1980 and a 1,000-gallon gasoline tank installed in 1970. OCP case from 1991-1997 indicates a release and well/groundwater contamination but no cleanup. Based on the local topography, the site is believed to be upgradient of the LOD. Additionally, no files were available from MDE for further review. Based on the local topography, the site appears crossgradient of the LOD.	Low
11,14, 15	Pats Garage Inc. 4711 42 nd St.	405	FINDS/FRS – This auto repair shop is a RCRA small quantity generator of lead, benzene, and tetrachloroethylene and has no records of violation.	Low
12	Patterson Body & Paint 4715 42 nd Place	450	FINDS/FRS, RCRA SGQ – This auto body shop is a RCRA small quantity generator of ignitable waste with no record of violations. It operates under a minor air permit.	Low
13	GKR Printing 4812 Rhode Island Ave	520	FINDS/FRS – Site operates under a minor air permit.	Low
16	EGC Auto Body Shop 4719 42 nd Place	540	FINDS/FRS – This auto body shop is on the state master list.	Low

17,18	Demers Real Estate, Mills Radiator Shop, formerly Miles Radiator Shop 4802 Rhode Island Ave	575	<p>OCP, UST – This site has eleven historic USTs. One was a 3,000-gallon gasoline tank installed in 1982 and removed in 2002. The other ten were 1,000-gallon gasoline tanks installed at an unknown date and removed in 2006.</p> <p>2002 – One 3,000-gallon gasoline UST was excavated and removed from the site. The tank was observed to be pitted, but not perforations were found. Soil in the excavation was stained and had strong petroleum odor. The area was over-excavated to approximately 3 feet below the grade of the UST. Approximately 19 tons of petroleum impacted soil was transported offsite to be disposed of at a regulated facility. A soil sample was collected and analyzed for TPH, BTEX and TPH. Ethylbenzene was detected at 895 ug/kg and TPH at 144 mg/kg in the excavated soils. A petroleum constituents were non-detect in the confirmation sample collected from the below the grade of the UST.</p> <p>2006 – Ten 1,000-gallon gasoline USTs were excavated and removed from the site. The USTs were found to be riddled with perforations. PID readings from the excavation exceeded 2,000 ppm. Approximately 364 tons of petroleum impacted soil was excavated and removed from the site. MDE requested that 6 confirmation samples be collected between 2 and 3 feet below grade surface (bgs) of the former USTs and analyzed for TPH-DRO/GRO and VOCs, all of which were non-detect with the exception of TPH-DRO that was detected in all six samples between 15 mg/kg and 26 mg/kg.</p> <p>No groundwater samples were collected during the investigations. However, based on the local topography the site appears believed to be crossgradient of the LOD.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Rhode Island Avenue (US Route 1), across from Braxton Place and Crittenden Street, in Hyattsville, Maryland. To the east of the LOD are railroad tracks and an industrial area dating from the 1960s. The general area consists of many automotive services, including body shops, repair shops and car sales. Outside the industrial area is residential development, some developed before 1900. To the south is undeveloped land surrounding the Northwest Branch of the Anacostia River. Twenty five sites in the surrounding area were listed on one or more environmental database. Thirteen of these had former and/or active USTs/ASTs, OCP cases, or reported spill associated with them. Three sites with a total of five OCP cases associated with the removal of over 15 USTs are located within 150 feet upgradient of the LOD. These three sites include Marche & Co at 4800 Rhode Island Ave, Demers Real Estate and Mills Radiator Shop at 4802 Rhode Island Ave, and Demers Real Estate and 82 Brewing at 4822-4824 Rhode Island Ave. Based on available data provided by MDE through a PIA request, substantial source removal of petroleum impacted soils occurred at each of these sites. While confirmatory soil sampling indicates that the majority of the impacted material was removed, groundwater impacts were not evaluated. Since the LOD is downgradient of these sites, impacts cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located on the eastern side of Rhode Island Avenue (US Route 1), north of 43rd Avenue, in Hyattsville, Maryland. A railroad runs parallel with Rhode Island Avenue on the east side. The surrounding area is mostly commercial, much of it developed by 1900. Several government and institutional buildings are located west and north of the LOD, which were built in the late 1980s/early 1990s. Thirty four sites in the surrounding area were listed on one or more environmental database. Of those identified sites, twenty-two had former and/or active USTs/ASTs, OCP cases, or reported spills associated with them. The most concerning, a Prince George's County government center located directly northwest (upgradient) of the LOD, had nine historic USTs along with one currently in-use UST. The historic USTs include gasoline, diesel and heating oil tanks ranging in size from 500-gallons to 12,000-gallons. Closure assessment information was only available for one former UST, a 500-gallon gasoline UST. Gasoline from this UST apparently migrated beneath an adjacent parking garage where it was captured and accumulated in an oil/water separator associated with a parking garage. In addition, elevated petroleum vapors were documented on multiple levels of the parking garage. Due to high concentrations of petroleum vapors present, a vapor recovery system was installed and ambient air monitoring was initiated. A total 4-gallons of free product was recovered from a monitoring well near the 500-gallon gasoline UST. Based on known historical impacts at the site, hydraulic direction from the LOD (upgradient) and the lack of information regarding closure of eight of the nine historical USTs, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Eya Mokhtari Parcel 5604 Rhode Island Ave (Rt 1)	2,300	OCP – In 2009, a 3,000-gallon gasoline UST was excavated and removed from the site. Two confirmation samples were collected from below the grade of the former UST and analyzed for petroleum constituents, all of which were non-detect. Based on further review the site is believed to be at least 2,300-feet north of the LOD.	Low
2,9	Hyattsville Justice Center, PG County Justice Center, Hyattsville Auto Body 5000 Rhode Island Ave.	70	<p>OCP, UST – The site has nine historic USTs and one UST currently in-use. The historic USTs include four gasoline USTs (10,000-gal, 4,000-gallon, 12,000-gallon, two 2,000-gallon and a 500-gallon), two diesel USTs (2,000-gallon and 12,000-gallon), and one heating oil UST (10,000-gallon). Available information on these is as follows:</p> <p>1996 – A 12,000-gallon gasoline tank and a 12,000-gallon diesel tank, both installed in 1989, were closed in place in 1997 after the system failed a tightness test.</p> <p>1999 – A 500-gallon gasoline tank was installed in 1990 and closed in-place in 1999. Several areas of petroleum vapor accumulation were initially documented, including Storage Room #G305 on Level P-2, Emergency Generator Room 78 on Level P-1, and in the Police Motorcycle Storage Area at the southwest corner of Level P-2. Free phase gasoline was discovered in an oil/water separator located on Level P-3 of the parking garage, the product was subsequently removed by Tri-County Industries, a licensed waste hauler. Due to the high concentrations of petroleum vapors on Level P-2, a vapor recovery system was installed and ambient air monitoring was initiated. A total 4-gallons of free product was recovered from MW-1. Impacts appear isolated to immediate area around this former UST and parking garage.</p> <p>FINDS/FRS, RCRA SQG – The facility is a RCRA small quantity generator of ignitable waste and has received a written informal violation. The site operates under a minor air permit.</p> <p>Based on a lack of information regarding the other USTs formerly located onsite, impacts to the LOD cannot be ruled out.</p>	Moderate

3/4	Mountjoys Autoshop Incorporated 4835 Rhode Island Ave.	80	FINDS/FRS, RCRA SQG – Site is a RCRA small quantity generator of several hazardous wastes with no records of violation.	Low
5/6	Leone (sic) Auto Body, Leong Body Shop Inc. 4833 Rhode Island Ave.	85	FINDS/FRS, ICIS, RCRA SQG – Site is a RCRA small quantity generator of ignitable waste and spent nonhalogenated solvents with no records of violation. The site operates under a minor air permit.	Low
7	PG County Service Bldg-5012 Rhode Is, County Services Bldg, County Services Building 5012 Rhode Island Ave.	115	FINDS/FRS, OCP, UST – This site has one historic UST and one currently in use. The historic UST was a 10,000-gallon heating oil tank removed in 1989; date of installation is unknown. The tank in use is a 550-gallon heating oil tank installed in 1986. A 1989-1990 OCP case does not indicate a release or cleanup occurred.	Low
8,12,16	Hyattsville Gas & Electric 5022 Rhode Island Ave.	2000	CERCLIS, CERCLIS NFRAP, SEMS Archive, DSHW – This site was assessed under CERCLIS as part of a survey of tar disposal location of town gas producers, no further remedial action. Is planned and is not a potential National Priorities List Site. The site was listed as being 135 feet from the LOD; however, after further review, the site is approximately 2,000 feet southeast (downgradient) of the LOD.	Low
10,11	Giant Auto Body 4825 Rhode Island Ave.	155	FINDS/FRS, ICIS, RCRA VSQG – This site is a RCRA very small quantity generator of ignitable wastes and spent nonhalogenated solvents with no records of violation. It operates under a minor air permit and received an administrative informal notice of violation.	Low
13,14	Performance Printing 4814 Rhode Island Ave.	220	FINDS/FRS, RCRA SQG – The site is a RCRA small quantity generator with no records of violation.	Low
15,24	Demers Real Estate Inc. Streetcar 82 Brewing 4822-4824 Rhode Island Ave	240	OCP, UST – This site has four historic USTs, including three 3,000-gallon gasoline tanks and a 1,000-gallon heating oil tank installed at an unknown date and removed in 2007. According to available information, heavy staining and elevated PID readings were recorded in the excavation. Approximately 7.3 tons of soil was excavated and removed from the site. Confirmation samples were collected from below the grade of the excavated area and analyzed for petroleum constituents, which were non-detect. Based on the local topography, the site appears downgradient of the LOD.	Low
17,18	Bergmann's Cleaning, Inc. 4800 Baltimore Ave.	260	UST, OCP – This site has one historic UST - a 3,000-gallon kerosene tank was removed in 1996, date of installation is unknown. The 1996-1998 tank closure case indicated a release and cleanup occurred. This site appears downgradient of the LOD.	Low

19/20	McDonald Auto Body, McDonald Body Works, McDonalds Auto Body 4801 Baltimore Ave.	275	FINDS/FRS, ICIS, OCP, RCRA VSQG, UST – This site has a single historic UST, a 550-gallon gasoline tank installed in 1971 and removed in 1996. The 1996 OCP tank closure case does not indicate a release/cleanup occurred. The site is a RCRA very small quantity generator of ignitable waste and spent halogenated solvents with no records of violation. The site operates under a minor air permit.	Low
21,23	Woodcraft Company 4828 44 th Ave.	295	FINDS/FRS, RCRA Non Gen – This site is a RCRA non generator of waste. It operates under a minor air permit.	Low
22	Moeller Pools Inc 4809 Rhode Island Ave.	295	OCP – This site has a 1991 OCP release that does not indicate a release or cleanup occurred.	Low
25	Chiltepe Grill Restaurant 4821 Baltimore Ave.	360	FINDS/FRS – This site is a food service contractor on the state master list.	Low
26	McDonald Auto Body Works 4510A Emerson St.	370	FINDS/FRS, ICIS – This site operates under a minor air permit.	Low
27,29	Former Miles Radiator Shop 4802 Rhode Island Ave	370	OCP, UST – This site has 11 historic USTs, including ten 1,000-gallon gasoline USTs installed at an unknown date and removed in 2006 and a 3,000-gallon gasoline tank installed in 1982 and removed in 2002. OCP cases from 2002 and 2006-2007 both indicate a release and cleanup occurred. Based on the local topography, the site appears downgradient of the LOD.	Low
28	4744 Baltimore Ave.	380	ERNS – A 2008 ERNS record stated a reporter called in about potentially radioactive materials in a load of material removed from the site and dropped off at a scrapyard.	Low
30	Decatur St & Baltimore, Tri-County Industries, Inc., Hyattsville Team Track/CSXT Train #T-C24A Alternate Rt 1 & Decatur Ave.	410	ERNS, FINDS/FRS, OCP – Site has a 1993-1995 OCP case that does not indicate a release/cleanup occurred. A 1993 ERNS report indicates a small spill of waste gasoline occurred when a vacuum truck was transferring product from a rail tank car, speedy dry was used to recover the material and it was drummed for disposal.	Low
31,37	Standard Leasing Corp 4720 Baltimore Ave.	425	OCP, UST – This site had a single historic UST. A 10,000-gallon gasoline tank was installed in 1972 and removed in 1992. Neither the 1983 nor 1992 OCP case indicated a release/cleanup occurred.	Low
32	GKR Printing 4812 Rhode Island Ave.	440	FINDS/FRS – Site operates under a minor air permit.	Low
33	EGC Auto Body Shop 471904 th Pl.	450	FINDS/FRS – Site is on the state master list.	Low
34	Patterson Body & Paint, Patterson Pain & Body 4715 42 nd Pl.	450	FINDS/FRS, RCRA SQG – This site is a RCRA small quantity generator of ignitable waste with no records of violations. It operates under a minor air permit.	Low
35	Pat's Garage Inc 4711-42 nd St	450	FINDS/FRS, RCRA SQG – This site is a RCRA small quantity generator of lead, benzene, and tetrachloroethylene with no records of violations.	Low

Ranking Rationale Site Summary		
<p>The LOD is located on the east side of Rhode Island Avenue (US Route 1), between 43rd Avenue and Farragut Street, in Hyattsville, Maryland. The area surrounding the LOD is mostly commercial, much of it developed by 1900. Several government and institutional buildings are located west and north of the LOD, which were built in the late 1980s/early 1990s. Thirty three sites in the surrounding area were listed on one or more environmental database. Of those identified sites, twenty-two had former and/or active USTs/ASTs, OCP cases, or reported spills associated with them. The most concerning, a Prince George's County government center located directly northwest (upgradient) of the LOD, had nine historic USTs along with one currently in-use UST. The historic USTs include gasoline, diesel and heating oil tanks ranging in size from 500-gallons to 12,000-gallons. Closure assessment information was only available for one former UST, a 500-gallon gasoline UST. Gasoline from this UST apparently migrated beneath an adjacent parking garage where it was captured and accumulated in an oil/water separator associated with a parking garage. In addition, elevated petroleum vapors were documented on multiple levels of the parking garage. Due to high concentrations of petroleum vapors present, a vapor recovery system was installed and ambient air monitoring was initiated. A total 4-gallons of free product was recovered from a monitoring well near the 500-gallon gasoline UST. Based on known historical impacts at the site, hydraulic direction from the LOD (upgradient) and the lack of information regarding closure of eight of the nine historical USTs, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

A 1989-1990 OCP case does not indicate a release or cleanup occurred.	Low
7	Decatur St & Baltimore, Tri-County Industries, Inc., Hyattsville Team Track/CSXT Train #T-C24A Alternate Rt 1 & Decatur Ave.	105	ERNS, FINDS/FRS, OCP – Site has a 1993-1995 OCP case that does not indicate a release/cleanup occurred. A 1993 ERNS report indicates a small spill of waste gasoline occurred when a vacuum truck was transferring product from a rail tank car, speedy dry was used to recover the material and it was drummed for disposal.	Low
8	Chiltepe Grill Restaurant 4821 Baltimore Ave.	140	FINDS/FRS – This site is a food service contractor on the state master list.	Low
9	Corner Decatur & Baltimore Ave.	150	HMIRS – Two records of a 1993 spill of approximately 100-gallons of gasoline that occurred while unloading from a train. Spill impacted approximately 10'X20' of railroad bed, hazmat team diked and contained the area with speedy dry, and all contaminated soil and rocks was removed and drummed for disposal. No hazardous materials entered any drains or waterways.	Low
10	CSX Transport 5100 Blk of RT 1	200	OCP – A 1992 OCP case does not indicate a release or cleanup occurred.	Low
12,17	Machen & Machen, Machen Property, Farragut St.	210	OCP, UST – This site has a single historic UST. A 550-gallon heating oil tank was installed in 1962 and removed in 1998. Both a 1997-1998 and a 1998 OCT case indicated a release and cleanup occurred.	High
13	City of Hyattsville – Parking Lot #3 4320 Farragut St.	245	Alt Fuels – This site is an electric fuel station.	Low
14,16	Bergman's Laundry 4800 Baltimore Ave.	245	UST – This site has one historic UST - a 3,000-gallon kerosene tank was removed in 1996, date of installation is unknown. The 1996-1998 tank closure case indicated a release and cleanup occurred. This site appears crossgradient of the LOD.	Low

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
15	McDonald Auto Body, McDonald Body Works, McDonalds Auto Body 4801 Baltimore Ave.	255	FINDS/FRS, ICIS, OCP, RCRA VSQG, UST – This site has a single historic UST, a 550-gallon gasoline tank installed in 1971 and removed in 1996. The 1996 OCP tank closure case does not indicate a release/cleanup occurred. The site is a RCRA very small quantity generator of ignitable waste and spent halogenated solvents with no records of violation. The site operated under a minor air permit.	Low
18,19	Mountjoys Autoshop Inc. 4835 Rhode Island Ave.	265	FINDS/FRS, RCRA SQG – Auto shop is a RCRA small quantity generator of several hazardous wastes with no records of violations.	Low
20,22	McDonalds Auto Body 4801 Baltimore Ave.	280	FINDS/FRS, ICIS, OCP, RCRA VSQG, UST – This site has a single historic UST, a 550-gallon gasoline tank installed in 1971 and removed in 1996. The 1996 OCP tank closure case does not indicate a release/cleanup occurred. The site is a RCRA very small quantity generator of ignitable waste and spent halogenated solvents with no records of violation. The site operates under a minor air permit.	Low
21,23	Leong Body Shop Inc. 4833 Rhode Island Ave.	340	FINDS/FRS, ICIS, RCRA SQG – Site is a RCRA small quantity generator of ignitable waste and spent nonhalogenated solvents with no records of violation. The site operates under a minor air permit.	Low
24	CSX Railroad 4511 Decatur St.	420	OCP – An OCP case for a vehicle accident involving a release and cleanup was opened and closed in 2004.	Low
25,28	Giant Auto Body 4825 Rhode Island Ave.	430	FINDS/FRS, ICIS, RCRA VSQG – This site is a RCRA very small quantity generator of ignitable wastes and spent nonhalogenated solvents with no records of violation. It operated under a minor air permit and received an administrative informal notice of violation.	Low
26	4314 Farragut St.	430	HMIRS – An approximately 0.25-gallon spill of diesel occurred during a delivery in 2009 and was cleaned up with spill pads.	Low
27	4744 Baltimore Ave.	430	ERNS – A 2008 ERNS record stated a reporter called in about potentially radioactive materials in a load of material removed from the site and dropped off at a scrapyard.	Low
29,32	Valley Typesetting Inc, Trilli Property 4327 Gallatin St.	500	FINDS/FRS, OCP, RCRA NON GEN, UST – This site has two historic USTs, a 550-gallon diesel and a 550-gallon gasoline tank, both removed in 2012 with unknown installation dates. The 2012 tank closure OCP case indicates a release and cleanup occurred. The site is on the RCRA non generator list, and has no records of violation.	Low
30,34	Performance Printing 4814 Rhode Island Ave.	500	FINDS/FRS, RCRA SQG – The site is a RCRA small quantity generator with no records of violation.	Low
31,39	Woodcraft Company 4828 44 th Ave.	500	FINDS/FRS, RCRA Non Gen – This site is a RCRA non generator of waste. It operates under a minor air permit.	Low
33,40	Standard Leasing Corp 4720 Baltimore Ave.	515	OCP, UST – This site had a single historic UST. A 10,000-gallon gasoline tank was installed in 1972 and removed in 1992. Neither the 1983 nor 1992 OCP case indicated a release/cleanup occurred.	Low

City	Hyattsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the east side of Rhode Island Avenue (US Route 1), approximately 35 feet south of Farragut Street, in Hyattsville, Maryland. The area surrounding the LOD is mostly commercial, much of it developed by 1900. Several government/institutional buildings are located southwest of the LOD, these were built in the late 1980's/early 1990's. Twenty-six sites were identified in the environmental database report around the LOD. Of those identified sites, eighteen had former and/or active USTs/ASTs, OCP cases, or reported spill associated with them. Three of these sites warrant further investigation prior to intrusive groundwater to determine if environmental media within the LOD have been impacted. These sites include the Machen Property (ERIS Site ID 5/8) located 185 feet from the LOD, the Prince George's County government center (ERIS Site ID 9/13) located across Rhode Island Avenue, and the Valley Typesetting Inc. site (ERIS Site ID 14/17) located 375 feet from the LOD. Each of these involved former USTs that were found to have leaked during tank removal activities. Minimal information was available on the Machen Property sites, other than two OCP cases were assigned, both stating a release and cleanup activities occurred. A PIA request was submitted to MDE for further information; however, the MDE stated that the files had been destroyed per their file retention policy. The Prince George's County government center had nine historic USTs along with one currently in-use UST. The historic USTs include gasoline, diesel and heating oil tanks ranging in size from 500-gallons to 12,000-gallons. Closure information was only available for the 500-gallon gasoline UST. Released gasoline was identified in an oil/water separator associated with an adjacent parking garage, which also had a vapor recovery system installed due to the buildup of vapors beneath it. The Valley Typesetting site had two historic USTs, a 550-gallon diesel and a 550-gallon gasoline tank, both removed in 2012. During UST removal activities, perforations were observed in both tanks, and soil screening with a PID identified readings up to 1,000 ppm. Approximately 20 tons of impacted soils and 229 gallons of impacted liquids were removed from the excavation pit. Confirmatory soil</p>		

SITE ID: **WAS-2071-MODERATE**

Project Area Site Descriptions

<p>sampling results were below regulatory levels. Based on this, MDE closed out the OCP case. Although MDE closed the OCP case, MDE did not require any groundwater sampling, which may have been impacted. The Machen Property and the Valley Typesetting sites appear to be located upgradient of the LOD, while the Prince George's County government center is located adjacent to the LOD. Based on the lack of information regarding eight of the nine former USTs associated with the adjacent Prince George's County government center, as well as the two upgradient properties with documented releases, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
5,8	Machen & Machen, Machen Property / 4328 Farragut St.	185	OCP, UST – This site has a single historic UST. A 550-gallon heating oil tank was installed in 1962 and removed in 1998. OCP cases from both 1997 and 1998 indicated a release and cleanup occurred. Both OCP cases were closed in November 1998. A PIA request was submitted to MDE for further information; however, the MDE stated that the files had been destroyed per their file retention policy.	Moderate
6,10,12	Hyattsville Gas & Electric 5022 Rhode Island Ave.	2,300	CERCLIS, CERCLIS NFRAP, SEMS Archive, DSHW – This site was assessed under CERCLIS as part of a survey of tar disposal location of town gas producers, no further remedial action. Is planned and is not a potential National Priorities List Site. The site was listed as being 135 feet from the LOD; however, after further review, the site is actually 2,300 feet southeast (downgradient) of the LOD.	Low
7	City of Hyattsville – Parking Lot #3 4320 Farragut St.	230	Alt Fuels – This site is an electric fuel station.	Low

Project Area Site Descriptions

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
9,13	Hyattsville Auto Body, P.G. County Justice Center- Hyatt, Hyattsville Justice Center, 5000 Rhode Island Ave.	270	<p>OCP, UST – The site has nine historic USTs and one UST currently in-use. The historic USTs include four gasoline USTs (10,000-gal, 4,000-gallon, 12,000-gallon, two 2,000-gallon and a 500-gallon), two diesel USTs (2,000-gallon and 12,000-gallon), and one heating oil UST (10,000-gallon). Available information on these is as follows:</p> <p>1996 – A 12,000-gallon gasoline tank and a 12,000-gallon diesel tank, both installed in 1989, were closed in place in 1997 after the system failed a tightness test.</p> <p>1999 – A 500-gallon gasoline tank was installed in 1990 and closed in-place in 1999. Several areas of petroleum vapor accumulation were initially documented, including Storage Room #G305 on Level P-2, Emergency Generator Room 78 on Level P-1, and in the Police Motorcycle Storage Area at the southwest corner of Level P-2. Free phase gasoline was discovered in an oil/water separator located on Level P-3 of the parking garage, the product was subsequently removed by Tri-County Industries, a licensed waste hauler. Due to the high concentrations of petroleum vapors on Level P-2, a vapor recovery system was installed and ambient air monitoring was initiated. A total 4-gallons of free product was recovered from MW-1. Impacts appear isolated to immediate area around this former UST and parking garage.</p> <p>FINDS/FRS, RCRA SQG – The facility is a RCRA small quantity generator of ignitable waste and has received a written informal violation. The site operates under a minor air permit.</p> <p>Based on a lack of information regarding the other USTs formerly located onsite, impacts to the LOD cannot be ruled out.</p>	Moderate
11	PG County Service Bldg-5012 Rhode Is, County Services Bldg, County Services Building 5012 Rhode Island Ave.	300	<p>FINDS/FRS, OCP, UST – This site has one historic UST and one currently in use. The historic UST was a 10,000-gallon heating oil tank removed in 1989; date of installation is unknown. The tank in use is a 550-gallon heating oil tank installed in 1986. A 1989-1990 OCP case does not indicate a release or cleanup occurred.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located on the east side of Baltimore Avenue (US Route 1), south of Longfellow Street, in Hyattsville, Maryland. The surrounding area is residential with commercial some properties, especially further east of the LOD. The surrounding area was developed by the 1900's, and was originally residential, becoming commercial in the 1960's, and then again redeveloped as mostly multi-family residential in the 2000's. The surrounding area was observed in its current configuration by 2015. Twenty sites listed on one or more environmental databases were identified within 600 feet of the LOD. Eighteen of the sites have registered active and former UST/AST, OCP cases, and reported spills, five of which are located within 180 feet of the LOD. In addition, a dry cleaner is located adjacent to the LOD, although it was not listed in any environmental database. Based on the number of active and former petroleum USTs/ASTs, OCP cases, and reported spills, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

1	AEI Consultants Inc 5516 Baltimore Ave.	170	OCP, UST – In 2012, two 500-gallon USTs along 20 tons of impacted soil was excavated and removed from the site. Two confirmation samples were collected that identified concentrations of TPH-GRO at 750 mg/kg, 720 mg/kg, and 1,600 mg/kg at 8 feet below grade. No groundwater was encountered or sampled during the investigation. 10-10-10 fertilizer was mixed into the soil and the excavation was backfilled.	High
2	Elephant Car Wash 5506 Baltimore Ave.	75	OCP – This site has a closed 1997 OCP case for a tank closure, the record indicates that no release occurred. Per MDE, the case files were destroyed per MDE's file retention policy.	Moderate
3	Lustine Oldsmobile, Lustine Chevy & Olds, Lustine Oldsmobile 5600 Baltimore Ave.	20	FINDS/FRS, OCP, RCRA SQG – This site has a closed OCP case from 1990; a release/cleanup is not indicated. The site was a RCRA small quantity generator of ignitable waste with no records of violation.	Moderate
4	C & P Telephone - 5500 Baltimore Ave, Bell Atlantic – Leaking Vehicle, C& P Telephone Wire Center, Verizon Communications – Hyattsville Wire Center MD 03540 5500 Baltimore Ave.	100	FINDS/FRS, OCP, UST – This site has one UST in use along with three historic USTs. The historic tanks include a 4,000-gallon kerosene tank installed in 1964 and a 5,000-gallon diesel tank installed in 1988, both were closed in place in 1994. In addition, a 5,000-gallon heating oil tank was installed in 1961 and removed in 1988. The site has three OCP cases, one from 1986 to 1991, one from 1994 (tank closure), and one from 1996, none of these cases indicated that a release/cleanup occurred. The site operated under a minor air permit.	Moderate
5	ADH Retail LLC 5501 Baltimore Ave.	110	OCP – This site has a closed OCP case from 2011 for an AST leak of residential heating oil along with cleanup. Approximately 250-gallons was released from a 500-gallon AST. Approximately 98 tons of petroleum impacted soil was excavated and removed. The facility was served with a violation for not properly reporting the incident.	Low
6	Henry's Towing 4511 Longfellow St.	140	OCP – This site has a closed 2004 OCP case for dumping that indicates a release and cleanup occurred.	Low
7	Lustine Properties 5700 BLK Baltimore Blvd. (sic)	150	OCP – This site has a 2004-2007 OCP case for a tank closure that involved a release and cleanup.	High
8	Lustine Collision Center 4510 Longfellow St.	155	FINDS/FRS – This site operated under a minor air permit.	Low
9,10	Lustine Chevrolet 4516 Longfellow St.	180	FINDS/FRS, OCP, RCRA SQG, UST – This site has two historic USTs, a 5,000-gallon gasoline tank installed in 1988 and removed at an unknown date, and a 2,000-gallon gasoline tank installed at an unknown date and removed in 1987. A both a 1986-1990 and a 1987 OCP case do not indicate a release or cleanup. The site is a RCRA small quantity generator of ignitable waste with no records of violation.	Moderate

City	Hyattsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Annapolis Road (MD 450), east of 65th Avenue, in Hyattsville, Maryland. The surrounding area is primarily developed with retail and fast food businesses. The area was generally developed in the 1960s; a shopping center north of the LOD was redeveloped into a big box store with pad restaurants in the 2000s. A former auto service shop located within the Montgomery Ward Plaza had a 550-gallon waste oil UST removed in 1990 as well as 18 hydraulic vehicle lifts in 2004; however, the site was found to be approximately 845 feet north of the LOD. A former gas station was located approximately 185 feet southwest (crossgradient) of the LOD. Based on available data, impacts from the former gas station are not believed to have impacted the LOD based on the groundwater flow to the south/southwest. A dry-cleaning facility is located approximately 135 feet south (downgradient) of the LOD. Impacts to the LOD are unlikely based on these site's down- to crossgradient proximity to the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Hechinger #118, Montgomery Wards, Capital Plaza, Nellis Corp, Montgomery Ward 109710/ 6200 Annapolis Rd	20	<p>FINDS/FRS, RCRA Non Gen – No longer generating, no violations.</p> <p>OCP, UST – This large shopping center had one 550-gallon used oil tank removed in 1990. Holes were observed in the top of the UST; however, no impacted soil was observed or encountered during the excavation and removal of the UST. The MDE inspector allowed for the soils to backfilled into the excavation and the case was closed.</p> <p>2004 – Eighteen hydraulic vehicle lifts and fluid reservoir tanks were removed from the former Montgomery Ward's Auto Service Center on the west side of the former shopping complex, north of the LOD. According to a summary report that detailed the removal and confirmation sampling, the hydraulic lifts had not been used since 2000. The maximum PID reading recorded was from the excavations was 160 ppm. A total of 199 tons of petroleum impacted soil was removed and disposed of offsite. Twelve confirmation soil samples were collected from six of the excavations where impacted material was encountered and analyzed for TPH (non-detect to 100 mg/kg) and TPH-DRO (non-detect to 84 mg/kg). Groundwater was not encountered during the removal of the ancillary equipment or impacted soil. The case was closed approximately four months later.</p> <p>SPILLS – There are three spills records for the site, all related to a sanitary sewer line release of sewage in 2016.</p> <p>The ERIS report listed the site as being 20 feet from the LOD; however, after further review the former automotive center was approximately 845 feet to the north of the LOD.</p>	Low
2	Dryclean 2001 6517 Annapolis Rd.	135	<p>Drycleaners, Fed Drycleaners, FINDS/FRS, ICIS, RCRA CESQG – Generator of spent halogenated solvents with no violations. The site operates under a minor air permit and received an administrative informal notice of violation. Based on the local topography, the site is believed to be downgradient to crossgradient of the LOD.</p>	Low

3	Highpoint Senior High School, Sunoco, Jack Coopersmith, The Oaks 65 th Project, Coppersmith Property, 6421 Annapolis Rd.	185	FINDS/FRS, OCP – The site is a former gas station and has four historic USTs, a 6,000-gallon gasoline tank, a 4,000-gallon gasoline tank, and a 5,000-gallon “other” tank were installed in 1970 and removed in 1985; a 550-gallon heating oil tank was installed in 1976 and removed in 1991. The site has two OCP cases, one a 1991-1992 case with release and no cleanup, the other from 1988-2005 for well/groundwater contamination with motor/lube oil with release and cleanup. Based on available information, a substantial environmental investigation was conducted at the site that determined that petroleum impacts were present onsite as well as to the south and southeast (downgradient) of the LOD. According to a report from 2002, maximum concentrations of BTEX (0.097 mg/l), MTBE (0.18 mg/l), TPH-GRO (0.51 mg/l). Based on the low-level concentrations in groundwater, MDE granted closure to the site in 2004.	Low
4	Eastern Restaurant 6501 Annapolis Rd.	280	OCP – 2001-2002 case for well/groundwater contamination with motor/lube oil, release, and cleanup. The site appears downgradient from the LOD.	Low
5	6539 Annapolis Rd.	450	SPILLS – A 10-15 gallon spill of engine coolant occurred in 2013 as a result of a single vehicle collision.	Low
6	Capital Towers 3839 64 th Ave.	460	OCP – 2005-2006 OCP case with release and cleanup.	Low
7	BP Gas Station, Amoco, Annapolis Road BP 6321 Annapolis Road	460	FINDS/FRS, ICIS, OCP, RCRA SQG, UST – Gas station with three existing USTs and six historic USTs. The existing tanks are all 12,000-gallon tanks, two gasoline and one diesel, installed in 1995. The historic USTs include two 6,000 and two 8,000-gallon gasoline tanks installed in 1967 and removed in 1995 along with a 550-gallon used oil tank and a 550-gallon heating oil tank installed in 1985 and removed in 1995. The site has two OCP cases, one from 1995-1998 for a tank closure with no release/cleanup, the other from 1994-2007 for well/groundwater contamination from motor/lube oil with release and cleanup. The station operates under a minor air permit and is a RCRA small quantity generator with no violations. The site appears downgradient of the LOD.	Low
8	Duron Inc Store 012 6551 Annapolis Rd Unit C	525	FINDS/FRS – No information provided.	Low
9	Wal-Mart Store #05129, Walmart #05129 6210 Annapolis Rd	530	AST, FINDS/FRS, RCRA SQG – Store is a RCRA small quantity generator with no violations. It has four active ASTs, including 240-gallon used oil, two 400-gallon motor oil, and 800-gallon used oil, along with an historic 25-gallon used oil tank.	Low
10	3804-27 64 th Ave.	650	SPILLS – Release of sanitary sewage.	Low

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Along Annapolis Road by 7933 Annapolis Road	
City	New Carrollton	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Annapolis Road (MD 450), south of Riverdale Road, in New Carrollton, Maryland. The surrounding area is primarily commercial developments, which began prior to 1964, and is observed in its current configuration by 2017. The area surrounding the LOD includes a dry cleaner, an auto repair shop and three gas stations. Based on the local topography most of the sites are believed to be downgradient of the LOD, with the exception of the Merchants Tire Store located approximately 45 feet southwest of the LOD. This facility had a 550-gallon used oil UST excavated and removed and oil/water separator abandoned in-place approximately 100 feet south of the LOD in 1991. According to available information, numerous perforations were observed on the UST and impacted soil was observed in the excavation. PID readings from the bottom of the excavation ranged from 6.2 to 99 ppm. Based on the PID readings, the MDE inspector believed that impacts were not substantial and instructed the contractor to backfill the excavation without requiring any soil and/or groundwater sampling. The case was recommended for closure shortly thereafter; however, the case was not officially closed until 1999. Based on its proximity to the LOD and lack of sampling data, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Annapolis Road (MD 450), just west of the I-495 overpass, in New Carrollton, Maryland. The surrounding area is a mix of commercial and residential developments, which began prior to 1964 and is observed in its current configuration by 1993. The area surrounding the LOD includes a gas station auto service center and several other sites with database listings, however most sites did not experience releases or are located around 600 feet downgradient from the LOD. One OCP case, located approximately 120 feet crossgradient from the LOD, was opened for a vehicular accident in 2004 at the intersection of I-495 and Annapolis Road. The release was addressed/ cleaned up and the case was closed approximately one week later. The release was most likely surficial in nature. Therefore, based on the proximity and release type, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located in the south side of John Hanson Highway (US Route 50), west of Veterans Highway (MD 410) overpass, in Hyattsville, Maryland. John Hanson Highway and a portion of the future MD 410 were constructed in the 1960's, and the intersection was reconstructed into its current configuration along with extended/widened of MD 410 in the early 1990's. The LOD consists mostly of trees, along with a portion of the eastbound lane of John Hanson Highway. The LOD is surrounded by residential development to the north, mostly built by 1960, and a railroad and commercial development to the south, built in the 1970's and 1980's. No records of concern were identified in the vicinity of the LOD during this environmental review.</p>

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	New Hampshire Avenue, south of Overlook Drive	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the west side of New Hampshire Avenue (MD 650), south of Overlook Drive, in Silver Spring, Maryland. Single family residential dwellings, mostly developed by 1960, surround the LOD to the west, north and south, and commercial development, occurred mainly in the 1980s, is to the south. An office building is located immediately west of the southern portion of the LOD, multiple gas stations are present to the south. Nine facilities in the surrounding area were listed on one or more environmental database; however, based on the type of release (e.g., sewage) or hydraulic direction from the LOD (i.e., downgradient / crossgradient), impacts to the LOD are unlikely. A gas station with an OCP case involving a release is located 160 feet cross-gradient from the LOD, based on available information provided by MDE, impacts to are unlikely based on its crossgradient proximity to the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2	Guardian Realty 10230 New Hampshire Ave	100	UST, OCP – This site has one historic UST and one UST in use; a 300-gallon diesel tank was installed in 1988 and removed and replaced by a similar tank in 2003. The 2003-2006 OCP tank closure case does not indicate a release or cleanup took place.	Low
3,4	Amoco #766-Tanks, Hillandale Citgo, Citgo, Hillandale Amoco, Hillandale Citgo-MD 713 10226 New Hampshire Ave.	160	<p>OCP – This gas station has six historic USTs and four USTs in use. The historic tanks were all removed in 1991 and included five tanks installed in 1966: two 6,000-gallon and one 8,000-gallon gasoline tanks, a 550-gallon heating oil tank, and a 550-gallon waste oil tank, as well as a 10,000-gallon gasoline tank installed in 1982. Three existing four tanks were installed in 1991 and include a 10,000-gallon diesel tank and three 10,000-gallon gasohol tanks. The site has three OCP cases on file, including a 1991-2002 case for the tank removal which indicates a release and cleanup occurred, a 1991-1999 case with no release/cleanup indicated, and a 2003-2005 case for soil contamination with motor/lube oil, which does not indicate a release or cleanup.</p> <p>FINDS/FRS, ICIS, RCRA CESQG – The facility is a RCRA conditionally exempt small quantity generator of ignitable waste, corrosive waste, and benzene; the facility has no records of violation. The facility had an administrative informal notice of violation for an air permit (See Site ID 4) violation.</p> <p>Based on the local topography, the site appears downgradient of the LOD.</p>	Low
5	Hillandale Shell, Shell, Shell MD-510, Shell Station PMG-5400 10201 New Hampshire Ave.	350	<p>OCP, UST – This gas station has four historic USTs and three USTs currently in use. Historic USTs include three 10,000-gallon gasoline tanks and a 550-gallon used oil tank, all installed in 1979 and removed in 2008. Existing tanks were installed in 2008 and include a 20,000-gallon diesel and two 20,000-gallon gasohol tanks. The 2008-2010 OCP tank closure case and a 1989-2005 well/groundwater contamination case both indicate a release & cleanup; a 2010-2014 OCP tank registration case does not.</p> <p>Spills - A spill of 8-10 gallons of gasoline occurred in 2015 from customer error and reached a storm drain.</p> <p>FINDS/FRS, ICIS – The station operates under a minor air permit.</p> <p>Based on the local topography, this site appears downgradient from the LOD.</p>	Low

Project Area Site Descriptions

Watershed:	WAS	
Street Address/Nearest Cross Streets	Along I-495, east of New Hampshire Avenue	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the northern side of I-495, east of New Hampshire Avenue, in Silver Spring, Maryland. Commercial development that took place in the 1970s and 1980s is located north of the LOD, with single-family residential developed by the early 1960s to the west and east, and multi-family residential developed in the late 1960s to the south. Ten sites listed on one or more environmental database were identified in the surrounding area. Of these, six had documented releases, however, five of the sites are downgradient/crossgradient of the LOD, or at a sufficient distance where impacts to the LOD are unlikely. The Coca-Cola Bottling site, located 230 feet upgradient from the LOD, was identified as a potential concern. Based on information provided by MDE through a PID request the site was listed as having four USTs ranging in size from 4,000-gallons to 8,000-gallons removed prior to 1996. One OCP case identified petroleum impacted soil isolated to the area immediately around two 4,000-gallon USTs removed in 1993, approximately 650 feet north of the LOD. Based on the distance of the impacted area, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Home 2 Suites, Hillendale Shopping Center 1701 Elton St.	210	Alt Fuels, OCP – The site has a 1990 OCP case with no indication of a release or cleanup. The site is also an electric fuel site.	Low
2	Duffie, Ralph J. 1717 Elton Rd.	215	FINDS/FRS – Site operates under a minor air permit.	Low
3	Mid-Atlantic Corporation, Coca Cola Bottling Co, Coca-Cola Silver Spring, Coca-Cola Bottling Co Inc Mid-Atlantic, Mid-Atlantic Coca-Cola Bottling Company 1710 Elton Rd.	230	<p>FINDS/FRS, OCP, RCRA CESQG, TRIS – Minor air permit, CESQG, ICIS-NPDES Non Major, TRI Reporter, no violations</p> <p>UST, OCP – This site has four historic USTs, including an 8,000-gallon diesel tank installed in 1966 and removed in 1993; a 5,000-gallon tank containing an unknown substance installed in 1966 and removed at an unknown date; and a 4,000-gallon diesel tank and a 4,000-gallon gasoline tank both installed on an unknown date and removed in 1989.</p> <p>1989 – Two 4,000-gallon USTs were excavated and removed from the site, approximately 650 feet north of the LOD. No odors or staining were observed in the excavation. The excavation filled with water from a rain event the night before and sheen was observed in the excavation. Soil samples were collected from test pits dug approximately 10 feet below the grade of the former USTs, as well as from the grade of the former UST and analyzed for TPH and VOCs. Concentrations of TPH (1,170 mg/kg), benzene (573 ug/kg), toluene (366 ug/kg), ethylbenzene (1,400 ug/kg), and xylenes (6,100 ug/kg) were detected in the sample collected from the base of the excavation. Concentrations of TPH (31 and 118 mg/kg), benzene (ND and 3.6 ug/kg), toluene (ND and 6.7 ug/kg), ethylbenzene (5.8 and 15 ug/kg), and xylenes (24 and 30 ug/kg) were detected in the two samples collected approximately 10 feet below the grade of the former USTs. Based on the analytical results, the contractor concluded that the impacts were isolated to the immediate area around the former USTs. In 1996, six monitoring wells were installed around the former USTs to determine if groundwater had been impacted. The wells were hand bailed and checked for odors, sheens, and product, which were all clear. The case was closed shortly thereafter.</p> <p>1993 – An OCP case was opened in May 1993 and closed approximately one week later for the excavation and removal of an 8,000-gallon diesel UST. Records did not indicate that a release or cleanup occurred.</p> <p>ERNS – In 2006 a report of a leak of ammonia to the air was made and the leak was to be repaired.</p> <p>The facility is a RCRA conditionally exempt small quantity Generator of spent nonhalogenated solvents with no records of violation and is a Toxics Release Inventory</p>	Low

LOD ID: WAS-2501	Site Rank: Low	Figure Location: 
Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Central median of Sandy Spring Road, east of Columbia Pike	
City	Burtonsville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is locate along the central median of Sandy Spring Road (MD 198), east of Columbia Pike (US Route 29), in Burtonsville, Maryland. The surrounding area is primarily commercial. The surrounding area was primarily developed with agricultural and residential properties up until the 1980s, when a plant nursery was observed to the north of the LOD. Commercial development in the surrounding area continued through the 2010s. In approximately 2004, a bypass associated with Columbia Pike, as well as an interchange with Sandy Spring Road was constructed through the western portion of the plant nursery to the north of the LOD. The construction of commercial structure was completed on the property directly south of the LOD in 2018. The plant nursey to the north was flagged for having a 10,000-galllon diesel fuel UST and a 2,000-gallon gasoline UST that were excavated and removed in 1994, approximately the same time as when the new portion of Columbia Pike was built though the western half of the property. These former USTs were located at least 550 feet northwest (crossgradient) of the LOD, under what is now the southbound portion of Columbia Pike. Available records did not state whether a release occurred; however, if impacts were present, they would likely have been addressed during the construction of Columbia Pike. Thus impacts, to the LOD are unlikely. Two additional properties were flagged for having USTs. The commercial property located 300 feet to the south had a 550-gallon gasoline UST, and a church located 270 feet to the northeast had a 1,000-gallon heating oil UST. The OCP cases associated with the removal of these USTs have both received closure. Based on the OCP case status, distance and hydraulic direction, impacts to the LOD from these UST sites are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	SHEMIN NURSERIES/ 4100 SANDY SPRING ROAD	550	FINDS/FRS, UST, OCP – The facility had one 10,000-gallon diesel UST and one 2,000-gallon gasoline UST that were excavated and removed from the facility in 1994, approximately the same time as when the new portion of Columbia Pike was built though the western half of the property. The environmental data report stated that the site was 21 feet north of the LOD; however, based on a review of aerial photographs, the USTs were at least 550 feet northwest (crossgradient) of the LOD that is now southbound portion of Columbia Pike. Available records did not state whether a release occurred or remediation occurred, however it is believed that any impacts would have been addressed during the construction of the new portion of Columbia Pike.	Low
2	CARROLL R. RICKETTS 4011 SANDY SPRING ROAD	300	UST – A 550-gallon UST was excavated and reported from the property in 1988. The available records did not state whether a release occurred or remediation was required. The site was substantially redeveloped with a new office complex in 2014, any impacts were most likely address at that time. Based on the local topography, the site appears downgradient of the LOD.	Low
3	TRUE HOLINESS CHURCH OF JESUS CHRIST/ 4140 SANDY SPRING RD	270	UST, OCP – A 1,000-gallon heating oil UST was excavated and removed from the ground in 2007. An OCP case was opened on 10/30/2007. The case records state that impacted media was encountered during the removal of the UST, the impacted materials was addressed and closed approximately 6 months later on 5/6/2008. Based on the local topography, this site appears downgradient of the LOD.	Low
4	CALIFORNIA CHAUFFEURED TRANS./ UNKNOWN	320	FINDS/FRS – The facility was listed as having a NPDES permit from 2002 to 2016. No violations.	Low

SITE ID: **WAS-2501-LOW**

Ranking Rationale Site Summary		
<p>The LOD is locate along the south side of Sandy Spring Road (MD 198), east of the interchange with Columbia Pike (US Route 29) in Burtonsville, Maryland. The surrounding area is mixed used residential/commercial. A storage unit facility is located directly south of the LOD, a commercial building to the west, and a plant nursery, church, and residential properties to the north/northwest. The surrounding area was primarily developed with agricultural and residential properties up until the 1980s, when the plant nursery was observed to the northwest of the LOD. Commercial development in the surrounding area continued through the 2010s. In approximately 2004, a bypass associated with Columbia Pike, as well as an interchange with Sandy Spring Road, were constructed through the western portion of the plant nursery to the northwest of the LOD. The commercial structure directly south of the LOD occurred in 2018. Four facilities of concern were identified. The closest was the church, located approximately 160 feet to the north, had a leaking 1,000-gallon heating oil UST removed in 2008. Available records state that remediation/source removal occurred and the case was closed approximately 6 months later on 5/6/2008. A commercial property located 280 feet from the LOD had a 550-gallon UST excavated in 1988. The records did not state whether a release occurred; however, the property later underwent significant redevelopment. Impacts, if present, likely would have been address at that time. The remaining two facilities, both listed in the UST and OCP databases, are located 695 feet and 800 feet away, respectively. Based on the case statuses, distances and hydraulic direction, impacts to the LOD from the facilities are unlikely.</p>

Ranking Rationale Site Summary <p>The LOD is located along the western side of the Columbia Pike (US Route 29), north of Blackburn Road, in Burtonsville, Maryland. The surrounding area is primarily residential, with the exception of an office park to the northeast. Residential development began in the later 1950s and continued through the 1980s. The office park to the northeast was observed to be present by 1989. An autobody shop was listed approximately 660 feet to the north of the LOD; however, further evaluation determined this facility is actually 1,600 feet to the northwest. Thus, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of New Hampshire Avenue (MD 650), northeast Rodney Road, in Silver Spring, Maryland. The surrounding area is residential properties to the west and a recreation area east of the LOD. No substantial changes to the surrounding area were noted since 1964, with the exception of additional residential development to the southwest. A fire station is located 190 feet (crossgradient) of the LOD. A 550-gallon waste oil UST, a 550-gallon diesel UST, 2000-gallon diesel UST, and 550-gallon gasoline UST were excavated and removed from the site in 1994. No impacted soil was identified in the excavations or removed soil. Additionally, a 2,000-gallon diesel UST was excavated and removed from the site along with four 55-gallon drums of impacted soil. Confirmation samples were collected and analyzed for petroleum constituents, all of which were non-detect and the case was closed shortly thereafter. Based on a review of historical and current imagery, the USTs are believed to be approximately 275 feet northeast (crossgradient) of the LOD. Thus, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Hillendale Fire Station No. 12/ 10617 New Hampshire Ave Silver Spring, MD	275	<p>UST, OCP – Five USTs previously operated at the site. The USTs ranged in size from 550 to 2,000 gallons and held diesel, gasoline, and used oil. All five tanks are permanently out of use and have been removed from the ground.</p> <p>1993 – An oil/water separator onsite malfunctioned causing the grit chamber to overflow and approximately 50-gallons of oily water was released, some of which reached a drain. As much of the material was contained and disposed of properly. MDE inspected the area and determined that area had been cleaned sufficiently and the case was closed shortly thereafter.</p> <p>1994 - In February 1994, a 550-gallon diesel UST, 2000-gallon diesel UST, and 550-gallon gasoline UST were excavated and removed from the site. The USTs were found to be in good condition. The excavation and soils removed were screened with a PID that recorded readings of 11 to 25 ppm. Based on the PID results, the MDE inspector instructed the excavation to be backfilled. One day later, a 550-gallon waste oil UST was excavated and removed from the site in 1994. The excavation and soils removed were screened with a PID that recorded readings of 5 to 10 ppm. Based on the PID results, the MDE inspector instructed the excavation to be backfilled and the case was closed.</p> <p>2012 – A 1,000-gallon diesel UST was excavated and removed from the site. No visible perforations were observed in the removed tank or its associated piping. The maximum level detected in excavated soils utilizing a PID was 0.0 ppm at 8 feet below grade. Drips of liquid phase hydrocarbons were encountered under the former dispenser and contaminated soil was removed to 3 feet below grade. Piping was encased in a concrete trench. Two post-excavation soil samples were collected from the bottom of the excavation at approximately 8 feet below grade. One sample was collected below the former dispenser at approximately 3 feet below grade and soils were field screened. The soil sampling results were non-detect for all petroleum constituents. The case received closure approximately 2 months later.</p> <p>Based on a review of historical and current imagery, the USTs were approximately 275 feet northeast (crossgradient) of the LOD.</p>	Low

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Along Powder Mill Road, next to High Point High School's Track and Field	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in the ROW along Powder Mill Road (MD 212), bordering High Point High School's Track and Field area in Beltsville, Maryland. The surrounding area is a mix of commercial and residential developments, which took place during the 1960s through 1980s time period. The surrounding area is observed in its current configuration by 1994. Four facilities were flagged for being on one or more regulatory database. The closest was an ERNS case involving a 5-gallon release of heating oil from a leaking AST. The release was stopped and the AST replaced. Due to the minor volume released, impacts to the LOD are unlikely. The Shell gas station, located 313 feet to the southwest, has a history of contamination. Three active USTs and five additional former USTs are associated with this site. In addition, five OCP cases, include one for groundwater impacts, have been assigned. All OCP cases are currently closed. While impacts have been documented, the gas station is hydraulically crossgradient of the LOD at a distance of 313 feet. The remaining two flagged facilities are listed under the UST and OCP databases; however, these facilities are location at 540 feet and 600 feet from the LOD, in a hydraulically crossgradient direction. Thus, impacts to the LOD from these facilities are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	3510 Powder Mill Road Beltsville, MD	205	ERNS – In 1996, five gallons of No. 2 residential heating oil spilled from a pinhole leak in an AST. The release was stopped and cleaned up. A new AST was installed. Based on local topography the site appears located upgradient from the LOD.	Low
2	Shell #819 / PEH LC #819 / High Point Service Center 3412 Powder Mill Road Beltsville, MD	313	<p>UST – Three active USTs exist, including two 10,000-gallon gasoline USTs and a 12,000-gallon gasoline UST. In addition, a 550-gallon heating oil UST was removed in 1995, a 550-gallon used oil UST was removed in 1999, and three 10,000-gallon gasoline USTs were removed in 2011.</p> <p>OCP – Five OCP cases have been assigned. In 1999 and again in 2011, cases were assigned for closure of USTs. In both cases, a release and cleanup was noted. A case was opened in 2003 associated with groundwater contamination. Another case was assigned in 2011 associated with the installation of a new UST. The final OCP case, occurring in 1995, appears to be administrative to recode a heating oil UST from residential to commercial. All cases have since been closed.</p> <p>RCRA VSQG – There are no compliance violations associated with this facility.</p> <p>FINDS/FRS, ICIS – Gas station operations, minor air permit</p> <p>Based on local topography the site appears located crossgradient from the LOD.</p>	Low
3	Barclay Apts 3598 Powder Mill Road Beltsville, MD	540	<p>UST, OCP – A 20,000 gallon heating oil UST previously operated at the site. The tank is permanently out of use and has since been removed from the ground. During removal a release was noted and cleanup actions occurred. The OCP case was closed two years later.</p> <p>Based on local topography the site appears located crossgradient from the LOD.</p>	Low
4	11208A Cherry Hill Road Beltsville, MD	600	<p>UST, OCP – Previously, a 30,000 gallon heating oil UST operated onsite. The tank was removed from the ground in 1997. No release occurred and the case was closed within three months.</p> <p>FINDS/FRS – Minor air permit.</p> <p>Based on local topography the site appears located crossgradient from the LOD.</p>	Low

City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the eastern side of Powder Mill Road (MD 212), bordering the High Point High School property, in Beltsville, Maryland. The surrounding area is a mix of commercial and residential developments which took place during the 1960s through 1980s time period. The surrounding area is observed in its current configuration by 1994. Four facilities were flagged for being on one or more regulatory database. The closest facility, an ERNS case located 205 feet from the LOD, involved a 5-gallon release of heating oil from a leaking AST. The leak was stopped and the AST replaced. Due to the minor volume released, impacts to the LOD are unlikely. The adjacent High Point High School was listed on the UST, OCP and RCRA Generator databases. Two active USTs exist for heating oil storage, a 275-gallon UST and an 8,000-gallon UST. In 2008, a 20,000-gallon heating oil UST was removed and replaced with the existing 8,000-gallon UST. During removal, impacted soils were identified near an elbow for the product line, resulting in the excavation of approximately 84.1 tons of impacted soils. Soil endpoint analytical results were all non-detect, indicating the impacts were successfully removed. The location of the former UST is approximately 945 feet from the LOD. The third facility, the apartment complex to the northwest was also listed on the UST and OCP databases for the removal of a 20,000-gallon heating oil UST. A release and cleanup was noted, and the OCP case was closed two years later. The location of this former UST is approximately 500 feet from the LOD. Finally, a gasoline/diesel service station located 600 feet from the LOD, was listed on the UST and OCP databases and has a history of impacts. Based on the distances of these records from the LOD, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	3510 Powder Mill Road Beltsville, MD	205	ERNS – In 1996, five gallons of No. 2 residential heating oil spilled from a pinhole leak in an AST. The release was stopped and cleaned up. A new AST was installed. Based on local topography the site appears located up- to crossgradient from the LOD.	Low
2,4	Barclay Apts 3598 Powder Mill Road Beltsville, MD 3580A Powder Mill Road Beltsville, MD	525	UST, OCP – In 2007, a 20,000-gallon heating oil UST was closed via excavation/removal. During removal a release was noted and cleanup actions occurred. The OCP case was closed two years later. FINDS/FRS – Minor air permit. Based on local topography the site appears to be up- to crossgradient from the LOD. In addition, while the database mapped this site at 425 feet from the LOD, actual distance from the former UST to the LOD is approximately 500 feet.	Low
3	High Point High School 3601 Powder Mill Road Beltsville, MD	535	UST – Currently, two USTs are in-use at the site, a 275-gallon UST and an 8,000-gallon UST. A 20,000-gallon UST was removed in 2008 and the existing 8,000-gallon UST was installed in its place. OCP – On July 31, 2008, the 20,000-gallon heating oil UST. No perforations were noted in the tank; however, a loose elbow joint and corrosion on one of the lines was observed, resulting in localized soil impacts. Approximately 84.1 tons of petroleum-impacted soils were excavated and four soil endpoint samples collected for BTEX, MTBE and TPH-DRO analyses. Analytical results of the soil samples were non-detect for all analytes. On October 21, 2008, MDE closed the OCP case. FINDS/FRS, RCRA VSQG – Generator of ignitable, corrosive, reactive wastes, various metals, and non-halogenated wastes. Formal enforcement activity occurring in 2014. Although the site is listed as 535 feet from the LOD, the former 20,000-gallon UST is located approximately 945 feet from the LOD. Based on local topography the site appears located crossgradient from the LOD.	Low

Street Address/Nearest Cross Streets	North side of Powder Mill Road, west of Allview Drive	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Powder Mill Road (MD 212), west of Allview Drive, in Beltsville Maryland. A portion of the LOD extends across Powder Mill Road. The area surrounding the LOD is primarily residential properties with Powder Mill High School to the southwest. The area to the north of the LOD was forested land until residential development began in the 1970s. The area surrounding the LOD has been observed in its current configuration since 2005. Two facilities were flagged for OCP cases; however, these facilities are located at 579 feet northeast and 641 feet west of the LOD. Based on these distances, impacts to the LOD are unlikely.</p>

Project Area Site Descriptions

LOD ID: WAS-2513	Site Rank: Low	Figure Location: 
Quadrant:	NE	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Along Powder Mill Road, northeast of Allview Drive / Evans Trail	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along the southern side of Powder Mill Road (MD 212), northeast of Allview Drive and Evans Trail, in Beltsville, Maryland. The area surrounding the LOD is primarily residential properties with forested land to the north and east. The area was entirely forest land until the 1980s when residential development began to the south and west. The area was observed in its current configuration since 2005. A SHWS, the Evans Trail Dump Site, is located 430 feet to the south. In 1984, a housing developer discovered approximately 250 drums were discovered between three and eight feet below the ground surface. Samples were collected, which revealed high concentrations of lead in the soil around the drums. The drums and 192 tons of contaminated soil were excavated and disposed of as hazardous waste, plus an additional 350 cubic yards of soil excavated and disposed of as non-hazardous waste. The site was given NFRAP designation by the EPA in 1987. Based on the completed remediation, and subsequent development of a residential housing, impacts to the LOD from the former drums are unlikely. Two other facilities listed on the OCP database were identified; however, as these facilities are located at distances of 520 feet and 579 feet from the LOD, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Powder Mill Village 3625 Powder Mill Road Beltsville MD 20705	250	FINDS/FRS – Unspecified permit, no violations noted.	Low
2,3	Evans Trail Dump Site Evans Trail Road Calverton MD 20705	430	SHWS, CERCLIS NFRAP – Evans Trail road is home to a former sand and gravel pit. In May 1984, a housing developer uncovered approximately 250 deteriorated 30-gallon drums. The drums had been buried at a depth of up to eight feet. The drums were observed to contain a black tarry substance that was leaking onto the ground and into the surrounding soil. Samples collected from the drums showed high levels of lead ranging from 20 ppm to 100 ppm. High levels of cyanide and chromium were also detected. The drums and 192 tons of soil were excavated and disposed of as hazardous waste. An additional volume of 350 cubic yards of soil was excavated and disposed of as non-hazardous waste. The site was given NFRAP designation by the EPA in 1987.	Low
4,6	Calverton Fire Department #41 3939 Powder Mill Rd Beltsville MD 20705	520	<p>UST, OCP – The fire department previously had three USTs on-site. One 2,000-gal gasoline UST, one 2,000-gal heating oil UST, and one 2,000-gal diesel UST. These USTs were excavated and removed in April 2000.</p> <p>An OCP case was opened at this site in October 1992. A release of Heating Oil occurred, but no cleanup activities were documented. The case was closed in May 2000.</p> <p>A second OCP case was opened in October 1995 and was closed nine years later in August 2004. The case was in relation to a test failure. No release or cleanup activities were recorded.</p>	Low
5	Perkins Development Corp 3939 Powder Mill Road	579	OCP – An OCP case was opened in December 1991 in relation to soil contamination. A release and cleanup activities occurred. The case was closed in September 1998.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1959	The area surrounding the LOD is primarily forest land. The former sand and gravel pit SHWS is observed to the southeast of the LOD.	Aerial
1988	Residential development has occurred to the northeast and the south of the LOD. The former Evans Trail dump site has been cleaned up and developed with residential properties.	Aerial
2005	The area surrounding the LOD is observed in its current configuration.	Aerial

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Northwest interchange of I-95 and Maryland State Route 200	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located within the northwest interchange of the I-95 and Maryland State Route 200 in Beltsville, Maryland. The surrounding area is primarily vacant forested land and roadway infrastructure. The surrounding area was primarily a gravel mine up until the late 1960s/early 1970s when I-95 was constructed. Maryland State Route 200 and the interchange were constructed in approximately 2009 and completed by 2013. In 2015, a release of approximately 840-gallons of diesel was release when a tank truck rolled over approximately 360 feet south (downgradient) of the LOD. The material was contained and impacted material was clean-up. As this release occurred on an impervious surface, was located downgradient of the LOD, and was reported to be cleaned up, impacts to the LOD from this release incident are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2	Zimmermans Home Center/ 3801 Sandy Spring Road	400	UST, OCP – This facility previously had three active petroleum USTs ranging in size from 550-gallons to 5,000-gallons that contained diesel, heating oil, and gasoline. All three USTs were excavated and removed in 2006. An OCP case was opened due to impacted subsurface being encountered during the removal of the USTs. The case received closure approximately 3 months after the USTs were removed. Based on the local topography, the property appears crossgradient of the LOD.	Low
3	Carroll R. Ricketts 4011 Sandy Spring Road	550	UST – One 550-gallon gasoline UST was excavated and removed from the site in 1988. There are no reported releases associated with the UST. Additionally, the site appears crossgradient of the LOD.	Low
4	SHEMIN NURSERIES 4100 SANDY SPRING ROAD	650	FINDS/FRS, UST, OCP – One 10,000-gallon diesel UST and one 2,000-gallon gasoline UST were excavated and removed from the site in 1994 and closed in 1996. There are no records stating a release occurred or remediation was required. Based on the local topography, the site appears to be crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low

City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along the southern side of Powder Mill Road (MD 212), west of Beltsville Drive, in Beltsville, Maryland. The surrounding area is primarily commercial land to the east and forested land to the west and has been in its current configuration since 2005. Three site listed as having OCP cases, former USTs or are closed State Hazardous Waste Site were identified between 460 and 745 feet downgradient or hydraulically separated from the site by a steam and are not considered a concern. A fire station located approximately 85 feet southeast (crossgradient) of the LOD had former USTs and documented releases. A PIA request was submitted to MDE for further information; however, the files only documented the removal activities and did contain any analytical sampling data needed to determine whether impacts were present in soil and/or groundwater onsite. However, the USTs are believed to be greater than 100 feet crossgradient of the LOD and any groundwater impacts would flow to the southwest, towards a stream running northwest to southeast. Thus, impacts to the LOD are unlikely.</p>

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along the southern side of Powder Mill Road (MD 212), east of Beltsville Drive, in Beltsville Maryland. The area surrounding the LOD is primarily commercial properties. Prior to development of commercial properties in 1971, the area was entirely forested land. The area surrounding the LOD was observed in its current configuration by 2005. There are five sites with active and/or inactive UST with documented releases and OCP cases within 410 feet to 650 feet downgradient of the LOD. An MDE VCP site, Calverton Shopping Center, is located approximately 280 feet north (upgradient) of the LOD. According to available records found on MDE's LRP website, the site is a commercial strip shopping center that houses an active drycleaner. A Phase I Environmental Site Assessment was completed in March 2012, followed by a Phase II Environmental Site Investigation which collected samples next to the dry cleaner. Analysis of the groundwater samples revealed volatile organic compounds above the department's cleanup standards. Per a 2/24/2017 letter, the Department approved proposed groundwater sampling on an annual schedule and restricted to PCE and its breakdown products. Per a letter from February 2019, MDE stated that groundwater sampling may be discontinued. Based on available information, impacts from the former drycleaner appeared to be isolated to the site, located approximately 280 feet upgradient of the LOD. A PIA request was submitted to MDE for further information on the site; however, MDE did not have any files available at the time of this review. Based on the drycleaner's upgradient direction, impacts cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

A Phase I Environmental Site Assessment was completed in March 2012. During a Phase II Subsurface Investigation soil and groundwater samples were collected next to Calverton Dry Cleaners tenant space. The samples were revealed to contain volatile organic compounds in both the groundwater above the department's cleanup standards. Per 2/24/2017 letter, the Department approved proposed groundwater sampling on an annual schedule and restricted to PCE and its breakdown products. Per a letter from February 2019, MDE stated that groundwater sampling may be discontinued. Based on available information, impacts from the former dry-cleaner are believed to be isolated to the site, approximately 165 feet upgradient of the LOD. A PIA request was submitted to MDE for further information on the site; however, MDE did not have any files available at the time of this review.</p>	Moderate

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along the eastern side of Powder Mill Road (MD 212), north of Beltsville Drive, in Beltsville Maryland. The surrounding area is primarily commercial properties. Prior to commercial development in 1971, the area was entirely forested land. The surrounding area was observed in its current configuration by 2005. There are nine sites with active and inactive USTs with document releases within 285 feet to 655 feet down Calverton Shopping Center, is located approximately 10 feet north (upgradient) of the LOD.</p> <p>According to available records found on MDE's LRP website, the site is a commercial strip shopping center that houses an active drycleaner. A Phase I Environmental Site Assessment was completed in March 2012, followed by a Phase II Environmental Site Investigation which collected samples next to the dry cleaner. Analysis of the groundwater samples revealed volatile organic compounds above the department's cleanup standards. Per a 2/24/2017 letter, the Department approved proposed groundwater sampling on an annual schedule and restricted to PCE and its breakdown products. Per a letter from February 2019, MDE stated that groundwater sampling may be discontinued. Based on available information, impacts from the former drycleaner appeared to be isolated to the site, located approximately 280 feet upgradient of the LOD. A PIA request was submitted to MDE for further information on the site; however, MDE did not have any files available at the time of this review. Based on the drycleaner's upgradient direction, impacts cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Type of property	ROW
Ranking Rationale Site Summary	
<p>The LOD lies along the western side of Powder Mill Road (MD 212), north of Beltsville Drive, in Beltsville Maryland. The surrounding area is primarily commercial properties. Prior to commercial development in 1971, the area was entirely forested land. The surrounding the LOD was observed in its current configuration by 2005. A gas station is located directly northwest (upgradient) of the LOD that has four active petroleum USTs ranging in size from 8,000-gallons to 12,000-gallons and one former 1,000-gallon used oil UST. In 1998, four hydraulic vehicle lifts were removed from the site, as well as retrofitting the onsite USTs, product piping, and dispenser islands. Approximately 135 tons of soil from the dispenser island trenches was excavated and disposed of offsite. In 2000, a petroleum release from one of the regular gasoline USTs was reported. Four monitoring wells were installed around the tank area. No free product was ever observed, but the March 2001 groundwater sampling results identified dissolved BTEX concentrations as high as 12,205 µg/l in the central portion of the site. The case received closure from MDE in August 2001. Groundwater at the site is believed to flow southeast, towards the LOD. Additionally, an MDE VCP site known as the Calverton Shopping Center is located to the west of the LOD. Dry-cleaning operations have resulted in chlorinated solvent impacts to soil and groundwater. The site is believed to be crossgradient of the LOD; however, impacts cannot be ruled out based on a lack of information on the exact location of the impacts. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Plata Grande Restaurant 4060 Powder Mill Rd Beltsville MD 20705	245	FINDS/FRS – No violations were identified in the available records. ERIS reported this site to be 2 feet away, however it is actually 245 feet away.	Low
2	Exxon Gas Station 4040 Powder Mill Rd Beltsville MD 20705	5	<p>RCRA-CESQG/VSQG, FIND/FRS, ICIS – Minor air permit, permitted RCRA-VSQG, no violations.</p> <p>SPILLS – Three spills of less than 2 gallons have been reported at the facility.</p> <p>UST, OCP – The gas station has four active petroleum fuel UST ranging in size from 8,000-gallons to 12,000-gallon and one former 1,000-gallon used oil UST associated with the facility. Three closed OCP cases have been opened at the site.</p> <p>1991 – A 1,000-gallon waste oil UST was excavated and removed from the site. No impacted soils or odors were observed in the excavation. A PID reading from the soil from the excavation was recorded at 1.0 ppm. A soil sample was collected two feet below the grade of the UST, which was non-detect from BTEX, TPH, and naphthalene.</p> <p>1998 – Four hydraulic vehicle lifts were removed from the site, as well as retrofitting the onsite USTs, product piping, and dispenser islands. Approximately 135 tons of soil from the dispenser island trenches was excavated and disposed of offsite.</p> <p>2000 – A reported petroleum release from one of the regular gasoline USTs was reported, the product lines and tank were tested for tightness and passed. Four monitoring wells were installed around the tank area. No free product was observed in any of the wells. The maximum benzene concentration was detected at 433 ug/l and BTEX at 12,205 ug/l in MW-4, in the central portion of the site. Based on groundwater depth gauging, groundwater is flowing northwest to southeast, potentially beneath the southwestern portion of the LOD.</p>	High

Project Area Site Descriptions

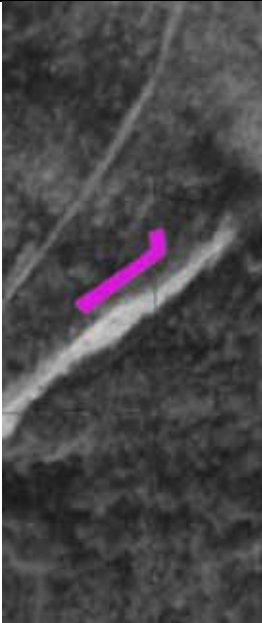

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
3,5	Sheraton Hotel 4095 Powder Mill Rd Beltsville MD 20705	565	<p>FIND/FRS – Air permit, no violations.</p> <p>ALT FUELS – Electric vehicle charging station registered to the site.</p> <p>OCP, UST – The hotel facility has one currently in-use 600-gallon diesel UST installed in 1999 and one 550-gallon diesel UST that was removed in 1999. According to available information no impacted soil was encountered during the removal of the UST. Soils from 2 feet below the grade of the UST were screen with a PID, which recorded a reading of 7.6 ppm. Two confirmation soil samples were collected from each end of the excavation and analyzed for TPH-DRO, which were both non-detect and the case was closed.</p> <p>Based on the local topography, the site appears downgradient of the LOD.</p>	Low
4	Ramada Inn 4050 Powder Mill Rd Beltsville MD 20705	455	OCP – An OCP case was opened in November 1995 due to a commercial heating oil tank being closed. The case was closed one month later in December 1995. No release or cleanup activities were identified.	Low
6360	Calverton Shopping Center Powder Mill Road and Beltsville Dr Beltsville MD 20705	108	SHWS, VCP – The site is a commercial strip shopping center that features a currently active dry cleaner. A Phase I Environmental Site Assessment was completed in March 2012. During a Phase II Subsurface Investigation soil and groundwater samples were collected next to Calverton Dry Cleaners tenant space. The samples were revealed to contain volatile organic compounds in both the groundwater above the department's cleanup standards. Per 2/24/2017 letter, the Department approved proposed groundwater sampling on an annual schedule and restricted to PCE and its breakdown products. Per a letter from February 2019, MDE stated that groundwater sampling may be discontinued. Based on available information, impacts from the former dry-cleaner are believed to be isolated to the its surrounding area, approximately 345 feet crossgradient of the LOD. A PIA request was submitted to MDE for further information on the site; however, MDE did not have any files available at the time of this review.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along Powder Mill Road (MD 212), at the interchange between I-95 south and MD 212 west, in Beltsville Maryland. The area surrounding the LOD was primarily forest land up until the 1970s when the land was cleared for commercial development and the construction of I-95. The area surrounding the LOD has been observed in its current configuration since 2005. Two sites were identified on the FINDS/FRS, UST, OCP, SPILLS and/or RCRA LQG databases. These sites include SHA Bridge 1620500 located 551 feet to the east, and an Exxon gas station located 624 feet to the southwest. Based on the distances and statuses of these cases, impacts to the LOD are unlikely.</p>

2	SHA Bridge 1620500 MD 212 Over I-95 Beltsville MD 20703	551	<p>RCRA LQG, FINDS/FRS – Generation of lead, likely associated with lead abatement activities for bridge maintenance, no violations noted.</p> <p>SPILLS – Multiple records, all related to motor vehicle incidents. In October 2016 an unknown amount of diesel fuel was released from an overturned tractor trailer. In August 2016 an unknown amount of diesel was released from a vehicular accident. In September 2015, 2,000 gallons of asphalt was released from a tanker truck. The spill was contained and cleaned up.</p> <p>OCP – An OCP case was opened in November 1975 and was closed three days later. No other information was available.</p>	Low
3	Exxon Gas Station 4040 Powder Mill Rd Beltsville MD 20705	624	<p>UST – Four active USTs on-site, including one 12,000-gallon gasohol UST, one 10,000-gallon gasohol UST, one 8,000-gallon gasohol UST, and one 10,000-gallon diesel UST. In additional, a 1,000-gallon used oil UST was excavated and removed in November 1991.</p> <p>SPILLS – In October 2020, an unknown amount of diesel fuel was released due to a pump malfunction. The spill was contained in a catch pan. In May 2019, a spill of approximately 1 gallon of gasoline occurred after a vehicle struck a pump. The spill was contained and cleaned up. In April 2017, a spill of less than a gallon occurred when a nozzle fell out of the cradle. The spill was contained and cleaned up.</p> <p>OCP – Four OCP cases are associated with this facility. In August 2015, a case was opened in relation to an inventory issue. No release or cleanup activities were reported and the case was closed in February 2019. In January 2000, a tank failed a tank test. A release and cleanup activities were reported. The case was closed in August 2001. In August 1998, a case was opened in relation to a tank closure. No release or cleanup activities were reported, and the case was closed in May 1999. The final OCP case, opened in October 1991, also related to a tank closure. Although o release or cleanup activities were reported, it wasn't closed until May 1999.</p> <p>FINDS/FRS, RCRA CESQG – No violations were identified in the available records.</p>	Low

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	South side of Sandy Spring Road, south of Dino Drive	
City	Burtonsville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Sandy Spring Road (MD 198), south of Dino Drive, in Burtonsville, Maryland. The surrounding area is mixed use residential/commercial. The surrounding area was primarily agricultural fields with scattered residential properties until the 1960s when residential development began and continued through the 1980s. In approximately 1989, construction of commercial structures to the west occurred along with the conversion of Sandy Spring Road into a four-lane roadway. Following this development, the surrounding area was observed in its current configuration. Two facilities to the southeast were flagged for being listed on one or more environmental database. A residential dwelling located 420 feet from the LOD, was listed in the OCP database for the closure of a heating oil tank. The OCP case was closed six weeks later. The Silver Spring Moose Lodge located 785 feet from the LOD, was listed on the FINDS/FRS, OCP and UST databases for the removal of a 550-gallon UST and a 1,000-gallon heating oil UST. Impacted soils were encountered and addressed during removal of the 550-gallon UST. Both OCP cases associated with this lodge have been closed. Based on the distances and case statuses, impacts to the LOD from these facilities are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Sandy Spring Road (MD 198), north of Bond Mill Road, in Burtonsville, Maryland. The surrounding area is primarily residential and forested/vacant land. Residential properties are located to the east of the LOD. The surrounding area was primarily forested and agricultural land up until the 1950s when residential development began to the east of the LOD. Residential development continued up until approximately 1989 when the surrounding area was observed in its current configuration. A former concrete facility is located approximately 165 feet south (downgradient) of the LOD. The facility appears to have been active from the 1960s to 1980s, based on historical imagery. The site reportedly had one 4,000-gallon diesel and one 2,000-gallon gasoline UST excavated and removed on 4/12/1994. The 2,000-diesel UST was found to be in good condition and there was no sign of release occurring. The 4,000-gallon diesel UST was found to be in poor condition and perforations were observed on the tank, as well as impacted soil and perched groundwater with a sheen were observed in the excavation. The MDE inspector onsite requested that petroleum impacted water and soil in the diesel excavation be removed from the site and TCLP sample be collected to determine how to properly dispose of the material. Based on the results, only levels of petroleum constituents were detected in the material. However, there is no record that confirmation samples were collected from the excavations. The case was received closure from MDE approximately 3 months later. Based on historical imagery, the USTs were most likely located approximately 530 feet crossgradient of the LOD. Based on distance and hydraulic direction, impacts to the LOD are unlikely.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,2	LAUREL CONCRETE PRODUCTS/ ROUTE 198 & GUNPOWDER	165	FINDS/FRS, OCP, UST – One 4,000-gallon diesel and one 2,000-gallon gasoline UST were excavated and removed from the ground on 4/12/1994. The 2,000-diesel UST was found to be in good condition and there was no sign of release occurring. The 4,000-gallon diesel UST was found to be in poor condition and perforations were observed on the tank, as well as impacted soil and perched groundwater with a sheen were observed in the excavation. The MDE inspector onsite requested that petroleum impacted water and soil in the diesel excavation be removed from the site and TCLP sample be collected to determine how to properly dispose of the material; however, there is no record that confirmation samples were collected from the excavations. Based on historical imagery, the USTs were most likely located approximately 530 feet crossgradient of the LOD.	Low
3	LAUREL BLOCK CORP. 5800 SANDY SPRING ROAD	545	UST – A 3,000-gallon gasoline UST was excavated and removed from the site in November 1998. The database search report did not state whether a release occurred; however, based on further review on MDE OCP's website, impacted material was encountered and cleaned-up/remediated. The case was closed a little over a year later in December 1999. Based on the local topography, the site appears downgradient of the LOD.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1964	The surrounding area is primarily forested and agricultural land. Residential properties are observed to the east. The concrete facility is observed to the south	Aerial
1989	Substantial residential development is observed to the east. A commercial property is observed to the north. Sandy Spring road has been converted into a four-lane roadway. The concrete facility to the south appears to be inactive.	Aerial
2018	The LOD and surrounding area are observed in the current configuration.	Aerial

Quadrant:	SW
Watershed:	WAS
Street Address/Nearest Cross Streets	Along Baltimore Avenue, northeast of Circle Drive
City	Beltsville
County	Prince George's
Type of property	ROW
Ranking Rationale Site Summary	
<p>The LOD is along the eastern side of Baltimore Avenue (US Route 1), northeast of Circle Drive, in Beltsville, Maryland. The surrounding area was observed to be developed with commercial and retail businesses beginning in the 1940s. This type of development continued in the immediate area up until 1981, when the surrounding area was observed in its current configuration. Several sites in close proximity to the LOD have reported releases and/or former USTs, including a nearby active gas station 160 feet east and former gas station 75 feet northwest, and two dry cleaners (one active, one inactive) within an adjacent shopping center to the north with historical subsurface chlorinated solvent contamination. The former gas station, currently an AutoZone, previously had three 10,000-gallon gasoline USTs excavated and removed in 2011. PID readings from the soils excavated, as well as soil below the grade of the former UST was screen with a PID, were non-detect. Soil sample were collected, which did not indicate any substantial subsurface impacts. A Phase II site assessment by the current owner identified gasoline-impacted soil and groundwater near the former tank field, but samples collected closest to the LOD were non-detect, indicating the impacts were localized to the former tank field. Based on this, impacts to the LOD from this gas station is unlikely. The WaWa gas station approximately 160 feet to the southeast was constructed around 2010 and has four 15,000-gallon gasoline USTs. Previously, another gas station was situated on the site up until 1999 and had 3 gasoline USTs ranging in size from 2,000- to 3,000-gallons. No records were identified with the previous gas station that was located at the site. Due to the lack of information on this former gas station, as well as its distance from the LOD, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,5	BP / AMOCO STATION # 00797 / 10430 BALTIMORE BOULEVARD	75	<p>FINDS/FRS, ICIS – NPDES permit, minor air permit.</p> <p>UST, OCP – The site is a former gas station that has had nine petroleum USTs ranging in size from 1,000 gallons to 10,000 gallons, all of which were excavated and removed from the ground between 1988 and 2011. Two OCP cases were opened in November 2004, which was closed in April 2006; and December 2011, which was closed in January 2012.</p> <p>2011 – The gas station was closed and three 10,000-gallon gasoline USTs were excavated and removed from the site. PID readings from the soils excavated, as well as soil below the grade of the former UST was screen with a PID, which were recorded at 0.0 ppm. Soil sample were collected, which did not indicate any substantial subsurface impacts. A Phase II site assessment was conducted by the entity proposing to convert the property into an AutoZone automotive parts retail facility. Nine soil borings, two groundwater samples, and two soil vapor samples were collected from the site. Based on the analytical results, benzene exceeded its corresponding action levels for soil and groundwater from the samples near former tank field. Naphthalene exceeded its corresponding action level for groundwater in the sample near the tank field. Both petroleum constituents were non-detect in the sample to the south, nearest the LOD</p>	Low
2	DBA RITE AID # 3803 / 10456 BALTIMORE AVE	25	FINDS/FRS, RCRA-VSQG – No violations. The site was listed as being 25 feet north of the LOD; however, based on further review, the site is approximately 315 feet northeast (crossgradient) of the LOD.	Low
3	10424 BALTIMORE AVE	45	SPILLS – A spill of approximately 3 gallons of sewage was reported in August 2016. Sewage is not considered a contaminant of concern for this evaluation.	Low
4	PETCO STORE #766 / 10464 BALTIMORE AVE	370	FINDS/FRS, RCRA-VSQG – No violations. The site was listed as being 65 feet north of the LOD; however, based on further review, the site is approximately 370 feet northeast (crossgradient) of the LOD.	Low

Project Area Site Descriptions

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
6,9,16	NEIL'S CLEANERS / 10474 BALTIMORE BOULEVARD/	275 to 615	DRYCLEANERS, FED DRYCLEANERS, FINDS/FRS, RCRA-VSQQ – The site (No. 033-0781) is identified as an Inactive drycleaner. There are no reported violations associated with the cleaners. The site was listed as being 25 feet north of the LOD; however, based on further review, the site is approximately 390 feet northeast (crossgradient) of the LOD.	Low
	MISTRYS COMMERCIAL LAUNDROMAT / 10482 BALTIMORE BLVD		FINDS/FRS, RCRA-SQG – No violations. The site was listed as being 50 feet north of the LOD; however, based on further review, the site is approximately 470 feet northeast (crossgradient) of the LOD.	
	CHESTNUT HILL SHOPPING CENTER / 10452 BALTIMORE BOULEVARD		DSHW, SHWS – The shopping center contains two drycleaner tenant spaces (one active, one inactive). A case was opened in 1997 when soil and groundwater testing was the late 1990s and found hot spots of sub-slab soil and groundwater contamination of chlorinated solvents. The site was delisted as a potentially hazardous waste site in 2008. Based on local topography and the distance of the facility from the LOD, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	
7,8	EXXON / 10405 BALTIMORE AVENUE	150	FINDS/FRS, ICIS, OCP, RCRA-SQG, SPILLS, UST – The site is an active gas station with three 10,000-gallon in-use USTs and two former 1,000-gallon USTs that were excavated and removed from the ground in April 1991. Four OCP cases are associated with past releases from the site, all of which have been closed. OCP Case No. 98-0579PG2 was opened in September 1997 and closed in October 1997, which indicates no releases or cleanup was required; therefore, impacts to the LOD are unlikely. Numerous spills have been reported associated with leaks from automobiles and dispenser equipment. However, based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
10	WAWA FOOD MARKET 593 / 10515 BALTIMORE AVENUE	160	FINDS/FRS, ICIS, OCP, RCRA-SQG, SPILLS, UST – The site is active gas station that has had seven petroleum USTs ranging in size from 2,000 gallons to 15,000 gallons. Three USTs were excavated and removed from the ground in June 1999. Four USTs were installed in October 2010 as part of the construction of the current Wawa gas station. Two OCP cases are associated with installation and inspection of the active USTs on Wawa's property, and are not associated with releases. A spill of gasoline was reported in June 2015 when a car tank leaked fuel. The spill was cleaned up by Wawa personnel. No records were identified with the previous gas station that was located at the site. Based on surface topography, the site appears to be up- to crossgradient of the LOD. Thus, subsurface impacts to the LOD cannot be ruled out.	Moderate

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Eastern side of Columbia Pike, north of Musgrove Road	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the eastern side of Columbia Pike (US Route 29), north of Musgrove Road and south of Fairland Road, in Silver Spring, Maryland. The surrounding area was primarily agricultural and residential properties up until the 1960s, when commercial and additional residential developed began to increase. The surrounding area was observed in its current configuration by 1989. Two commercial structures currently owned by Verizon are to the east and west of the LOD. The property to the east has had eight USTs registered to the site over the years that ranged in size from 10,000-gallons to 25,000-gallons. Currently two active 25,000-gallon kerosene USTs are located approximately 200 feet east of the LOD. Seven OCP cases, three of which had known releases and cleanups have been opened at the site; however, based on a review of available files provided by MDE, no substantial releases have occurred at the property. As of 2009, the facility was listed as having three 5,000-gallon diesel ASTs, one 50-gallon diesel AST, one 500-gallon used oil AST, and one 600-gallon diesel AST on site. The Verizon property approximately 270 feet to the west had one 1,000-gallon fuel UST excavated and removed from the site in 1997. According to available documents, no release or remediation was reported with the UST closure. A PIA request was submitted to MDE for further information; however, MDE responded stating that file had been destroyed per MDE’s file retention policy. Based on historical imagery, the former UST was most likely located on the western side of the facility, at least 460 feet from the LOD. As of 2014, the facility had three 5,000-gallon diesel ASTs and one 660-gallon diesel AST present on site. Based on the information reviewed no substantial environmental concerns were present on either site. Thus, impacts to the LOD are unlikely.</p>

1,2	Verizon/ 13101 Columbia Pike	50	<p>AST – In 2009, the facility was listed as having three 5,000-gallon diesel ASTs, one 50-gallon diesel AST, one 500-gallon used oil AST, and one 600-gallon diesel AST on site. No violations associated with the ASTs were identified in the available files reviewed.</p> <p>SPILLS, ERNS – Approximately 100-gallons of ethylene glycol was released onto the ground due to a defective hose part of the radiator on a standby diesel emergency generator.</p> <p>FINDS/FRS – The facility is listed a RCRA generator; however, it is unknown if the facility is still actively permitted.</p> <p>OCP, UST – The facility is located approximately 150 west of the LOD. Eight USTs are registered to the site ranging in size from 10,000-gallons to 25,000-gallons. Currently two 25,000-gallon kerosene USTs are currently active onsite. Seven OCP cases, three of which had known releases and cleanups have been opened at the site.</p> <p>1990 – A 25,000-gallon heating oil UST failed a tank tightness test. It was believed that the landscapers had punctured the vent line when planting a nearby tree; however after further investigation, the release was a result of a loose flex connector fitting. Approximately 50 to 60 gallons was believed to have been released. The material was hand bailed from a nearby tank monitoring well over the course of several weeks, until product was no longer recoverable. A groundwater sample was collected from the monitoring well and analyzed for TPH (34 mg/l) and naphthalene (47 ug/l). In October 1990, a 550-gallon gasoline UST was excavated and removed from the site. No odors, sheens, or impacted soil was observed in the excavation; therefore, the MDE inspector instructed the excavation to be backfilled. The case involving both USTs was closed in October 1990</p> <p>1992 – A surficial release of less than 50-gallons of hydraulic fluid associated with the facility's elevator system occurred. Approximately 250-gallons of groundwater mixed with hydraulic oil, along with 9 gallons of free product were</p>	Low

1,2	Verizon/ 13101 Columbia Pike (Cont.)	50	<p>recovered from the elevator jack assembly shaft. Approximately 22 cubic feet of impacted sand from the shaft was also excavated and removed from the site. Some material was left in-place due to constraints of the existing building; however, it is believed that the majority of the material was recovered. In 1998, the elevator hydraulic lift was found to have leaked approximately 15-gallons of hydraulic oil. Another eleven 55-gallon drums of impacted material was removed from the casing and disposed of offsite. The hydraulic lift was installed and the case was closed. In 2002, a maintenance employee notice that approximately 30 to 40 gallons of hydraulic fluid had been lost in the hydraulic elevator lift again. Based on further investigation, it was determined that the material was isolated to the hydraulic lift shaft. The material was removed, hydraulic lift reinstalled and the case was closed.</p> <p>1995 – Two 10,000-gallon UST and two 15,000-gallon USTs that had previously stored kerosene were washed out and converted to emergency water storage tanks. Soil samples were collected via soil borings from below the grade of the UST and analyzed for benzene (non-detect), toluene (non-detect to 3 ug/kg), ethylbenzene (non-detect), xylenes (non-detect to 3 ug/kg), naphthalene (non-detect to 1690 ug/kg), and TPH (non-detect to 347 mg/kg). The detections of TPH at 347 mg/kg and naphthalene at 1690 ug/kg were detected in a soil sample collect off the northwest corner of UST #1. Based on the analytical data, impacts appear to isolate to that area.</p> <p>2009 - A UST onsite failed a tank tightness test. No other information was provided on the matter.</p> <p>Based on the local topography, the site appears approximately 150 feet downgradient of the LOD.</p>	Low
3,4	Chesapeake Complex (GLC-05119) 13100 Columbia Pike	140	<p>ICIS, FINDS/FRS – Registered minor air permit, minor air synthetic permit, RCRA-CESQG, compliance activity, RCRA-SQG</p> <p>AST – As of 2014, the facility had three 5,000-gallon diesel ASTs and one 660-gallon diesel AST present on site.</p> <p>UST, OCP - One 1,000-gallon fuel UST, that was closed in 1997, according to available documents, no release or remediation was reported with the closure of the UST. A PIA request was submitted to MDE for further information. MDE responded to the PIA request stating that file had been destroyed per MDE's file retention policy. Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Central median of Columbia Pike, north of Musgrove Road	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Columbia Pike (US Route 29), north of Musgrove Road and south of Fairland Road, in Silver Spring, Maryland. The surrounding area was primarily agricultural and residential properties up until the 1960s, when commercial and additional residential developed began to increase. The surrounding area was observed in its current configuration by 1989. Two commercial structures currently owned by Verizon are to the east and west of the LOD. The property to the east has had eight USTs registered to the site over the years that ranged in size from 10,000-gallons to 25,000-gallons. Currently two active 25,000-gallon kerosene USTs are located approximately 200 feet east of the LOD. Seven OCP cases, three of which had known releases and cleanups have been opened at the site; however, based on a review of available files provided by MDE, no substantial releases have occurred at the property. As of 2009, the facility was listed as having three 5,000-gallon diesel ASTs, one 50-gallon diesel AST, one 500-gallon used oil AST, and one 600-gallon diesel AST on site. The Verizon property approximately 140 feet to the west had one 1,000-gallon fuel UST excavated and removed from the site in 1997. According to available documents, no release or remediation was reported with the UST closure. A PIA request was submitted to MDE for further information; however, MDE responded stating that file had been destroyed per MDE’s file retention policy. Based on historical imagery, the former UST was most likely located on the western side of the facility, at least 355 feet from the LOD. As of 2014, the facility had three 5,000-gallon diesel ASTs and one 660-gallon diesel AST present on site. Based on the information reviewed no substantial environmental concerns were present on either site. Thus, impacts to the LOD are unlikely.</p>

1,2	Verizon/ 13101 Columbia Pike	200	<p>AST – In 2009, the facility was listed as having three 5,000-gallon diesel ASTs, one 50-gallon diesel AST, one 500-gallon used oil AST, and one 600-gallon diesel AST on site. No violations associated with the ASTs were identified in the available files reviewed.</p> <p>SPILLS, ERNS – Approximately 100-gallons of ethylene glycol was released onto the ground due to a defective hose part of the radiator on a standby diesel emergency generator.</p> <p>FINDS/FRS – The facility is listed a RCRA generator; however, it is unknown if the facility is still actively permitted.</p> <p>OCP, UST – The facility is located approximately 150 west of the LOD. Eight USTs are registered to the site ranging in size from 10,000-gallons to 25,000-gallons. Currently two 25,000-gallon kerosene USTs are currently active onsite. Seven OCP cases, three of which had known releases and cleanups have been opened at the site.</p> <p>1990 – A 25,000-gallon heating oil UST failed a tank tightness test. It was believed that the landscapers had punctured the vent line when planting a nearby tree; however, after further investigation, the release was a result of a loose flex connector fitting. Approximately 50 to 60 gallons was believed to have been released. The material was hand bailed from a nearby tank monitoring well over the course of several weeks, until product was no longer recoverable. A groundwater sample was collected from the monitoring well and analyzed for TPH (34 mg/l) and naphthalene (47 ug/l). In October 1990, a 550-gallon gasoline UST was excavated and removed from the site. No odors, sheens, or impacted soil was observed in the excavation; therefore, the MDE inspector instructed the excavation to be backfilled. The case involving both USTs was closed in October 1990</p> <p>1992 – A surficial release of less than 50-gallons of hydraulic fluid associated with the facility's elevator system occurred. Approximately 250-gallons of groundwater mixed with hydraulic oil, along with 9 gallons of free product were</p>	Low

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in the central median of Columbia Pike (US Ro29), south of Industrial Parkway in Silver Spring, Maryland. Residential properties and forested land are located to the north and west, townhouses to the south, and commercial properties to the east, along with additional residential properties. The surrounding area was observed to primarily agricultural, with some residential development interspersed throughout up until the 1970s, when additional residential development was observed to the north, along with additional commercial development to the east and south. By 1988 the surrounding area was observed to be developed in its current configuration. One spill case (530 feet south) and one UST case (365 feet north) were identified near the LOD; however, there was no release identified with UST to the north and the 15 gallons that were released associated with the spill case to the south was reportedly addressed. Thus, impacts to the LOD from these incidents are unlikely.</p>

Ranking Rationale Site Summary		
The LOD is located along the central median of I-95, immediately west of the Old Gunpowder Road overpass, in Beltsville, Maryland. The surrounding area is composed of forested land, residential properties, and agricultural fields. The surrounding area was observed to be primarily forested and agricultural up until the late 1960s/early 1970s, when I-95 was constructed. Additional residential development to the north and east continued up until the late 1980s, when the surrounding area was observed in its current configuration. One record of concern was identified, a 15-gallon release of heating oil from a supply truck, approximately 390 feet from the LOD, which was reportedly cleaned up. Based on the distance, impacts to the LOD from this incident are unlikely.

LOD ID: WAS-2555	Site Rank: Moderate	Figure Location: 
Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	South side of the south-bound I-95 onramp	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of the south-bound I-95 onramp from in Beltsville, Maryland. The surrounding area is primarily commercial, with I-95 is located to the east. The area was primarily vacant forested land up until the late 1960s/early 1970s when I-95 was constructed. Four sites listed on one or more environmental database were identified in the surrounding area. Of these, the most concerning is a gas station located 180 feet to the northwest. This active gas station has four active petroleum USTs ranging in size from 8,000-gallons to 12,000-gallons and one former 1,000-gallon used oil UST. In 1998, four hydraulic vehicle lifts were removed from the site, as well as retrofitting the onsite USTs, product piping, and dispenser islands. Approximately 135 tons of soil from the dispenser island trenches was excavated and disposed of offsite. In 2000, a petroleum release from one of the regular gasoline USTs was reported. Four monitoring wells were installed around the tank area. No free product was ever observed, but the March 2001 groundwater sampling results identified dissolved BTEX concentrations as high as 12,205 µg/l in the central portion of the site. The case received closure from MDE in August 2001. Although MDE closed the OCP case, impacted groundwater may remain which could have migrated beneath the LOD. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in a median between southbound I-95 and the exit ramp for Powder Mill Road in Beltsville, Maryland. Residential properties are observed to the west, I-95 to the north and south, and commercial properties to the east, beyond I-95. The surrounding area was primarily agricultural and forested land up until the later 1960s/early 1970s, when I-95 was constructed. The surrounding area was observed in its current configuration by 1988. No records of concern were identified during this environmental review.</p>

Street Address/Nearest Cross Streets	Southwestern portion of I-95 and Maryland State Route 200 interchange	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located at the southwestern portion of the I-95 and Maryland State Route 200 interchange in Beltsville, Maryland. The surrounding area is primarily vacant forested land and roadway infrastructure. The surrounding area was primarily a gravel mine up until the late 1960s/early 1970s when I-95 was constructed. Maryland State Route 200 and the interchange were constructed in approximately in approximately 2009 and completed by 2013. No records of concern were identified during this environmental review.

LOD ID: WAS-2559	Site Rank: Moderate
Quadrant:	SW
Watershed:	WAS
Street Address/Nearest Cross Streets	Along Baltimore Avenue, northeast of Circle Drive
City	Beltsville
County	Prince George's
Type of property	ROW
Ranking Rationale Site Summary	
<p>The LOD is along the eastern side of Baltimore Avenue (US Route 1), northeast of Circle Drive, in Beltsville, Maryland. The surrounding area was observed to be developed with commercial and retail businesses beginning in the 1940s. This type of development continued in the immediate area up until 1981, when the surrounding area was observed in its current configuration. Several sites in close proximity to the LOD have reported releases and/or former USTs, including a nearby active gas station 60 feet northeast and former gas station 60 feet northwest, and two dry cleaners (one active, one inactive) within an adjacent shopping center to the north with historical subsurface chlorinated solvent contamination. The former gas station, currently an AutoZone, previously had three 10,000-gallon gasoline USTs excavated and removed in 2011. PID readings from the soils excavated, as well as soil below the grade of the former UST was screen with a PID, were non-detect. Soil sample were collected, which did not indicate any substantial subsurface impacts. A Phase II site assessment by the current owner identified gasoline-impacted soil and groundwater near the former tank field, but samples collected closest to the LOD were non-detect, indicating the impacts were localized to the former tank field. Based on this, impacts to the LOD from this gas station is unlikely. The WaWa gas station approximately 60 feet to the northeast was constructed around 2010 and has four 15,000-gallon gasoline USTs. Previously, another gas station was situated on the site up until 1999 and had 3 gasoline USTs ranging in size from 2,000- to 3,000-gallons. No records were identified with the previous gas station that was located at the site. Due to the lack of information on this former gas station, as well as its distance from the LOD, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,4,14	NEIL'S CLEANERS / 10474 BALTIMORE BOULEVARD/ MISTRYS COMMERCIAL LAUNDROMAT / 10482 BALTIMORE BLVD CHESTNUT HILL SHOPPING CENTER / 10452 BALTIMORE BOULEVARD	390 to 470	DRYCLEANERS, FED DRYCLEANERS, FINDS/FRS, RCRA-VSQG – The site (No. 033-0781) is identified as an Inactive drycleaner. There are no reported violations associated with the cleaners. The site was listed as being 25 feet north of the LOD; however, based on further review, the site is approximately 390 feet northeast (crossgradient) of the LOD. FINDS/FRS, RCRA-SQG – No violations. The site was listed as being 50 feet north of the LOD; however, based on further review, the site is approximately 470 feet northeast (crossgradient) of the LOD. DSHW, SHWS – The shopping center contains two drycleaner tenant spaces (one active, one inactive). A case was opened in 1997 when soil and groundwater testing was the late 1990s and found hot spots of sub-slab soil and groundwater contamination of chlorinated solvents. The site was delisted as a potentially hazardous waste site in 2008. Based on local topography and the distance of the facility from the LOD, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
2	PETCO STORE #766 / 10464 BALTIMORE AVE	25	FINDS/FRS, RCRA-VSQG – No violations. The site was listed as being 25 feet north of the LOD; however, based on further review, the site is approximately 315 feet northeast (crossgradient) of the LOD.	Low
3	DBA RITE AID # 3803 / 10456 BALTIMORE AVE	25	FINDS/FRS, RCRA-VSQG – No violations. The site was listed as being 25 feet north of the LOD; however, based on further review, the site is approximately 270 feet northeast (crossgradient) of the LOD.	Low

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
5	BP / AMOCO STATION # 00797 / 10430 BALTIMORE BOULEVARD	60	<p>FINDS/FRS, ICIS – NPDES permit, minor air permit.</p> <p>UST, OCP – The site is a former gas station that has had nine petroleum USTs ranging in size from 1,000 gallons to 10,000 gallons, all of which were excavated and removed from the ground between 1988 and 2011. Two OCP cases were opened in November 2004, which was closed in April 2006; and December 2011, which was closed in January 2012.</p> <p>2011 – The gas station was closed and three 10,000-gallon gasoline USTs were excavated and removed from the site. PID readings from the soils excavated, as well as soil below the grade of the former UST was screen with a PID, which were recorded at 0.0 ppm. Soil sample were collected, which did not indicate any substantial subsurface impacts. A Phase II site assessment was conducted by the entity proposing to convert the property into an AutoZone automotive parts retail facility. Nine soil borings, two groundwater samples, and two soil vapor samples were collected from the site. Based on the analytical results, benzene exceeded its corresponding action levels for soil and groundwater from the samples near former tank field. Naphthalene exceeded its corresponding action level for groundwater in the sample near the tank field. Both petroleum constituents were non-detect in the sample to the south, nearest the LOD.</p>	Low
6	WAWA FOOD MARKET 593 / 10515 BALTIMORE AVENUE	60	<p>FINDS/FRS, ICIS, OCP, RCRA-SQG, SPILLS, UST – The site is active gas station that has had seven petroleum USTs ranging in size from 2,000 gallons to 15,000 gallons. Three USTs were excavated and removed from the ground in June 1999. Four USTs were installed in October 2010 as part of the construction of the current Wawa gas station. Two OCP cases are associated with installation and inspection of the active USTs on Wawa's property, and are not associated with releases. A spill of gasoline was reported in June 2015 when a car tank leaked fuel. The spill was cleaned up by Wawa personnel. No records were identified with the previous gas station that was located at the site. Based on surface topography, the site appears to be up- to crossgradient of the LOD. Thus, subsurface impacts to the LOD cannot be ruled out.</p>	Moderate
7	10424 BALTIMORE AVE	225	<p>SPILLS – A spill of approximately 3 gallons of sewage was reported in August 2016. Sewage is not considered a contaminant of concern for this evaluation.</p>	Low
8	AMOCO #797-TANKS / 10422 BALTIMORE BLVD	240	<p>FINDS/FRS, RCRA-SQG – No violations.</p>	Low

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
9, 10	EXXON / 10405 – 10406 BALTIMORE AVENUE	315	FINDS/FRS, ICIS, OCP, RCRA-SQG, SPILLS, UST – The site is an active gas station with three 10,000-gallon in-use USTs and two former 1,000-gallon USTs that were excavated and removed from the ground in April 1991. Five OCP cases are associated with past releases from the site, with the exception of one case. The five cases have received closure from MDE. Numerous spills have been reported associated with leaks from automobiles and dispenser equipment. However, based on the local topography, the site is crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
11	DISTRICT PHOTO INC / 10501 RHODE ISLAND AVE	460	FINDS/FRS, RCRA-SQG – No violations	Low
12	WONDER BREAD / 10400 BALTIMORE BLVD	490	OCP – OCP Case 90-2275PG was opened and closed in May 1990. There is no indication of observed releases; however, based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
13	JONES, RICK PIANOS / 5209 HOLLAND DRIVE	490	FINDS/FRS – No violations	Low
15	RIVER ROAD IRON AND METAL / 5000 SUNNYSIDE AVE., SUITE 201	550	PRP – The facility is identified as a PRP associated with the Tonolli Corp. NPL site in Pennsylvania. There are no impacts to the site and thus, impacts to the LOD are unlikely.	Low
16	RYDER TRUCK / 10401 RHODE ISLAND AVENUE	555	FINDS/FRS, OCP, RCRA NON-GEN – There were 10 former USTs registered to the site, all of which were excavated and removed from the ground at various times from late 1970s through 1995. Three OCP cases are associated with UST closure all of which have been closed. Based on the local topography, the site appears downgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
17	JIFFY LUBE / 10537 BALTIMORE AVE	570	OCP – OCP Case No. 01-1758PG2 was opened in June 2001 and closed in August 2002, which indicates a release and cleanup was required. Based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
18	7-11 GAS STATION / 10550 BALTIMORE BOULEVARD	580	FINDS/FRS, ICIS, OCP, RCRA-SQG, SPILLS, UST – The site is an active gas station with two 20,000-gallon in-use USTs and three former USTs that were excavated and removed from the ground. Four OCP cases are associated with past releases from the site, all of which have been closed. Based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low

Ranking Rationale Site Summary	
<p>The LOD is along the south side of Baltimore Avenue (US Route 1), northeast of Circle Drive, in Beltsville, Maryland. The surrounding area was observed to be developed with commercial and retail businesses beginning in the 1940s. This type of development continued in the immediate area up until 1981, when the surrounding area was observed in its current configuration. Several sites in close proximity to the LOD have reported releases and/or former USTs, including an active gas station directly south of the LOD, former gas station 155 feet northwest, and two dry cleaners (one active, one inactive) within an adjacent shopping center to the north with historical subsurface chlorinated solvent contamination. The former gas station, currently an AutoZone, previously had three 10,000-gallon gasoline USTs excavated and removed in 2011. PID readings from the soils excavated, as well as soil below the grade of the former UST was screen with a PID, were non-detect. Soil sample were collected, which did not indicate any substantial subsurface impacts. A Phase II site assessment by the current owner identified gasoline-impacted soil and groundwater near the former tank field, but samples collected closest to the LOD were non-detect, indicating the impacts were localized to the former tank field. Based on this, impacts to the LOD from this gas station is unlikely. The WaWa gas station directly south of the LOD was constructed around 2010 and has four 15,000-gallon gasoline USTs. Previously, another gas station was situated on the site up until 1999 and had 3 gasoline USTs ranging in size from 2,000- to 3,000-gallons. No records were identified with the previous gas station that was located at the site. Due to the lack of information on this former gas station, as well as its distance from the LOD, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

Based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely	Low
13	JONES, RICK PIANOS / 5209 HOLLAND DRIVE	410	FINDS/FRS – No violations	Low
14,15	EXXON / 10405 BALTIMORE AVENUE	415	FINDS/FRS, ICIS, OCP, RCRA-SQG, SPILLS UST – The site is an active gas station with three 10,000-gallon in-use USTs and two former 1,000-gallon USTs that were excavated and removed from the ground in April 1991. Four OCP cases are associated with past releases from the site, all of which have been closed. OCP Case No. 98-0579PG2 was opened in September 1997 and closed in October 1997, which indicates no releases or cleanup was required; therefore, impacts to the LOD are unlikely. Numerous spills have been reported associated with leaks from automobiles and dispenser equipment. However, based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
16	DOUG THOMAS PROPERTY / 10601 BALTIMORE AVE	480	OCP – OCP Case No. 89-1513PG was closed in April 1989. There is no indication of observed releases; however, based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
17	AMOCO / BALTIMORE AVE & MONTGOMERY ST	510	OCP – OCP Case 92-3023PG was opened and closed in March 1992. There is no indication of observed releases; however, based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
18	RYDER TRUCK / 10401 RHODE ISLAND AVENUE	580	FINDS/FRS, OCP, RCRA NON-GEN – There were 10 former USTs registered to the site, all of which were excavated and removed from the ground at various times from late 1970s through 1995. Three OCP cases are associated with UST closure all of which have been closed. Based on the local topography, the site appears downgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low
19	WONDER BREAD / 10400 BALTIMORE BLVD	590	OCP – OCP Case 90-2275PG was opened and closed in May 1990. There is no indication of observed releases; however, based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low

Street Address/Nearest Cross Streets	South side of Columbia Pike, east of New Hampshire Avenue	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is a ROW located between Columbia Pike (US Route 29) and Old Columbia Pike, east of New Hampshire Avenue, in Silver Springs, Maryland. The surrounding area can be characterized as mixed-use residential/commercial. Multi-family residential structures are observed to the south, along with a commercial shopping center further to the southwest. A police station along with additional multi-family residential structures and single family residential properties are located to the north. Single-family residential properties are also located to the west, beyond the interchange. A police station, mapped at 250 feet to the west, was listed as having two active petroleum ASTs and a former UST. No impacted material was observed during the closure for the former UST. A surficial spill occurred in 2019 during the filling of an existing AST; however, the released material was cleaned up. An apartment complex, located at least 545 feet south, had a 20,000-gallon heating oil UST that was found to have leaked in 1996. Based on available information, the impacted subsurface material was addressed and the site received closure approximately 13 months later. Based on the local topography, the police department and apartment complex facility appear crossgradient and downgradient, respectively, from the LOD. Thus, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	DOW JONES & COMPANY/ 11501 COLUMBIA PIKE	715	ICIS, RCRA SQG, RCRA TSD – Minor air permit and RCRA SGQ permit, no violations.	Low
2	OAK HILL APARTMENTS/ 11497 COLUMBIA PIKE	545	FINDS/FRS, ICIS, OCP, UST – A 20,000-gallon heating oil UST was excavated and removed from the site in 1996. The UST was found to have impacted subsurface media, which was addressed, and the case was closed approximately 13 months later. Based on aerial photographs, the boiler room that the UST was most likely located near to is approximately 545 feet south (downgradient) of the LOD.	Low
3	MONTGOMERY CO POLICE DEPT 3RD DISTRICT/ 1002 MILESTONE DR	250	ALT FUELS, AST, OCP, UST, SPILLS – A 3,000-gallon diesel UST installed in 2013, was excavated and removed from the facility in 2019. The OCP case associated with the closure stated that no release had occurred. The UST was replaced with a 11,800-gallon compartmentalized AST (E-85 and gasoline). The facility also has a 300-gallon diesel AST. In 2018, a release occurred during the filling the AST. According to available records, the spill was surficial and the material was cleaned up and the case was closed. Based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1959	The surroundings are primarily forested land. Residential development is observed to the north. The interchange to the west is under construction.	Aerial
1971	The surrounding area is developed in its current configuration with the exception of the vacant forested parcel of land north of the LOD, beyond Columbia Pike.	Aerial

Street Address/Nearest Cross Streets	North side of Baltimore Avenue, northeast of Rhode Island Avenue	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is along the northern side of Baltimore Avenue (US Route 1), northeast of Rhode Island Avenue, in Beltsville, Maryland. Commercial structures are present to the north, east and south, while a residential area is to the west. Commercial development began in the 1940s and continued through the 1980s when the surrounding area was observed in its current configuration. An active gasoline station is located 255 feet to the southwest (crossgradient) of the LOD. Ten USTs (5 active, 5 historical) and three closed OCP cases are associated with this gas station. Additional OCP cases were noted 340 feet and 485 feet from the LOD, both in a hydraulically crossgradient direction from the LOD. Finally, ten RCRA generators were mapped as being located between 35 and 510 feet from the LOD; however, none had any documented violations. Based on hydraulic directions and case statuses, impacts to the LOD from these facilities are unlikely.</p>

Street Address/Nearest Cross Streets	Along Baltimore Avenue and St. Mary's Street
City	Beltsville
County	Prince George's
Type of property	ROW
Ranking Rationale Site Summary	
<p>The LOD is along Baltimore Avenue (US Route 1) and St. Mary's Street in Beltsville, Maryland. The surrounding area is developed with commercial and retail businesses with residential areas to the north. Commercial development began in the 1940s and continued through the 1980s when the surrounding area was observed in its current configuration. Fourteen sites listed on one or more environmental databases were identified in the surrounding area. Of these, the most concerning include an MDE VCP site and an active gas station. The VCP site with LUC is located immediately across Baltimore Avenue. Based on a review of MDE files obtained through a PIA request, a No Further Requirements Determination (NFRD) has been issued for the site, which prohibits residential use of the property and also imposes groundwater restrictions due to residual contamination. The gas station is located adjacent to the south. This gas station has been in operation since 1982 and has several closed OCP cases, as well as an open OCP case, relating to tank test failures. In addition, a public complaint was made in 2014 of leaking pumps. Due to the proximity of this facility (adjacent), impacts to the LOD cannot be ruled out. Based on the proximity of these sites to the LOD, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1, 2	JARA PROPERTY ST. MARY'S STREET AND ROUTE 1 (10916 BALTIMORE AVENUE) BELTSVILLE, MD	25	LUC, SHWS, VCP – The site is a SHWS and VCP site (BMI No. MD0836). Based on a review of MDE files obtained via a PIA request, a Phase I ESA was conducted at the site, an unimproved, forested lot, in September 2004. Dumped debris, including four drums and automotive parts, was observed at various locations across the site. Numerous facilities, including gas station and drycleaners, in the vicinity of the site were identified as recognized environmental conditions. A limited subsurface investigation was conducted to evaluate the presence of contamination at the site, and TCE and PCE were detected in groundwater at concentrations above regulatory standards. A second Phase I ESA of the property was conducted in June 2010 and recommended groundwater sampling to evaluate current levels of groundwater contamination. A Phase II ESA was conducted in October 2010 and consisted of groundwater and soil gas sampling. Once again, TCE and PCE were detected above regulatory standards in groundwater. Soil gas samples showed detections of petroleum product and chlorinated solvent constituents, therefore, a human health risk assessment was performed using modelling. An unacceptable risk for the potential for vapor intrusion of PCE into proposed structures was identified. The site was entered into the MDE Voluntary Cleanup Program (VCP) in August 2011. At the request of the MDE, soil gas sampling was then conducted to evaluate the potential for risks related to vapor intrusion into proposed structures at the property. There were no detections above regulatory criteria. On January 23, 2012, a No Further Requirements Determination (NFRD) was issued by MDE. The NFRD limits the use of the property to restricted commercial (Tier 2B) or restricted industrial (Tier 3B) purposes, and prohibits the use of groundwater beneath the property for any reason. An MDE LUC inspection dated 7/17/17 indicated that no use of groundwater was observed. The property has been developed with a commercial structure. Based on the local topography, the site appears to be upgradient of the LOD. An NFRD has been issued for the Site, which has groundwater restrictions, therefore, it is possible that groundwater impacts have migrated beneath the LOD.	High

Project Area Site Descriptions

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
3, 4, 5	BELTSVILLE AMOCO 10901 BALTIMORE AVENUE BELTSVILLE, MD	90	<p>FINDS/FRS, ICIS, OCP, UST – The site is an active gas station with four 10,000-gallon gasohol and diesel USTs in-use and three 8,000-gallon gasoline USTs that were excavated and removed in April 1990. Three of four OCP cases have been closed since the 1990s; however, one OCP Case No. 19-0413PG remains open. Based on a review of MDE files obtained through a PIA request, a spill was reported to MDE on 12/21/2018 due to the tank tightness failure of a 10,000-gallon tank and the tank was reportedly taking on water. There was no prior release from the tank. It was determined that the failure was due to the fill drop tube not properly sealing. The tank passed the test after replacement. However, during a follow-up inspection, MDE identified other issues to be addressed, including broken equipment, maintenance and documentation. On February 19, 2019, a spill report was filed for a tightness failure of a 10,000-gallon UST fill spill bucket. The issue appeared to be related to the drain and there was no indication of a release. MDE required all failed components to be replaced or repaired by March 19, 2019, followed by testing. On March 25, 2019, MDE noted that cracked components had been replaced but testing documentation was outstanding. The test results were submitted later that day, but there are no closure records in the files.</p> <p>On May 1, 2014, a citizen filed a complaint stating the pumps at the gas station were all leaking.</p> <p>The site is located adjacent to and upgradient from the LOD; thus, impacts to the LOD are possible.</p>	High
6	BELTSVILLE STATION, LLC 10920 BALTIMORE BLVD BELTSVILLE, MD	160	<p>FINDS/FRS, ICIS, UST, OCP, RCRA-SQG, SPILLS – The site is identified as an active small quantity generator of ignitable waste, chromium, lead, benzene and PCE. The site is an active gas station with three 12,000-gallon USTs in-use and four USTs of various sizes that were excavated and removed from the ground in between 1991 and 2011. Three OCP cases associated with tank closures have been closed in 2005, 2012, and 2013, respectively, which indicated there were releases that required cleanup activities. A spill of approximately 1 gallon of gasoline was reported in March 2019. Based on the local topography, the site appears crossgradient of the LOD; therefore, impacts to the LOD are unlikely.</p>	Low
7	KENNYS BBQ 10951 BALTIMORE AVENUE BELTSVILLE, MD	195	FINDS/FRS – Air minor, no violations noted.	Low

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is along the eastern side of Baltimore Avenue (US Route 1), north of Sellman Road, in Beltsville, Maryland. The surrounding area is observed to be developed with commercial and retail businesses with residential areas to the north, which began in the 1940s and continued into the early 2000s when the surrounding area was observed in its current configuration. Fourteen facilities in the surrounding area were listed on one or more of the following databases: DRYCLEANERS, FED DRYCLEANERS, RCRA Generator, OCP, FINDS/FRS, UST, ICIS, SPILLS, ERNS, SWHS, VCP, and LUC. Of these, only one site, the Beltsville Dry Cleaners, is located upgradient of the LOD. This former drycleaner was located directly across Baltimore Avenue, at a distance of approximately 250 feet from the LOD. There are no known reported releases, and the facility no longer exists. Based on this, impacts to the LOD from this former facility is unlikely. The remaining 13 facilities are located either crossgradient or downgradient at distances of 220 feet to 660 feet. Based on the distances and hydraulic direction of these 13 sites, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	BELTSVILLE DRY CLEANERS / 11000 BALTIMORE AVENUE (UNIT 111) BELTSVILLE, MD 20705	250	<p>DRYCLEANERS, FED DRYCLEANERS, FINDS/FRS – The site is listed as an inactive drycleaner (ID No. 033-1998). There are no known reported releases.</p> <p>Note: While the database lists this property at 65 feet from the LOD, the building which the former drycleaner was located within is setback on the property. The distance between the LOD and the building is approximately 250 feet. Based on surface topography, the site appears upgradient of the LOD.</p>	Low
2	EXXON / 11055 BALTIMORE AVENUE	220	FINDS/FRS, ICIS, OCP, SPILLS, UST, RCRA-VSQG – The facility is an active gas station with five 12,000-gallon USTs in-use and eight USTs of various sizes that were excavated and removed from the ground between 1969 and 1989. Seven OCP cases associated with the tank closures have been all been closed. Multiple spills have been reported as a result of transfer operations. Based on the local topography, the site appears crossgradient of the LOD.	Low
3	SUPER CLEANERS / 10971 BALTIMORE AVENUE BELTSVILLE, MD 20705	240	DRYCLEANERS, FED DRYCLEANERS, FINDS/FRS, ICIS, RCRA-SQG – The site is listed as an inactive drycleaner (ID No. 033-1763) with chlorinated solvents hazardous waste. Based on the local topography, the site appears crossgradient of the LOD.	Low
4	KENNYS BBQ / 10951 BALTIMORE AVENUE	315	FINDS/FRS – Minor air permit.	Low
5	SHELL / BELTSVILLE STATION, LLC / 10920 BALTIMORE BLVD	355	FINDS/FRS, ICIS, UST, OCP, RCRA-SQG, SPILLS – The site is an active gas station with four 12,000-gallon USTs in-use and three USTs of various sizes that were excavated and removed from the ground in between 1991 and 2011. OCP cases associated with well/groundwater contamination were opened in 2001 and 2007, which were closed in 2005 and 2013, respectively. A third OCP case was opened in 2012 for a new tank installation. In March 2019, a spill of approximately 1 gallon of gasoline was reported. Based on the local topography, the site appears crossgradient of the LOD.	Low
6	POWDER MILL ROAD & BALTIMORE AVENUE	475	ERNS – A caller reported a CSX railcar struck a pedestrian on adjacent railroad tracks in December 2018.	Low
7	JARA PROPERTY / ST. MARY'S STREET AND ROUTE 1	505	LUC, SHWS, VCP – The site is a VCP site (BMI No. MD0836) and groundwater restrictions were put in-place in January 2012. Based on the local topography, the site appears crossgradient of the LOD.	Low
8	HOGS ON THE HILL- BALTIMORE AVENUE / 11102 BALTIMORE AVENUE	515	FINDS/FRS – Minor air permit.	Low

Ranking Rationale Site Summary		
<p>The LOD is along the western side of Baltimore Avenue (US Route 1), north of Sellman Road in Beltsville, Maryland. The surrounding area is observed to be developed with commercial and retail businesses with residential areas to the north, which began in the 1940s and continued into the early 2000s when the surrounding area was observed in its current configuration. Fourteen facilities in the surrounding area were listed on one or more of the following databases: DRYCLEANERS, FED DRYCLEANERS, RCRA Generator, OCP, FINDS/FRS, UST, ICIS, SPILLS, ERNS, SWHS, VCP, and LUC. Of these, only one site, the Beltsville Dry Cleaners, is located upgradient of the LOD. This former drycleaner was in the building immediately west of the LOD, of which the LOD may be considered part of the property. There are no known reported releases, and the facility no longer exists. Based on this, impacts to the LOD from this former facility is unlikely. The remaining 13 facilities are located either crossgradient or downgradient at distances of 130 feet to 650 feet. Based on the distances and hydraulic direction of these 13 sites, impacts to the LOD are unlikely.</p>

Watershed:	WAS	
Street Address/Nearest Cross Streets	West side of Baltimore Avenue, north of Wicomico Avenue	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the western side of Baltimore Avenue (US route 1), north of Wicomico Avenue, in Beltsville, Maryland. The surrounding area was primarily rural agricultural starting from at least the 1940s through the 1970s when additional residential developments began, followed by significant commercial development during the 1970s. The surrounding area was observed in its current configuration by the early 1980s. Twenty five facilities in the surrounding area were listed on one or more of the following databases: UST, OCP, SPILLS, FINDS/FRS, RCRA Generator, DRYCLEANERS, FED DRYCLEANERS, ICIS and HMIRS. Of these, only two were located either immediately adjacent to the LOD or hydraulically upgradient of the LOD. The adjacent Benkie Nurseries (ERIS Site ID #1) facility previously had a 3,000-gallon gasoline UST removed in 1993, a 6,000-gallon heating oil UST removed in 1996, and a 6,000-gallon heating oil UST removed in 1998. The OCP cases assigned for each UST closure event stated releases had not occurred. A former drycleaner (ERIS Site ID #7/15) was located approximately 470 feet from the LOD. No records of releases or RCRA violations were noted. Based on this, impacts to the LOD from these facilities appear unlikely. The remaining 23 facilities were located either cross- or downgradient from the LOD at distances ranging between 225 and 655 feet from the LOD, and are unlikely to have any impact on the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
8	SHADY GROVE RECYCLING / 11268 OLD BALTIMORE AVENUE	295	UST – Two 2,000-gallon USTs (one gasoline, one heating oil) were excavated and removed in November 2002. No other information available. Based on local topography, the site appears crossgradient from the LOD.	Low
9	ADVANCED COLLISION TECHNOLOGY / 11313 MARYLAND AVENUE	295	FINDS/FRS, ICIS, RCRA-VSQG, RCRA NON-GEN – Former generator of reactive and arsenic waste, no violations noted; very small quantity generator of lead, silver, benzene, and halogenated and non-halogenated solvents, no violations noted. Based on local topography, the site appears downgradient from the LOD.	Low
10	BELTSVILLE AUTO RECYCLERS INC / 11331 MARYLAND AVE	330	FINDS/FRS – NPDES permit, enforcement/compliance activity noted. Based on local topography, the site appears crossgradient from the LOD.	Low
11	MARBRO CO., INC. / 11217 MARYLAND AVENUE	330	OCP, UST – Five USTs (3 gasoline, 1 diesel, 1 heating oil) were excavated and removed in September 1998. OCP Case No. 99-0777PG2 associated with these tank closures stated a release and cleanup activities occurred. The OCP case was closed in August 2000. HIST MLTS, MLTS – No information available. Based on local topography, the site appears downgradient from the LOD.	Low
12	ROBINSON PROPERTY / 11405-11409 MARYLAND AVE	330	OCP – Case No. 00-1021PG2, associated with a tank closure in December 1999, noted a release and cleanup activities occurred. The OCP case was closed in April 2000. No other information available. Based on local topography, the site appears crossgradient from the LOD.	Low
13	BELTSVILLE AUTO RECYCLERS INC / 11331 MARYLAND AVE	330	UST – One 2,000-gallon gasoline UST was removed in 1999. No other information available. Based on local topography, the site appears crossgradient from the LOD.	Low
14	STAR CLEANERS / 5057 GARRETT AVE.	460	DRYCLEANERS, FED DRYCLEANERS, FINDS/FRS, ICIS, RCRA-VSQG – The site is identified as an inactive drycleaner (No. 033-2311). A single violation was noted associated with the facilities air permit. Based on local topography, the site appears crossgradient from the LOD.	Low
7, 15	OCEANS DRY CLEANING INC / 5004 HOWARD AVE	470	FED DRYCLEANERS – The site is identified as a drycleaner (FRS ID No. 110020751845). No spills or releases are associated with the site, which no longer appears to operate at this address. RCRA-SQG, FINDS/FRS, ICIS – Generator of halogenated solvents , minor air permit, no violations noted. Based on local topography, the site appears upgradient from the LOD.	Low

Ranking Rationale Site Summary		
<p>The LOD is along the western side of Baltimore Avenue (US Route 1), north of Garrett Avenue, in Beltsville, Maryland. The surrounding area was forested and rural residential in the 1940s. Additional residential development occurred through the 1970s, followed by commercial development to the east. Additional commercial development occurred through the early 1980s when the surrounding area was observed in its current configuration. Seventeen sites listed on one or more environmental database were identified in the surrounding area. The most concerning is an activate gas station with known releases that the LOD potentially located within. Based on a review of MDE files obtained via a PIA request, residual on-site soil contamination is present at the gas station and a gasoline spill occurred as recently as March 2021. In addition, a drycleaning facility is located approximately 65 feet upgradient from the LOD. No files were available from MDE via a PIA request. As the LOD is either adjacent to or within an active gas station site with known impacts, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,2	QUARLES PETROL AUTO CARE CNTR / QUARLES PETROLEUM 11450-11500 BALTIMORE AVE BELTSVILLE, MD	15	<p>FINDS/FRS, ICIS, OCP, UCT, RCRA-VSQG – Site is an active VSQG of benzene. No violations reported.</p> <p>Four former USTs were excavated and removed from the ground in June and July 2013 and two USTs (12,000-gallon gasohol and 12,000-gallon diesel) remain in-use at the active gas station.</p> <p>OCP Case No. 93-0048PG2 was opened in July 1992 during a compliance inspection and was closed in August 2004, and no release was reported. Based on a review of MDE files obtained via a PIA request, two flooded submersible sumps were observed by MDE during a compliance check in July 1992. MDE directed that the systems were to be shut down until the appropriate leak detection systems were installed, testing was completed, and results were submitted to MDE. Subsequent testing showed that the tanks and lines passed, and in August 1992, the owner informed MDE that overfill protection, spill containment and cathodic protection were in the process of being installed. In December 1997, MDE conducted an inspection of the site and discovered that oil-contaminated soils were encountered around the product lines and in the area of the submersible pumps during the upgrade of USTs at the site. At MDE's request, an investigation was conducted and analytical data showed petroleum hydrocarbon contamination in soil. A total of 256.01 tons of impacted soil was removed for off-site disposal. Groundwater investigations indicated the presence of TPH, BTEX and MTBE in groundwater at the site. A groundwater monitoring program was implemented and in August 1998, a request for no further action was submitted to MDE due to the very low concentrations of dissolved phase hydrocarbons on groundwater. On August 11, 2004, MDE completed the Supervisor Closure Review and agreed to close the case.</p> <p>OCP Case No. 97-0213PG2 was open and closed in August 1996 due to a motor/lube oil test failure. No other information was provided. Based on a review of MDE files obtained through a PIA request, during routine tightness testing in May/June 1996, the diesel fuel UST at the site tested tight, but the product line quickly lost pressure. Inventory control records showed no loss of diesel product. It was determined that the diesel fuel tank had two submersible pumps that fed two product islands; however, the tester was not aware of this during the procedure and had not closed off the second line while testing the first line. This resulted in the quick loss of pressure and the test failure. The test was properly repeated in August 1996 and both lines passed.</p>	High

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,2	QUARLES PETROL AUTO CARE CNTR / QUARLES PETROLEUM 11450-11500 BALTIMORE AVE BELTSVILLE, MD (Cont.)	15	<p>OCP Case No. 13-0755PG was opened in June 2013 and closed in December 2015 in connection with a motor/lube tank closure. A release was observed and cleanup activities were required. Based on a review of MDE files, four USTs were removed in June 2013. The tanks were cathodically protected and no perforations were observed. Post-excavation soil sampling showed one exceedance of the regulatory standard for TPH-DRO. However, MDE agreed to closure of the case and required no further action. The MDE files reviewed also contained a spill report for a release of 93 gallons of gasoline which occurred on March 23, 2021 due to a pump malfunction. It was speculated that the spill would be managed through the site's oil-water separator. MDE advised the RP to change all nozzles on the pumps and clean all filters.</p> <p>The LOD is either adjacent to or part of the gas station site. Due to the presence of residual on-site soil contamination as well as a recent gasoline spill, there is a potential for impacts to the LOD.</p>	High
3	STAR CLEANERS 5057 GARRETT AVE. BELTSVILLE, MD	65	<p>DRYCLEANERS, FED DRYCLEANERS, FINDS/FRS, ICIS, RCRA-VSQQ – The site is identified as a very small quantity generator of spent halogenated solvents with no reported violations, and as an inactive drycleaner (No. 033-2311). A Notice of Violation appears to have been issued for the Air Program. No files were available through a PIA request to MDE. The facility appears located upgradient of the LOD.</p>	Moderate
4	11343 MARYLAND AVE BELTSVILLE, MD	135	<p>HMIRS – A spill of 1 gallon of heating oil during unloading was reported in June 2002, which was cleaned up immediately and properly disposed of. Based on local topography, the site appears located downgradient from the LOD and based on the size of the release, impacts to the LOD are unlikely.</p>	Low
5	SB POWER TOOLS INC 5029 GARRETT AV BELTSVILLE, MD	160	<p>FINDS/FRS, RCRA-SQQ – The site is identified as a small quantity generator of ignitable waste, benzene and PCE. No violations are reported.</p>	Low
6, 8	ROBINSON PROPERTY 11405-11409 MARYLAND AVE BELTSVILLE, MD	230	<p>UST, OCP – One 2,000-gallon gasoline UST was installed in 1970 and excavated and removed from the ground in December 1999. OCP Case No. 00-1021PG2 was opened in December 1999 in connection with the tank closure. A release was observed and cleanup activities were required, and the case was closed in April 2000. However, based on local topography, the site appears located downgradient from the LOD and thus, impacts to the LOD are unlikely.</p>	Low
7	BELTSVILLE AUTO RECYCLERS INC 11331 MARYLAND AVE BELTSVILLE, MD	235	<p>FINDS/FRS – ICIS, NPDES Unpermitted. Based on local topography, the site appears located downgradient from the LOD and thus, impacts to the LOD are unlikely.</p>	Low

9	INTERSTATE BRANDS CORP. – BELTSVILLE 11400 BALTIMORE BLVD BELTSVILLE, MD	255	FINDS/FRS, UST, OCP – Four former diesel and used oil USTs were excavated and removed from the ground between 1990 and 1997. OCP Case No. 98-0614PG2 was opened in September 1997 in connection with a tank closure and closed in August 1999. No releases were observed and cleanup activities were not required. Based on the local topography, the site appears located crossgradient from the LOD and thus, impacts to the LOD are unlikely.	Low
10	MARCHANT MACHINE CORP 11325 MARYLAND AVE BELTSVILLE, MD	325	FINDS/FRS, OCP, UST, RCRA-SQG – The site is an active small quantity generator of ignitable waste, barium, PCE and spent nonhalogenated solvents. No violations were reported. Two former heating oil USTs were closed in June 2019 (one excavated and one closed in-place). OCP Case No. 19-0767PG was opened in June 2019 in association with the tank closures and closed in August 2019. A release was reported but there was no cleanup. Based on local topography, the site appears located crossgradient from the LOD and thus, impacts to the LOD are unlikely.	Low
11	ODELL RD AND MARYLAND AVE BELTSVILLE, MD	360	ERNS – Illegal dumping was reported in May 1990. Based on local topography, the site appears located crossgradient from the LOD and thus, impacts to the LOD are unlikely.	Low
12	PRIVATE RESIDENCE 5009 ODELL RD BELTSVILLE, MD	400	SPILLS – Four ounces of oil spilled from a furnace of a private residence in November 2017, which was cleaned up immediately. Thus, impacts to the LOD are unlikely.	Low
13, 18	OCEANS DRY CLEANING 5004 HOWARD STREET BELTSVILLE, MD	445	FED DRYCLEANERS, FINDS/FRS, ICIS, RCRA-VSG – The site is identified as a drycleaner (FRS ID No. 110020751845) and very small quantity generator of PCE and spent halogenated solvents. No violations were reported. No spills or releases are associated with the site. Based on local topography, the site appears located crossgradient from the LOD and thus, impacts to the LOD are unlikely.	Low
14, 16	ALL-STAR USED AUTO PARTS 11501 MARYLAND AVE BELTSVILLE, MD	505	OCP, RCRA-SQG, FINDS/FRS – The site is identified as a small quantity generator of ignitable waste. No violations are reported. OCP Case No. 94-3563PG2 was opened in June 1994 and closed in March 1996. No further information was provided. Based on local topography, the site appears located downgradient from the LOD and, together with the distance from the LOD, impacts to the LOD are unlikely.	Low
15	KENNETH HOLLIDAY 5005 LEXINGTON AVE BELTSVILLE, MD	540	ERNS, OCP – OCP Case No. 04-1193PG2 was opened in January 2004 in association with an oil leak from a residential heating oil AST. The spill was cleaned up immediately and the case was closed in March 2004. Based on local topography, the site appears located crossgradient from the LOD and, together with the distance from the LOD, impacts to the LOD are unlikely.	Low

Ranking Rationale Site Summary		
<p>The LOD is along the western side of Baltimore Avenue (US Route 1), at the intersection of Olympia Avenue, in Beltsville, Maryland. The surrounding area is observed to be forest areas and rural residential in the 1940s. Residential development began and accelerated through the 1970's. Commercial development along Baltimore Avenue occurred in the 1970's and continued through the early 1980's. By the early 1980's the surrounding area was observed to be developed in its current configuration. Seventeen facilities were flagged as being on the SPILLS, HMIRS, ERNS, OCP, UST, RCRA generator, FINDS/FRS, ICIS and/or TRIS databases. The closest incident, a SPILLS case located at 11600 Baltimore Avenue which the LOD appears to be located within, involved the release of antifreeze from a vehicle to the storm sewer. The local fire department was tasked with cleaning. A spill of #2 fuel oil occurred 135 feet from the LOD when an AST was overfilled. A remediation contractor was hired to address the spill impacts. The remaining 15 facilities were all located 300 feet or greater from the LOD. Based on the spill incident volumes, spill response activities or distances from the LOD, none of the 17 flagged facilities are anticipated to have an impact on the LOD.</p>

LOD ID: WAS-2573	Site Rank: Low	Figure Location: 
Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	West side of Baltimore Avenue, north of Quimby Avenue	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is along the western side of Baltimore Avenue (US Route 1), north of Quimby Avenue, in Beltsville, Maryland. The surrounding area is primarily commercial, with residential properties present to the southwest. The area was observed to be grasslands and forested areas through the early 1970s when commercial development began to the east-northeast and residential to the southwest. Additional commercial development to the north and east, and residential development to the southwest, continued through the late 2000s when the surrounding area was observed in its current configuration. A HMIRS case, associated with leaking fire extinguishers, was noted 500 feet from the LOD, and a former RCRA generator was 175 feet from the LOD. Impacts to the LOD from these facilities are unlikely.</p>

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	West side of Baltimore Avenue, north of Ammendale Road	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the west side of Baltimore Avenue (US Route 1), north of Ammendale Road, in Beltsville, Maryland. Baltimore Avenue was constructed prior to 1937, though the surrounding area remained cleared land. Commercial development to the northeast occurred during the 1960s and 1970s, and to the west in the 1980s. The surrounding area was observed in its current configuration in 1995. A commercial property located 90 feet south of the LOD was listed on the RCRA VSQG and HMRIS databases. The HMRIS case involved a small release of corrosive acid following dropping of a package by a FedEx employee. The RCRA VSQG listing had no violations noted. Additional RCRA generators were listed at 115 feet and 230 feet to the south. Based on the incident descriptions or distances from the LOD, impacts to the LOD from these facilities are unlikely.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	KEIGHER FAMILY PARTNERSHIP PROPERTY / 11950 BALTIMORE AVE	40	<p>OCP, UST – One 10,000-gallon gasoline UST was excavated and removed from the ground in July 2011. OCP Case No. 12-0045PG associated with the tank closure was opened in July 2011 and closed in September 2011, which states that no releases were observed and no cleanup activities were required.</p> <p>FINDS/FRS – Minor air permit.</p>	Low
2	MICROS SYSTEMS / 12000 BALTIMORE AVENUE	210	<p>FINDS/FRS, RCRA-SQG – Small quantity generator of spent halogenated solvents, no violations.</p>	Low
3	NCR CORPORATION / 12050 BALTIMORE AVE	495	<p>OCP – OCP Case No. 98-0282PG2 was opened and closed on August 8, 1997. Limited details were available, but a release and cleanup were noted to have occurred. The spill was assigned as “PEPCO spill”, which is the local electrical provider. This indicates it is electrical-related, very likely a transformer.</p> <p>FINDS/FRS – Minor air permit.</p>	Low
4	VICTOR KRAUSE DECORATING CO / 11900 BALTIMORE AVE STE E	650	<p>HMIRS – A spill was reported by FedEx in April 2016 when a corrosive liquid spilled out of a dropped package, cleanup actions undertaken.</p> <p>FINDS/FRS, RCRA-VSQG – Very small quantity generator, no violations noted.</p>	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1959	Baltimore Avenue is present. The surrounding area is primarily undeveloped grassland and forested areas.	Aerial
1981	Commercial developments are observed to the east of Baltimore Avenue and the LOD.	Aerial
1995	Additional commercial development is observed to the north, east, and west. The surrounding area is observed in its current configuration.	Aerial

Ranking Rationale Site Summary		
<p>The LOD is located on the west side of Baltimore Avenue (US Route 1), south of Ritz Way, in Beltsville, Maryland. Baltimore Avenue was constructed prior to 1937, though the surrounding area remained cleared land. Commercial development to the east occurred during the 1960s and 1970s, and to the west in the 1980s. The surrounding area was observed in its current configuration in 1995. The commercial property to the west, which the LOD appears to reside in, was listed as a RCRA small quantity generator of spent halogenated solvents. No violations were noted with this generator. The adjacent property to the north was listed on the OCP database. Limited details were available, but the case was assigned as "PEPCO spill" indicating it was electrical-related, likely a transformer. The OCP case was closed the same day it was opened. The adjacent property to the south was listed on the OCP and UST databases for the removal of a 10,000-gallon gasoline UST in July 2011. The information stated that no release occurred and no cleanup activities were required. Based on the case statuses, impacts to the LOD from these facilities is unlikely.</p>

1	NCR CORPORATION / 12050 BALTIMORE AVE	30	OCP – OCP Case No. 98-0282PG2 was opened and closed on August 8, 1997. Limited details were available, but a release and cleanup were noted to have occurred. The spill was assigned as “PEPCO spill”, which is the local electrical provider. This indicates it is electrical-related, very likely a transformer. The closest transformer on the property to the LOD is located 250 feet to the west, near the building’s loading bays. FINDS/FRS – Minor air permit.	Low
2	KC COMPANY, INC. / 12100 BALTIMORE AVENUE, SUITE 1	225	OCP, UST – Two 8,000-gallon USTs containing gasoline were excavated and removed from the ground in January 1996. OCP Case No. 96-1430PG2 associated with tank closure was opened in January 1996 and closed in March 1996. No indications that a release occurred was noted. FINDS/FRS, ICIS – Enforcement/compliance activity in 1997.	Low
3	MICROS SYSTEMS / 12000 BALTIMORE AVENUE	275	FINDS/FRS, RCRA-SQG – Spent halogenated solvents, no violations. Site appears located hydraulically crossgradient from the LOD.	Low
4	KEIGHER FAMILY PARTNERSHIP PROPERTY / 11950 BALTIMORE AVE	460	OCP, UST – One 10,000-gallon gasoline UST was excavated and removed from the ground in July 2011. OCP Case No. 12-0045PG associated with the tank closure was opened in July 2011 and closed in September 2011, which states that no releases were observed and no cleanup activities were required. FINDS/FRS – Minor air permit.	Low

Ranking Rationale Site Summary		
<p>The LOD is located on the west side of Baltimore Avenue (US Route 1), south of Ritz Way, in Beltsville, Maryland. Baltimore Avenue was constructed prior to 1937, though the surrounding area remained cleared land. Commercial development to the east occurred during the 1960s and 1970s, and to the west in the 1980s. The surrounding area was observed in its current configuration in 1995. The commercial property to the west, which the LOD resides in, was noted on the UST, OCP, FINDS/FRS and ICIS databases. Two 8,000-gallon gasoline USTs were removed in January 1996. No indications a release were noted, and the case was closed five weeks after opening. Further evaluation determined the former USTs were associated with a warehouse located approximately 250 feet west (crossgradient) of the LOD. The FINDS/FRS and ICIS records were associated with compliance / enforcement issues. Based on the location and hydraulic direction of the former USTs, impacts to the LOD are unlikely. Three additional OCP cases were noted at distances of 195 feet, 555 feet and 655 feet from the LOD, all of which have been closed, and a RCRA generator of spent halogenated solvents located 470 feet from the LOD. Based on distances and case statuses, impacts to the LOD from these facilities are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located on the west side of Baltimore Avenue (US Route 1), north of Ritz Way, in Beltsville, Maryland. The LOD is situated between Baltimore Avenue and the Konterra Business Campus, which was constructed in the early 1990s. Baltimore Avenue was constructed prior to 1937, though the surrounding area remained cleared land. Commercial development to the east occurred during the 1960s and 1970s, and to the west in the 1980s. The surrounding area was observed in its current configuration in 1994. Eight facilities in the surrounding area was flagged as being on one or more databases. An OCP case approximately 235 feet to the east (crossgradient), occurred in 1990. No details was available, but the case was closed 8 days after opening. Two OCP cases were associated with another commercial facility 210 feet to the east (crossgradient), one for the installation of a UST in 1990 and the other for its removal in 1995. No indications of a release was noted. The remaining six facilities were 540 feet or greater from the LOD. Based on the case statuses, hydraulic direction, or distances, impacts to the LOD from these facilities are unlikely.</p>

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Northeast interchange of New Hampshire Avenue and Colombia Pike	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies in the ROW between New Hampshire Avenue (MD 650) and the interchange between Columbia Pike westbound and New Hampshire Ave northbound, in Silver Spring, Maryland. New Hampshire Avenue and Columbia Pike have been present since the late 1950s. The area surrounding the LOD was unchanged until construction of the 3rd District Police Station to the north of the LOD in 2013. The police station has reported 2 spill cases related to gasoline deliveries for an onsite AST. The first involved the November 2017 release of 600 gallons of gasoline, which flowed into the nearby landscaped areas and a stormwater bioretention basin. Based on a review of MDE files obtained through a PIA request, impacted soil and water were removed and post-excavation soil sampling analytical results were below regulatory standards. Therefore, MDE closed the case. The second spill involved the release of approximately 100 to 200 gallons of gasohol during a June 2018 delivery. Montgomery County Fire and Rescue responded and the spill was cleaned up with absorbent. No further information was available in the MDE files regarding this spill. In addition, there is an open OCP case related to the closure of a 3,000-gallon diesel UST at the site. According to MDE files, there was no evidence of a release; however, a UST Closure Report was required by January 10, 2020, and no such report was provided in the files. Based on the absence of details on the June 2018 spill at the site and the open OCP case, as well as the proximity of this site to the LOD, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	3 rd District Police Station 1002 Milestone Dr Silver Spring, MD 20904	10	<p>AST, UST, SPILLS, OCP – The 3rd District Police Station is listed as having 2 active ASTs on site. An 11,800-gallon split tank, and a 300-gallon diesel fuel tank. The split tank features an 8,400-gallon portion containing gasoline and a 3,400-gallon portion containing E85 (ethanol). The facility previously contained a 3,000-gallon diesel UST. The UST was installed in August 2013 and excavated and removed from the ground in November 2019.</p> <p>Two Spill cases were identified at the subject property. The first occurred on November 6, 2017 when an unknown amount of gasoline (estimated to be 600 gallons) was released during a fuel delivery to the AST. The delivery driver was not in attendance during the spill. Sorbent pads were applied; however, gasoline ran across the ground and into a nearby dry sediment pond. OCP case No. 18-0234MO was opened on November 6, 2017 in connection with the transfer accident. The release was reported. The case was closed on March 27, 2018. Based on a review of MDE files obtained via a PIA request, overfilling of the gasohol compartment of the 8,400-gallon AST resulted in a release of 600 gallons of product from the emergency vent and vapor recovery system. The local fire department and a nearby contractor responded immediately by spreading absorbent material and sand on the spill. The released material spilled into the landscaped areas on the east and west sides of the AST, then proceeded to flow into the stormwater bioretention basin (SBB) located adjacent to the north of the AST. Impacted soils were excavated in the landscaped areas to depths up to 4.5 feet below grade and in the SBB to depths up to 5 feet below grade. Between November 6 and 7, 2017, 273.04 tons of petroleum-impacted soil and 2,683 gallons of petroleum-impacted water (accumulated water from the excavation and SBB after a rain event) were removed for off-site disposal. Nine post-excavation confirmatory soil samples were collected from the landscaped areas and SBB for VOC and TPH analyses. All analytical results were below applicable regulatory standards. The site is connected to the public water supply. and the case was closed in March 2018.</p> <p>The second spill case occurred on June 19, 2018. Based on a review of MDE files, a release of approximately 100 to 200 gallons of gasohol occurred during a delivery to the AST on</p>	Moderate

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	3 rd District Police Station 1002 Milestone Dr Silver Spring MD 20904	7	<p>AST, UST, SPILLS, OCP – The 3rd District Police Station is listed as having 2 active ASTs on site. An 11,800-gallon split tank, and a 300-gallon diesel fuel tank. The split tank features an 8,400-gallon portion containing gasoline and a 3,400-gallon portion containing E85 (ethanol). The facility previously contained a 3,000-gallon diesel UST. The UST was installed in August 2013 and excavated and removed from the ground in November 2019.</p> <p>Two Spill cases were identified at the subject property. The first occurred on November 6, 2017 when an unknown amount of gasoline (estimated to be 600 gallons) was released during a fuel delivery to the AST. The delivery driver was not in attendance during the spill. Sorbent pads were applied; however, gasoline ran across the ground and into a nearby dry sediment pond. OCP case No. 18-0234MO was opened on November 6, 2017 in connection with the transfer accident. The release was reported. The case was closed on March 27, 2018. Based on a review of MDE files obtained via a PIA request, overfilling of the gasohol compartment of the 8,400-gallon AST resulted in a release of 600 gallons of product from the emergency vent and vapor recovery system. The local fire department and a nearby contractor responded immediately by spreading absorbent material and sand on the spill. The released material spilled into the landscaped areas on the east and west sides of the AST, then proceeded to flow into the stormwater bioretention basin (SBB) located adjacent to the north of the AST. Impacted soils were excavated in the landscaped areas to depths up to 4.5 feet below grade and in the SBB to depths up to 5 feet below grade. Between November 6 and 7, 2017, 273.04 tons of petroleum-impacted soil and 2,683 gallons of petroleum-impacted water (accumulated water from the excavation and SBB after a rain event) were removed for off-site disposal. Nine post-excavation confirmatory soil samples were collected from the landscaped areas and SBB for VOC and TPH analyses. All analytical results were below applicable regulatory standards. The site is connected to the public water supply. and the case was closed in March 2018.</p>	Moderate

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
			<p>The second spill case occurred on June 19, 2018. Based on a review of MDE files, a release of approximately 100 to 200 gallons of gasohol occurred during a delivery to the AST on site. Montgomery County Fire and Rescue responded. The spill was cleaned up with absorbent and more absorbent was to have been applied if necessary. No further information was provided regarding this spill.</p> <p>OCP Case No. 20-0276MO was opened on 11/14/2019 for a motor/lube tank closure. No release was reported; however, the case remains open. Based on a review of MDE files, a 3,000-gallon diesel UST was removed. No perforations were present in the tank or piping, and no soil contamination was reported. Perched water was encountered in the excavation but did not exhibit any visual evidence of a release. Soil samples were collected but no analytical results were available for review. The MDE files noted that a UST Closure Report was required by January 10, 2020; however, no such report was provided in the files.</p> <p>Based on the absence of details on the June 2018 spill at the site and the open OCP case, as well as the proximity of this site to the LOD, there is a potential for impacts to the LOD.</p>	
2	Oak Hill Apartments 11497 Colombia Pike Silver Spring MD 20904	215	<p>FINDS/FRS, OCP, UST – No violations were identified in the available records.</p> <p>The apartment complex previously contained a 20,000-gallon heating oil UST. The UST was installed in 1977 and was excavated and removed from the ground in December 1996.</p> <p>An OCP case was opened in October 1996 and was closed in November 1997. A release and cleanup activities were reported.</p> <p>Based on topography, this site appears to be down-gradient of the LOD, therefore, impacts to the LOD are unlikely.</p>	
3	Dow Jones & Company 11501 Colombia Pike Silver Spring MD 20904	1,270	<p>ICIS, RCRA TSD, SQG – The facility is listed as a currently active SQG. There are closed written informal violations reported for this site.</p> <p>Although this site is listed as being 230 feet away, it is actually located 1,270 feet away from the LOD.</p>	Low
4	Pessoa Construction Company New Hampshire Ave Silver Spring MD 20904	493	FINDS/FRS, ICIS – Air minor, ready-mix concrete.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along Powder Mill Road (MD 212), approximately 200 feet south of Cherry Hill Road, in Hyattsville, Maryland. The surrounding area is primarily residential with some commercial properties. Development of the surrounding area is observed to begin by 1963, and is in its current configuration by 1994. A gas station, located 425 feet to the north of the LOD, currently operates three USTs onsite and previously operated an additional five USTs. Five OCP cases have also been opened at the site and are closed. Based on a review of MDE files obtained via a PIA request, residual soil and groundwater contamination are present at the site. Further, groundwater flow direction is to the south, towards the LOD. Based on this, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

1	11208A Cherry Hill Road Beltsville, MD	330	<p>OCP – In 1997, an OCP case was opened for the splitting of the former heating oil code into residential and commercial. No release or cleanup occurred and the case was closed within three months.</p> <p>UST – Previously, a 30,000-gallon heating oil UST was in use at the site. The tank was installed in 1974 and is permanently out of use and was removed from the ground on 9/15/1997. Currently, the site operates a 15,000-gallon heating oil UST, which was installed on 9/1/1997.</p> <p>FINDS/FRS – air minor permit at apartment building. Although the site is listed as 330 feet from the LOD, it measures more than 565 feet from the LOD. Based on local topography the site appears located up- to crossgradient from the LOD.</p>	Low
2	Shell #819 / High Point Service Center 3412 Powder Mill Road Beltsville, MD	425	<p>OCP – There have been five OCP cases at the site:</p> <p>Case No. 96-0115PG2 was opened on 7/20/1995 for the splitting of the former heating oil code into residential and commercial. No release or cleanup was reported, and the case was closed on 12/7/1995. Based on a review of MDE files obtained via a PIA request, a 550-gallon heating oil UST was removed from the site on July 27, 1995. A perforation was observed on the surface of the tank, so a soil sample was collected beneath the bottom of the tank for BTEX and TPH analyses. The sample was found to be non-detect for BTEX and TPH. The tank was removed for off-site disposal and the excavated soil was returned to the tank excavation. The MDE issued a Notice of Compliance on January 2, 1996 and stated that no corrective action was required.</p> <p>Case No. 99-2057PG2 was opened on 2/17/1999 for a motor/lube oil tank closure. A release and cleanup occurred, and the case was closed on 7/6/1999. Based on a review of MDE files, a 550-gallon used oil UST was removed from the site on February 17, 1999. Small perforations were observed on the surface of the tank, so a soil sample was collected beneath the bottom of the tank for naphthalene and TPH-DRO analyses. The tank was removed for off-site disposal and the excavated soil, which had no staining or petroleum odor, was returned to the tank excavation. Analytical results indicated detections of 0.0015 ppm of naphthalene and 158 ppm of TPH-DRO. The MDE issued a Notice of Compliance on July 8, 1999 and stated that no further corrective action was required.</p> <p>Case No. 04-0477PG2 was opened on 9/4/2003 due to motor/lube oil contamination in groundwater. Cleanup was conducted and the case was closed on 5/4/2005. Based on a</p>	Moderate

2	Shell #819 / High Point Service Center 3412 Powder Mill Road Beltsville, MD (Cont.)	425	<p>review of MDE files, a preliminary site investigation was conducted as part of Shell's Groundwater Assessment Program. Four monitoring wells were installed at the site and sampled quarterly for one year. There were low dissolved levels of BTEX and MTBE, but no significant seasonal variation, and no evidence of a recent release. MDE closed the case since the residual petroleum contamination did not appear to pose any threat to human health or the environment. The case file noted that depth to water is 17 to 22 feet and flow direction is to the south. On December 23, 2009, four monitoring wells at the site were abandoned by a licensed driller and the associated documentation submitted to the MDE.</p> <p>Case No. 12-0067PG was opened on 8/4/2011 for a motor/lube oil tank closure. A release and cleanup occurred, and the case was closed on 10/19/2011. Based on a review of MDE files, during the removal of three 10,000-gallon UST in August 2011, one of the tanks broke in half. Impacted soil was excavated to 6 feet below the USTs and to 9 feet below the dispensers and associated piping for off-site removal. During excavation for the new tank field, an area containing discarded leaking cans of motor oil was discovered, which was also excavated and disposed off-site. Approximately 3,160 tons of soil were removed from the site during the UST closure and site upgrade activities. Fifteen post-excavation soil samples were collected and all analytical results were below regulatory levels for petroleum constituents. Liquid phase hydrocarbons (LPH) were not observed in groundwater at the site. The site and vicinity are served by public water. In a Notice of Compliance dated October 19, 2011, the MDE stated that no further corrective action is required and the case is closed. Residual petroleum contamination was noted to still be present in on-site soil and groundwater but to not present a risk for the current exposure pathways.</p> <p>Case No. 12-0123PG was opened on 8/25/2011 for the installation of a new motor/lube oil tank. No release or cleanup occurred, and the case was closed on 10/31/2012. Based on a review of MDE files, two 12,000-gallon and one 15,000-gallon USTs were installed on 8/23/2011. Tightness testing was conducted on 9/29/2011 but the test procedure was not accepted by the MDE. Testing was repeated on 1/23/2012 and on 10/31/2012, the MDE agreed to close the case. The files indicated no release at the site.</p> <p>UST – Previously, five USTs operated at the site, ranging in size from 550 to 10,000 gallons. The tanks held gasohol, used oil and heating oil. All five tanks are permanently out</p>	Moderate

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along the eastern side of Beltsville Drive, north of Powder Mill Road, in Beltsville, Maryland. The area surrounding the LOD is primarily commercial properties. Prior to commercial development in 1971, the area was entirely forested land. The surrounding the LOD was observed in its current condition by 2005. There are six sites with active and inactive UST with document releases between 165 and 875 feet crossgradient or downgradient of the LOD. An MDE VCP site, Calverton Shopping Center, is located approximately 15 feet north (upgradient) of the LOD. According to available records found on MDE's LRP website, the site is a commercial strip shopping center that houses an active drycleaner. A Phase I Environmental Site Assessment was completed in March 2012, followed by a Phase II Environmental Site Investigation which collected samples next to the dry cleaner. Analysis of the groundwater samples revealed volatile organic compounds above the department's cleanup standards. Per a 2/24/2017 letter, the Department approved proposed groundwater sampling on an annual schedule and restricted to PCE and its breakdown products. Per a letter from February 2019, MDE stated that groundwater sampling may be discontinued. Based on available information, impacts from the former drycleaner appeared to be isolated to the site, located approximately 215 feet upgradient of the LOD. A PIA request was submitted to MDE for further information on the site; however, MDE did not have any files available at the time of this review. Based on the drycleaner's upgradient direction, impacts cannot be ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

1	11701 Beltsville Drive Beltsville MD 20705	165	<p>HMIRS – In March 2004, approximately 1 quart of heating oil was spilled onto the ground as a result of an operator error. The spill was cleaned up with a sorbent pad and properly disposed of.</p> <p>OCP – An OCP case was opened and closed in April 1997 as a result of a vehicle accident. A release and cleanup activities occurred.</p>	Low
2, 5	Calverton Shopping Center Powder Mill Road and Beltsville Dr Beltsville MD 20705	20	<p>SHWS, VCP – The site is a commercial strip shopping center that features a currently active dry cleaner. A Phase I Environmental Site Assessment was completed in March 2012. During a Phase II Subsurface Investigation soil and groundwater samples were collected next to Calverton Dry Cleaners tenant space. The samples were revealed to contain volatile organic compounds in both the groundwater above the department's cleanup standards. Per 2/24/2017 letter, the Department approved proposed groundwater sampling on an annual schedule and restricted to PCE and its breakdown products. Per a letter from February 2019, MDE stated that groundwater sampling may be discontinued. Based on available information, impacts from the former dry-cleaner are believed to be isolated to the its surrounding area, approximately 215 feet upgradient of the LOD. A PIA request was submitted to MDE for further information on the site; however, MDE did not have any files available at the time of this review.</p>	Moderate
3	Perkins Development Corp 4041 Powder Mill Road Beltsville MD 20705	875	<p>UST – This site previously featured a 550-gal heating oil UST. The UST was excavated and removed from the ground in August 1998.</p> <p>OCP – An OCP case was opened in August 1998 in relation to the tank closure. No release or cleanup activities were identified, and the case was closed in later that month. ERIS reported this site to be 218 feet to the east, however it is 874 feet to the south.</p>	Low

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
4,9	Prentiss Properties 11720 Beltsville Dr Beltsville MD 20705	550	<p>UST – The site previously featured a 550-gal diesel UST. The tank was excavated and removed from the ground in October 1999.</p> <p>OCP – Two OCP cases were identified at this property. The first was opened in August 1990 and was closed five years later in June 1995. No further information was provided. The second was opened in October 1999 following the removal of the UST. No release or cleanup activities were reported and the case was closed in May 2002.</p> <p>Based on the local topography, the site appears located crossgradient of the LOD.</p>	Low
6	Calverton Fire Department #41 3939 Powder Mill Road Beltsville MD 20705	390	<p>UST, OCP – The fire department previously had one 2,000-gallon gasoline UST, one 2,000-gallon heating oil UST, and one 2,000-gallon diesel UST.</p> <p>1992 – A 2,000-gallon heating oil UST was excavated and removed from the site. Pitting and rust were observed on the tank; however, no holes were found. PID readings from the excavation were recorded at 96.5 ppm. The MDE inspector instructed the contractor to backfill the excavation and the OCP case was closed in 2000.</p> <p>2000 – A 2,000-gallon diesel UST and 2,000-gallon gasoline UST were excavated and removed from the site. MDE requested that soil samples be collected from the excavations; however, no analytical data or statement that results were received. Thus, it is unknown whether petroleum impacts are present onsite.</p> <p>Based on the local topography, the site appears downgradient of the LOD.</p>	Low
7	CVS Pharmacy 1495 11729 Beltsville Dr Beltsville MD 20705	245	FINDS/FRS, RCRA LQG – CVS Pharmacy is listed as an active RCRA LQG. No notices of violation were identified in the available records. ERIS reported the site to be 389 feet away however it is actually 245 feet away.	Low
8	McDonalds Parking Lot 11735 Beltsville Dr	428	SPILLS – Approximately 20 gallons of hydraulic oil was released onto the ground as a result of a ruptured line on a garbage truck.	Low

Watershed:	WAS	
Street Address/Nearest Cross Streets	Powder Mill Road, southwest of Beltsville Drive	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along Powder Mill Road (MD 212), southwest of Beltsville Drive, in Beltsville Maryland. The area surrounding the LOD is primarily commercial land to the east and forested land to the west and has been observed in its current configuration since 2005. Three sites listed as having OCP cases, former USTs or are closed State Hazardous Waste Site were identified between 460 and 745 feet downgradient or hydraulically separated from the site by a stream and are not considered a concern. A fire station is located approximately 90 feet south (crossgradient) of the LOD. The site had former USTs and documented releases. A PIA request was submitted to MDE for further information; however, the files only documented the removal activities and did contain any analytical sampling data needed to determine whether impacts were present in soil and/or groundwater onsite. However, the USTs are believed to be at least 100 feet crossgradient of the LOD and any groundwater would flow southwesterly towards a stream running northwest to southeast. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	Along Powder Mill Road, at east-bout west of the interchange between east bound Powder Mill Road with south Bound I-95.	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along the south side of Powder Mill Road (MD 212), at the exit ramp for I-95 southbound, in Beltsville Maryland. The area surrounding the LOD is primarily commercial properties. Prior to the development of commercial properties in 1971, the area was entirely forested land. The surrounding the LOD was observed in its current configuration by 2005. A gas station located directly northwest (upgradient), at approximately 170 feet of the LOD, has four active petroleum USTs ranging in size from 8,000-gallons to 12,000-gallons and one former 1,000-gallon used oil UST. In 1998, four hydraulic vehicle lifts were removed from the site, as well as retrofitting the onsite USTs, product piping, and dispenser islands. Approximately 135 tons of soil from the dispenser island trenches was excavated and disposed of offsite. In 2000, a petroleum release from one of the regular gasoline USTs was reported. Four monitoring wells were installed around the tank area. No free product was ever observed, but the March 2001 groundwater sampling results identified dissolved BTEX concentrations as high as 12,205 µg/l in the central portion of the site. The case received closure from MDE in August 2001. Groundwater at the site is believed to flow southeast, towards the LOD. Additionally, an MDE VCP site known as the Calverton Shopping Center is located to the west of the LOD. Dry-cleaning operations have resulted in chlorinated solvent impacts to soil and groundwater. The site is believed to be crossgradient of the LOD; however, impacts cannot be ruled out based on a lack of information on the exact location of the impacts. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

County	Prince George's	
Type of property	Median	
Ranking Rationale Site Summary		
<p>The LOD lies in a median between the I-95 north-bound lanes and the onramp from the Powder Mill Road (MD 212) interchange, north of the Powder Mill Road overpass in Beltsville Maryland. The area surrounding the LOD was previously forested land until the construction of I-95 in the late 1960s. The area surrounding the LOD has been observed in its current configuration since 2005. The Powder Mill Road overpass, located 530 feet to the south, was listed on the RCRA LQG, SPILLS and OCP databases. The RCRA LQG listing was for lead and is likely associated lead abatement during bridge rehabilitation. The SPILLS and OCP cases all involved releases of petroleum as a result of vehicle accidents. In one case, approximately 2,000-gallons of asphalt was released from a tanker truck. SHA requested guidance from MDE on cleanup. The remaining motor vehicle accidents were all minor releases. Based on the distance between the LOD and the overpass, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD lies along the interchange from I-95 south-bound to Powder Mill Road (MD 212) east-bound in Beltsville, Maryland. The area surrounding the LOD was previously forested land until the construction of I-95 in the late 1960s. The area surrounding the LOD has been observed in its current configuration since 2005. Two sites of concern in the surrounding area were identified. The first site, an active gas station located 345 feet west of the LOD, has four active USTs and one former UST. This gas station has a history of environmental issues, including impacted soil and groundwater; however, based on reports provided by MDE, this site is located hydraulically crossgradient of the LOD. The second site of concern, a hotel located 519 feet to the south (downgradient) has one active UST and one former UST. During removal of the former UST, no subsurface impacts were noted. Based on the distance and hydraulic direction of these sites, impacts to the LOD are unlikely.</p>

2	Exxon Gas Station 4040 Powder Mill Rd Beltsville MD 20705	345	<p>FIND/FRS, ICIS – Minor air permit</p> <p>RCRA-CESQG/VSQG – Permitted RCRA-VSQG, no violations.</p> <p>SPILLS - Three spills of less than 2 gallons have been reported at the facility.</p> <p>UST, OCP – The gas station has four active petroleum fuel UST ranging in size from 8,000-gallons to 12,000-gallon and one former 1,000-gallon used oil UST associated with the facility. Three closed OCP cases have been opened at the site.</p> <p>1991 – A 1,000-gallon waste oil UST was excavated and removed from the site. No impacted soils or odors were observed in the excavation. A PID reading from the soil from the excavation was recorded at 1.0 ppm. A soil sample was collected two feet below the grade of the UST, which was non-detect from BTEX, TPH, and naphthalene.</p> <p>1998 – Four hydraulic vehicle lifts were removed from the site, as well as retrofitting the onsite USTs, product piping, and dispenser islands. Approximately 135 tons of soil from the dispenser island trenches was excavated and disposed of offsite.</p> <p>2000 – A reported petroleum release from one of the regular gasoline USTs was reported, the product lines and tank were tested for tightness and passed. Four monitoring wells were installed around the tank area. No free product was observed in any of the wells. The maximum benzene concentration was detected at 433 ug/l and BTEX at 12,205 ug/l in MW-4, located in the central portion of the site. Based on groundwater depth gauging, groundwater is flowing northwest to southeast, crossgradient of the LOD.</p>	Low
3	Sheraton Hotel 4095 Powder Mill Rd Beltsville MD 20705	519	<p>FIND/FRS – Air permit, no violations.</p> <p>ALT FUELS – Electric vehicle charging station registered to the site.</p> <p>OCP, UST – The hotel facility has one currently in-use 600-gallon diesel UST installed in 1999 and one 550-gallon diesel UST that was removed in 1999. According to available information no impacted soil was encountered during the removal of the UST. Soils from 2 feet below the grade of the UST were screen with a PID, which recorded a reading of 7.6 ppm. Two confirmation soil samples were collected from each end of the excavation and analyzed for TPH-DRO, which were both non-detect and the case was closed.</p>	Low

Street Address/Nearest Cross Streets	Along Powder Mill Road, southwest of Beltsville Drive	
City	Beltsville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD lies along Powder Mill Road (MD 212), southwest of Beltsville Drive, in Beltsville, Maryland. The area surrounding the LOD is primarily commercial to the east and forested land to the west, and has been observed in its current configuration since 2005. Three site listed as having OCP cases, former USTs or are closed State Hazardous Waste Site were identified between 465 and 825 feet downgradient or hydraulically separated from the site by a steam and are not considered a concern. A fire station is located approximately 90 feet south (crossgradient) of the LOD. The site had former USTs and documented releases. A PIA request was submitted to MDE for further information; however, the files only documented the removal activities and did contain any analytical sampling data needed to determine whether impacts were present in soil and/or groundwater onsite. However, the USTs are believed to be at least 175 feet crossgradient of the LOD and any groundwater would flow southwest, towards a stream running northwest to southeast. Thus, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,3	Perkins Development Corp 4041 Powder Mill Road	825	<p>UST, OCP – This site previously featured a 550-gal Heating Oil UST. The UST was excavated and removed from the ground in August 1998.</p> <p>OCP – An OCP case was opened in December 1991 in relation to soil contamination. A release and cleanup activities occurred. The case was closed in September 1998.</p> <p>1998 - An OCP case was opened in August 1998 in relation to the tank closure. No release or cleanup activities were identified, and the case was closed in later that month. ERIS reported this site to be 222 feet to the east, however based on further review the site is at least 725 feet to the southeast (crossgradient) of the LOD.</p>	Low
2	Calverton Fire Dept #41 3939 Powder Mill Rd	175	<p>UST, OCP – The fire department previously had one 2,000-gallon gasoline UST, one 2,000-gallon heating oil UST, and one 2,000-gallon diesel UST.</p> <p>1992 – A 2,000-gallon heating oil UST was excavated and removed from the site. Pitting and rust were observed on the tank; however, no holes were found. PID readings from the excavation were recorded at 96.5 ppm. The MDE inspector instructed the contractor to backfill the excavation and the case was closed in 2000.</p> <p>2000 – A 2,000-gallon diesel UST and 2,000-gallon gasoline UST were excavated and removed from the site. MDE requested that soil samples be collected from the excavations; however, no analytical data or statement that results were received. Thus, it is unknown whether petroleum impacts are present onsite.</p> <p>The site was listed being 85 feet from the LOD; however, after further review the former USTs are at least 175 feet south (crossgradient) of the LOD. It is believed that any groundwater would flow to the southeast.</p>	Low
4	Calverton Shopping Center Powder Mill Road and Beltsville Dr	685	<p>SHWS, VCP – The site is a commercial strip shopping center that previously featured a dry cleaner. A Phase I Environmental Site Assessment was completed in March 2021. During a Phase II Subsurface Investigation soil and groundwater samples were collected next to Calverton Dry Cleaners tenant space. The samples were revealed to contain volatile organic compounds in both the groundwater above the department's cleanup standards. ERIS reported the site to be 277 feet away, however it is actually 687 feet away.</p>	Low

Street Address/Nearest Cross Streets	North side of Columbia Pike, east of Stewart Lane	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is primarily located on the north side of Columbia Pike (US Route 29), between Columbia Pike and Milestone Drive, and east of Stewart Avenue, in Silver Springs, Maryland. Portions of the LOD extend across Columbia Pike and Milestone Drive. The surrounding area can be characterized as mixed-use residential/commercial. Multi-family residential structures are observed to the south, along with a commercial shopping center further to the southwest. A police station along with additional multi-family residential structures and single family residential properties are located to the north. Single-family residential properties are also located to the west, beyond the interchange. The police station, located 360 feet to the west, was listed as having two active petroleum ASTs and a former UST. No impacted material was observed during the closure for the former UST. A surficial spill occurred in 2019 during the filling of the existing AST; however, the released material was cleaned up. The remaining records were associated with facilities located 570 feet and 760 feet from the LOD. Based on the distances of these facilities, impacts to the LOD are unlikely.</p>

Type of property	Median	
Ranking Rationale Site Summary		
<p>The LOD lies along the I-95 northbound exit ramp for Powder Mill Road (MD 212) westbound, north of the Powder Mill Road overpass, in Beltsville, Maryland. The area surrounding the LOD was previously forested land until the construction of I-95 in the late 1960s. The area surrounding the LOD has been observed in its current configuration since 2005. The Powder Mill Road overpass, located 530 feet to the south, was listed on the RCRA LQG, SPILLS and OCP databases. The RCRA LQG listing was for lead and is likely associated lead abatement during bridge rehabilitation. The SPILLS and OCP cases all involved releases of petroleum as a result of vehicle accidents. In one case, approximately 2,000-gallons of asphalt was released from a tanker truck. SHA requested guidance from MDE on cleanup. The remaining motor vehicle accidents were all minor releases. Based on the distance between the LOD and the overpass, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	East side Woodfield Road (MD 124) between Snouffer School Road and Lindbergh Drive	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Woodfield Road (MD 124) between Snouffer School Road and Lindbergh Drive, in Gaithersburg, Maryland. The surrounding area is a mix of commercial and residential developments. Commercial and residential development is observed to begin prior to 1993. The surrounding area is in its current configuration by 2005. A shopping center adjacent to the LOD had a dry-cleaning facility approximately 150 feet southeast (potentially crossgradient) of the LOD, that historically utilized chlorinated solvents in their dry-cleaning operations. Based on a review of investigation summary reports and analytical soil and groundwater data provided by MDE through a PIA request, soil and groundwater in the immediate vicinity of the LOD is not believed to be impacted by the former dry-cleaner. The shopping center also had two former 550-gallon heating oil USTs that were excavated and removed from the site in 2005 and 2007. No impacts were identified with the UST removed in 2005; however, analytical data showed detected concentrations of TPH-DRO at 85 mg/kg, two feet below the grade of the UST (approximately 7 feet bgs) that was removed in 2007. Both USTs received closure from MDE. Based on this information, residual concentrations of petroleum constituents could be encountered within the limits of the LOD based on the proximity of the former USTs. Thus, further investigation may be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Air Park 124 LLC 18524 Woodfield Road Gaithersburg, Md	40	<p>OCP, UST – The site had two 550-gallon heating oil USTs excavated and removed from the site in 2005 and 2007. Based on available information, the two former USTs were located in the southeast corner of property, adjacent to Woodfield Road and directly adjacent to the LOD.</p> <p>In 2005, a 550-gallon heating oil UST was excavated and removed from the site. No perforations were observed on the UST and no impacted material was identified in the excavation. The MDE inspector onsite granted permission for the excavation to be backfilled and the case was closed in September 2005.</p> <p>In 2007, the second 550-gallon heating UST was excavated and removed from the site in March 2007. No elevated PID readings were recorded from screening of soil from the excavation, and the UST was free of perforations. Two soil samples were collected from two feet below the grade of the UST (approximately 7 feet bgs) and analyzed for TPH-DRO and VOCs. TPH-DRO was detected at 85 mg/kg in one sample and non-detect in the second sample. The excavation was backfilled and the case received closure four months later in July 2007. The site is believed to be crossgradient of the LOD.</p> <p>Based on the analytical results, residual concentrations of petroleum constituents could be encountered within the limits of the LOD based on the proximity of the former USTs. Thus, further investigation may be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>	Moderate

2	Crystal Cleaners 18526 Woodfield Road Gaithersburg, Md	40	DRYCLEANERS, FED DRYCLEANERS, LUC, SHWS, DSHW – The site was formerly a dry cleaning plant approximately 40 feet northwest (potentially upgradient/crossgradient) of the LOD. In 2005, the site entered into the VCP program due to the possibility that the site has been impacted by drycleaning activities that have been conducted on the site since 1987. The site used PERC as its main solvent for dry cleaning. Four soil samples were collected from high priority areas, such as the solvent storage area, drains, washing machines, and entrances to the facility that solvents were brought in and out. The soil samples were analyzed for VOCs, all of which were non-detect and the site received a no further action determination from MDE in October 2005. Additionally, a Phase II site investigation was conducted in 2000 at a self-storage facility approximately 230 feet southwest of the LOD, due to its proximity to the drycleaners and several other OCP cases in the vicinity. Based on the analytical results, only low detections of toluene (5 ug/l) were detected in the groundwater samples. Based on the analytical data and information summarized above, it is not believed that the site has impacted soil and groundwater in the immediate vicinity of the dry cleaning facility or LOD. Currently, there are no land-use or groundwater restrictions imposed on the site.	Low
3	Self-Storage Zone 8001 Snouffer School Road Gaithersburg, Md	55	LUC, SHWS - Although the site is listed as 455 feet from the LOD, after further reviews, the site is approximately 55 feet from the LOD. A Phase II site investigation was conducted in 2000 at a self-storage facility southwest of the LOD, due to its proximity to the drycleaners and several other OCP cases in the vicinity. Based on the analytical results, only low detections of toluene (5 ug/l) were detected in the groundwater samples. Based on the analytical data and information summarized above, it is believed that the LOD and site have not been impacted by the former dry cleaning facility or OCP cases. The site received no further action from MDE in 2005 and no land-use or groundwater restrictions are currently imposed on the site.	Low
4	Qualex Inc 8010 Snouffer School Road Gaithersburg, Md	525	FINDS/FRS, RCRA CESQG – No violations noted during this review.	Low

5	EXXON 7983 Muncaster Mill Road Gaithersburg, Md	445	<p>UST, OCP – Four USTs are currently in use at this location. All tanks are 10,000 gallons, three of which contain gasohol and one which contains diesel. There are four OCP cases associated with this facility. One case was for a compliance inspection while the other three cases all involve releases, two of which include cleanup actions.</p> <p>SPILLS – In 2015, an unknown amount of gasoline was spilled due to a leak in a secondary pipe. The product was released into a secondary containment. The line was shut down and serviced.</p> <p>Although the site is listed at 600 feet from the LOD, it is measured to be approximately 445 feet from the LOD. Based on local topography, the site is believed to be located crossgradient from the LOD.</p>	Low
6	COLORNET PRINTING & GRAPHICS INC 18630 WOODFIELD RD	600	FINDS/FRS, RCRA-CESQG – No violations were noted.	Low
7	Laytonia Auto Service 7979 Muncaster Mill Road Gaithersburg, Md	525	<p>RCRA SQG – There are no known violations associated with this facility.</p> <p>UST, OCP – Seven USTs previously operated at this site. All USTs are permanently out of use, five of which have been removed from the ground. Two OCP cases have been opened at this site. Both cases were opened during a tank closure. One case involved a release, but no cleanup actions are noted. Both cases have been closed.</p> <p>Although the site is listed at 645 feet from the LOD, it measures approximately 525 feet from the LOD. Based on local topography, the site is believed to be crossgradient from the LOD.</p>	Low

Street Address/Nearest Cross Streets	North side of Spencerville Road (MD 198), east of Good Hope Road	
City	Spencerville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Spencerville Road (MD 198), east of Good Hope Road, in Spencerville, MD. An unpaved road leads north from Spencerville Road on the east side of LOD, the road is blocked to vehicles by large concrete blocks. The area immediately surrounding the LOD is forested, with primarily residential development further out, mostly constructed by 1960 other than an area to the northwest constructed in the 2000's. A Seventh-Day Adventist church is located approximately 415 ft to the southwest of the LOD and is identified in the environmental database search as the Spencerville Junior Academy. One former heating oil UST and one existing 8,000-gallon heating oil UST are registered to property; however, no OCP cases with the site were identified. Impacts to the LOD are unlikely, since the site is believed to be downgradient.</p>

Project Area Site Descriptions

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1959	LOD is observed to be forested land Spencerville Road is visible, however, its alignment is different than current conditions and is north instead of south of the LOD. The area to the north of Spencerville Road is mostly agricultural fields with a few homes. Additional residential development is observed to the east of the LOD. The area to the south is observed to be primarily forested and agricultural land with some intermixed areas of residential properties.	Aerial
1964-1970	No changes to the LOD are observed. Surrounding area is generally similar, with some fields no longer maintained under agricultural use. Appears to have been some redevelopment to the southwest, current location of Seventh Day Adventist Church/former school.	Aerial
1981-1988	Spencerville Rd appears to have been realigned into its existing condition. A driveway is visible on the east side of the LOD, leading to a house to the north.	Aerial
2005	LOD is unchanged. House north of LOD no longer visible. New residential development visible to the northwest.	Aerial
2006-2009	LOD and surrounding area are generally unchanged.	Aerial
2011	LOD appears to have been cleared. Surrounding area is generally unchanged.	Aerial
2013-2018	LOD and surrounding area are generally unchanged and similar to existing conditions.	Aerial

County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located adjacent to the southeast corner of the intersection of Shady Grove Road and Metro Access Road, in Derwood, Maryland. Based on a review of aerial photographs, the LOD was formerly occupied by an off-ramp of the Metro Access Road constructed in the 1980s, which has since been realigned based on aerial photographs between 2009 and 2011 and is now grass and vegetation-covered land. The surrounding area is residential with some commercial and industrial developments. The residential development is observed to begin between 1959 and 1971. The commercial and industrial developments are observed to begin in 1981 based on aerial photographs. No records of concern in the vicinity of the LOD were identified during the environmental review.

Street Address/Nearest Cross Streets	East side of Olney Laytonsville Road, southeast Brookfield Road	
City	Olney	
County	Montgomery	
Type of property	ROW/private	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Olney Laytonsville Road, southeast Brookfield Road, in Olney, Maryland. The surrounding area is semi-rural with some commercial and residential developments. Development of the surrounding area is observed to mostly complete by 1959, with small expansion of a commercial property northwest of the LOD finishing in 2011. The commercial property northwest of the LOD appears to be a garden nursery and has several database listings. The site previously operated four USTs and has had several OCP cases. The site was listed as being 180 feet northwest of the LOD; however, at further review the site and former USTs were at least 775 feet northwest of the LOD. Thus, impacts are unlikely.</p>

1,2	Samir Andrawos Residence/ 5317 Brookeville Road Olney, MD	775	OCP, UST – Previously four UST operated at this site up until 1994. The USTs ranged in size from 1,000 to 3,000-gallons in size and held either diesel or gasoline. PID readings from the excavation ranged from 0.0 ppm to 46 ppm from underneath the 1,000-gallon and 3,000-gallon diesel USTs, 50 ppm to 200 ppm from underneath the 1,000-gallon diesel UST, and 500 ppm to 3,500 ppm from underneath the 1,000-gallon gasoline UST. MDE requested that a monitoring well be installed and sampled for TPH and BTEX; however, no analytical data was provided. The final close out document from MDE stated that groundwater was not impacted though. The case received closure in November 1994. Based on a review of historical imagery, the former USTs were at least 775 feet northwest of the LOD. Thus, impacts are unlikely.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1959	Commercial development west of the LOD, some residential properties northeast of the LOD	Aerial
1971	No change substantial changes are observed to the surrounding area.	Aerial
2005	Additional commercial property north of the LOD, surrounding area observed in its current configuration	Aerial

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	West side of Rockville Pike (MD 355), north of Edison Lane	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Rockville Pike (MD 355), north of Edison Lane, in Rockville, Maryland. The surrounding area is commercial, consisting mostly of office buildings and retail constructed in the 1970's and 1980's. The surrounding area was observed to be developed in its current configuration in the late 1980s. Three sites between 300 feet and 655 feet of the LOD, including a former mall and existing office buildings were identified as having former USTs with documented releases; however, after a review of available information provided by MDE through a PIA request any impacts are believed to be isolated to those properties or downgradient/crossgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	11200 Rockville Pike LLC, CRI Building, 11200 Rockville Pike	300	Alt Fuels – This site is an electric fuel station. OCP, UST – In 1998, a 500-gallon diesel UST was excavated and removed from the site based the findings of a Phase II ESA conducted at the site that identified detected concentrations of petroleum constituents in the surrounding soil; however, based on the investigation findings it was concluded that the impacts were isolated to the immediate area around the former UST. Based on observations from the removal of the UST, no odors or staining were observed in the excavation. The case received closure in 1999. The UST is believed to have been located on the western side (rear) of the facility, approximately 300 feet (crossgradient) of the LOD.	Low
2	Bertolinis Restaurant, Whitie Flint LP, White Fling 11301 Rockville Pike	665	FINDS/FRS, OCP, UST. This site has a single historic UST, a 275-gallon diesel tank that was installed in 1978 and removed in 1994. The 1994-1995 OCP case does not indicate a release or cleanup occurred. The site operates under a minor air permit. The facility appears to have been demolished around 2016/2017 and was at least 665 feet east (crossgradient) of the LOD.	Low
3	Bloomingtondales 11305 Rockville Pike	155	FINDS/FRS, RCRA CESQG. This side is a RCRA conditionally exempt small quantity generator of ignitable waste with no records of violation.	Low
4	Dynamac Corporation 11140 Rockville Pike	170	FINDS/FRS, FTTS Admin, FTTS Insp. This site has 1991-1993 Federal Insecticide, Fungicide, and Rodenticide Act and Toxic Substances Control Act Inspection and Administration violation records.	Low
5	Lincrest Furniture Co Inc, One Century Plaza 11300 Rockville Pike	300	OCP, UST. This site has one historic UST, a 300-gallon diesel tank installed in 1973 and removed in 1998. The 1998 OCP tank closure case indicated a release and cleanup occurred. It is believed that the former UST was at least 300 feet northwest (crossgradient) of the LOD. HMIRS. Approximately 1-gallon heating oil was released during a delivery in 1998, the material was cleaned up and disposed of. FINDS/FRS, RCRA NON GEN. The site is a RCRA non generator with no records of violation.	Low
6	Bowen & Kron @ White Flint Mall 11301 Rockville Pike	255	FINDS/FRS. This site is on the state master list due to performing wrecking and demolition work.	Low

SITE ID: **WAS-3601-LOW**

LOD ID: WAS-3602	Site Rank: Low	Figure Location: 
Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	North side of Bradley Boulevard (MD 191), east of Seven Locks Road	
City	Bethesda	
County	Montgomery	
Type of property	ROW/Private	
Ranking Rationale Site Summary		
The LOD is located along north side of Bradley Boulevard (MD 191), east of Seven Locks Road, in Bethesda, Maryland. The LOD is located south of the Bethesda Country Club and St George Orthodox Church, east of the intersection of the Bradley Boulevard and Seven Locks Road. The area is considered suburban. The LOD lies along the southern boundary of Bethesda Country Club that is listed as a delisted SHWS due to the potential that irritant gases were tested on a small area of the property around WWI. Regulators determined that no testing was required and no further action was warranted. Several USTs have been removed from the site, approximately 975 feet to the north. Thus, impacts to the LOD are unlikely.

County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the west side of Georgia Avenue (MD 79), south of Thistlebridge Drive, in Rockville, Maryland. The surrounding area is a mix of residential and commercial properties. Residential development is observed to begin prior to 1959, while commercial development began in the 1960s, which continued through 2005, when the surrounding area was observed to be developed in its current configuration. Two sites of concern were identified in the environmental database report. The first site, a hardware/former service station approximately 190 feet south (downgradient) of the LOD, previously had 11 petroleum USTs ranging in size from 110-gallons to 550-gallon removed. In November 1989, six soil samples were collected in the vicinity of two 550-gallon gasoline USTs near the south end of the site in order to evaluate potential petroleum contamination. Noticeable petroleum odors were noted in the field during the investigation. Soil samples were analyzed for TPH and BTEX which confirmed the presence of soil contamination near the tanks as well as along the south edge of the property, which may be due to an off-site source, potentially a gas station further to the south. In November 1995, two 290-gallon motor oil tanks, two 110-gallon motor oil USTs, two 550-gallon gasoline USTs and one 280-gallon kerosene UST were excavated and removed were excavated and removed from the site. PID readings from the excavation ranged from 10 and 500 ppm. No free product was encountered and the on-site MDE inspector approved backfilling of the excavation. No further work was required. Based on the information summarized above and the absence of any post-excitation analytical data to indicate otherwise, it is possible that residual concentrations of petroleum constituents could be encountered within the limits of the LOD. The second site of significant concern, an automotive sales business and tire repair shop located approximately 70 feet west (downgradient) of LOD. In 1991, a 275-gallon kerosene UST was excavated and removed from the site. Upon removal, one perforation was discovered at the top of the tank. A petroleum odor was observed; therefore, soil was excavated from several feet below the depth of the tank and a PID</p>		

SITE ID: **WAS-3609-HIGH**

Project Area Site Descriptions

<p>reading of below 50 ppm was recorded. The onsite MDE inspector granted permission to backfill the excavation site. Based on the information summarized above and the absence of any post-excavation analytical data to indicate otherwise, it is possible that residual concentrations of petroleum constituents could be encountered within the limits of the LOD. Thus, further investigation may be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

1	Norbeck Sales 15520 Georgia Avenue, Rockville, MD 28053	70	<p>Based on aerial imagery, it appears this property is used as an automotive sales business and tire repair shop; however, no additional ERIS records were identified.</p> <p>An OCP case (91-1698MO) was opened on 2/28/1991 and closed on 4/20/1992. Based on the information provided by MDA through a PIA request, a 275-gallon kerosene UST was removed on 2/28/91. The tank was approximately 40 years old and had not been used for 20 years. Upon removal, one perforation was discovered at the top of the tank. The soil was scanned with an HNu meter and levels were found to be acceptable to the on-site State inspector. However, a very light odor was detected in the soil, therefore, soil was excavated from several feet below the depth of the tank and HNu readings at that depth were under 50 ppm. The State inspector granted permission to backfill the excavation site. Based on the information summarized above and the absence of any post-excavation analytical data to indicate otherwise, it is possible that residual concentrations of petroleum constituents could be encountered within the limits of the LOD.</p> <p>This property abuts the LOD to the west, however, the operations taking place are expected to be hydraulically downgradient from the LOD.</p>	High

2	L.W. White & Son Inc. 15508 Georgia Avenue, MD, 28053	190	<p>This hardware and former gasoline station is registered with the following eleven (11) permanently out of use USTs closed on 11/20/1995:</p> <ul style="list-style-type: none"> - Six (6) 550-gallon gasoline USTs installed on 1/1/1966; - Two (2) 110-gallon used oil USTs installed on 1/1/1964; - A 280-gallon kerosene UST installed on 1/1/1966; and - Two (2) 290-gallon used oil USTs, installation dates are not provided. <p>An OCP (90-0633MO) case was opened on 12/5/1989 and closed on 12/19/1995. Based on information provided by MDE via a PIA request, the case is associated with the UST closures.</p> <p>In November 1989, six soil samples were collected in the vicinity of two 550-gallon gasoline USTs near the south end of the site in order to evaluate potential petroleum contamination. The investigation was conducted in response to a warning notice issued by MDE in October 1989 since the tanks were not in use. Noticeable petroleum odors were noted in the field during the investigation. The soil samples were analyzed for TPH and BTEX. Analytical results confirmed the presence of soil contamination near the tanks as well as along the south edge of the property, which may be due to an off-site source. It was the owner's position that the contamination was primarily due to an Exxon station formerly located in the current location of Route 28. There were no additional MDE records indicating how the soil contamination was addressed.</p> <p>MDE subsequently advised the property owner that out of use tanks must be removed or abandoned in place and active tanks must be tested. MDE files indicate that in November 1995, two 290-gallon motor oil tanks were excavated, cut up on site and removed. Soil around the excavation was scanned with a Microtip meter and found to measure between 10 and 90 ppm. Soils beneath the tanks ranged from 28 to 30 ppm. In addition, two 110-gallon motor oil USTs, two 550-gallon gasoline USTs and one 280-gallon kerosene UST were excavated and removed. Microtip readings reached up to 500 ppm near fill pipes and 300 ppm under the tanks, and dropped to below 100 ppm further away. No free product was encountered. The on-site State inspector approved backfilling of the excavation and no further work was required. Based on the information summarized above and the absence of any post-excavation analytical data to indicate otherwise, it is possible that</p>	Moderate

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Georgia Avenue (MD 97), south of Norbeck Road (MD 28), in Rockville, Maryland. The LOD has remained vacant land since the 1950s based on available aerial imagery. The surrounding area is a mix of residential and commercial properties. Residential development is observed to begin prior to 1959. Commercial developments to the north are observed to begin in the 1960s. Development continued through 2013, when the surrounding area was observed to be developed in its current configuration. A gas station is located 145 feet north (upgradient) of the LOD with four USTs currently on the site and eleven former USTs. The facility currently has an open OCP case related to elevated levels of TPH-DRO/GRO and VOCs present in soil and groundwater both on and offsite of the facility. In 2014, three 10,000-gallon petroleum USTs were excavated and removed from the site, along with approximately 1,000 tons of impacted soil. Confirmation samples and groundwater samples collected from the excavation, soil borings, and temporary groundwater monitoring wells revealed elevated levels of several petroleum constituents above MDE's non-residential cleanup levels. Subsequently, eight permanent monitoring wells were installed across the site and continue to be sampled quarterly to present day. According to the analytical data from January 2019 quarterly sampling report for the monitoring well (MW1) closest to the LOD, 145 feet to the northwest (upgradient), detected concentrations of benzene (4,300 ug/l), ethylbenzene (2,310 ug/l), MTBE (661 ug/l), naphthalene (570 ug/l), toluene (15,100 ug/l), Xylenes (5,410 ug/l), THP-GRO (24.0 mg/l) and TPH-DRO (5.35 mg/l) all greatly exceed their corresponding MDE regulatory action levels. The groundwater plume is not drawn beyond the boundaries of the site; however, based on the current plume boundaries and that the LOD is hydraulically downgradient of the site, there is a high probability that groundwater and possibly soils within the LOD are impacted. Further investigations are believed to be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

Street Address/Nearest Cross Streets	Intersection of Connecticut Avenue (MD 185) and University Boulevard (MD 193)	
City	Kensington	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located north of the intersection of Connecticut Avenue (MD 185) and University Boulevard (MD 193) in Kensington, Maryland. The LOD is surrounded by commercial development. Based on historical aerial and topographic maps, the LOD has never been developed. Development of the surrounding area began prior to 1959, with University Boulevard present and residential development in the surrounding areas. The LOD and surrounding area have been similar to their current configuration since 1988. Seventeen sites were identified within the vicinity of the LOD in the environmental database report. Six the of the sites were had listings related to active/ inactive USTs, OCP cases, and/or document spills, but were determined not be an environmental concern based on their proximity to the LOD or are believed to be either hydraulically crossgradient/ downgradient. The only site of concern identified in the database report is an active gas station, adjacent to the north of the with two gasoline USTs. On 2/10/15, a line test failure resulted in a release. According to records provided by MDE, the leak detector on the Premium STP was replaced on 11/16/15 after the old one failed a test. Testing of the system was successfully completed the same day. The site is registered with two active 12,000-gallon gasohol USTs installed on 7/1/1992; five former 4,000-gallon USTS installed in 1953 and removed on 8/3/1987; one 1,000-gallon used UST installed in 1953 and removed on 8/3/1987; and one 1,000-gallon UST of unknown contents installed in 1953 and removed on 8/3/1987. No information was available regarding the removal of the USTs in 1987. In June 2018, the two 12,000-gallon USTs were tightness tested and passed. Based on the proximity of the service station to the LOD and the lack of information regarding the UST closures in 1987, further investigation may be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

1, 2	Econoway Service Station 3745 University Blvd W Kensington, MD 20895	55	FINDS/FRS, UST, SPILLS, ICIS – Adjacent to LOD. This site is a gasoline service station with two currently-in-use gasoline USTs. There was a line test failure that resulted in a spill on 2/10/15. According to records provided by MDE through a PIA request, the leak detector on the Premium STP was replaced on 11/16/15 after the old one failed a test. Testing of the system was successfully completed the same day. The site is registered with two active 12,000-gallon gasohol USTs installed on 7/1/1992. Former USTs include five 4,000-gallon USTs installed in 1953 and removed on 8/3/1987; one 1,000-gallon used UST installed in 1953 and removed on 8/3/1987; and one 1,000-gallon UST of unknown contents installed in 1953 and removed on 8/3/1987. No information was available regarding the removal of the USTs in 1987. In June 2018, the two 12,000-gallon USTs were tightness tested and passed.	Moderate
3	Kaiser Permanente 10810 Connecticut Ave Kensington, MD 20895	160	RCRA VSQG, OCP, UST, FINDS/FRS, HMIRS – Located crossgradient approximately 160 feet from the LOD, this listing is a VSQG for ignitable waste, corrosive waste, mercury, and phenol, with no violations found. A ground seep investigation and cleanup occurred from 3/23/1998 to 5/5/1999. There are two currently-in-use diesel USTs. On 7/2/1992, approximately 7 gallons of diesel spilled during tank filling. Based on local topography, this site is hydraulically downgradient of the LOD.	Low
4, 5	Kensington Cleaners 3731 University Blvd W Kensington, MD 20895	~350	FINDS/FRS, Dry Cleaners – Listed in the FINDS registry. Listed as an inactive dry cleaners. No violations found. Note: while the database mapped this facility at 220 feet from the LOD, actual distance is approximately 350 feet.	Low
6	Debonair Cleaners 3717 University Blvd W Kensington, MD 20895	340	RCRA VSQG, FINDS/FRS – Listed as a dry cleaner with no enforcement records. Note: while the database mapped this facility at 340 feet from the LOD, actual distance is approximately 550 feet.	Low
7	CVS Pharmacy 3715 University Blvd W Kensington, MD 20895	470	RCRA LQG, FINDS/FRS – Registered as a RCRA-LQG, no violations were noted during this review.	Low

8	Amoco Station 3700 University Blvd W Kensington, MD 20895	480	<p>RCRA SQG, OCP – A gasoline service station located cross-gradient from the LOD. The listing has 3 closed cases and two gasoline USTs currently-in-use. Based on a review of MDE files provided through a PIA request, a 550-gallon used oil UST and an 8,000-gallon gasoline UST were removed from the site in December 1991 and August 1993, respectively. Monitoring wells were installed in 1991 and free phase product was observed in MW-3 in 1992. Periodic groundwater and vapor recovery was conducted via enhanced fluid recovery. The associated case (92-1646 MO1) was closed by MDE on May 21, 1998.</p> <p>Three 10,000-gallon gasoline and one 1,000-gallon heating oil USTs were removed in December 2002. Although no staining was observed in the vicinity of the tanks, there were strong hydrocarbon odors detected, therefore, soil excavation was conducted to a depth of 17 feet. Similarly, contaminated soil was excavated to a depth of 6.5 feet at the northwest dispenser island and to 10 feet at the middle dispenser island. Petroleum-impacted soil had to be left in place at this location due to the proximity of the canopy foundation to the south and lack of clearance for overhead equipment. Post-excavation soil samples collected from beneath the USTs and product lines revealed the presence of BTEX, MTBE, naphthalene, TPH-DRO and TPH-GRO at the site, with maximum concentration detected beneath the middle product dispenser at approximately 10 feet deep. Approximately 196 tons of soil were removed from the site. Monitoring wells were installed and a small amount of free product was detected in the wells. Bailing and absorbent socks were initially used to remove the free product. Remediation consisting of surfactant injection and extraction was conducted and MDE subsequently granted closure of OCP case 2003-0596MO in December 2002 pertaining to the three 10,000-gallon gasoline USTs. MDE noted that groundwater sampling conducted at the site in March and April of 2003 exhibited concentrations of contaminants above cleanup standards; however, the concentrations are stable and the site and vicinity are served by public water. MDE also stated that residual petroleum contamination was still present at the site and could be exposed if future excavation in the former tank field occurs. Future construction should also evaluate the need to address potential vapor intrusion into indoor air. A hydrostatic test failure of dispenser sumps for dispensers 5/6, 7/8 and 9/10 was reported to MDE on 11/13/2018. However, there was no release of product. Based on local topography, this site is believed to be hydraulically crossgradient of the LOD.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Democracy Boulevard, east of Taveshire Way, in Bethesda, Maryland. The surrounding area is a mix of residential and commercial developments. Residential and commercial development began prior to 1959 and continued through 1998, when the surrounding area was observed to be developed in its current configuration. The LOD is to the south across Democracy Boulevard from an indoor shopping center where there have been two closed OCP cases and several former USTs. All of these sites are located at least 500 feet from the LOD and are of low concern. There are also two sites within the shopping center that are RCRA CESQG and RCRA SQG, both with no records of violations. In addition to the shopping center, a gas station is located 515 feet from the LOD with several spills and closed OCP cases. Due to the distance of the gas station and its assumed downgradient location relative to the LOD, impacts to the LOD are unlikely from this sites, as well as the four sites listed in the environmental database report.</p>

Street Address/Nearest Cross Streets	North side of Norbeck Road (MD 28), west of Muncaster Mill Road (MD 115)	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is a located along the north side of Norbeck Road (MD 28), west of Muncaster Mill Road (MD 115), in Rockville, Maryland. The LOD has remained vacant land since the 1950s; however, it is possible that a driveway associated with a rural residential dwelling formerly transected a portion of the LOD based on an aerial photograph from 1971. The LOD appeared to be in its current configuration by 1988. The surrounding area is primarily residential with St. Patrick's Catholic Church to the north. The surrounding residential development is observed to begin in the 1950s. Development of the church to the north is observed to begin in 1971. The area is observed to be in its current configuration by 2013. Three sites within a 0.125-mile radius of the LOD were identified with closed OCP cases and removed heating oil USTs; however, all of these are located greater than 400 feet from the LOD and are believed to be hydraulically downgradient/ crossgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	West side of Georgia Avenue (MD 97), north of Norbeck Road (MD 28)	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on vacant/maintained ROW, west of Georgia Avenue (MD 97), north of Norbeck Road (MD 28), in Rockville, Maryland. The surrounding area is a mix of residential and commercial properties. Residential development is observed to begin prior to 1959. Commercial development is observed to begin in the 1960s. Development in the surrounding area continued through 2005, when the surrounding area is observed to be developed in its current configuration. The first site, a hardware/former service station approximately 75 feet south (downgradient) of the LOD, previously had 11 petroleum USTs ranging in size from 110-gallons to 550-gallon removed. In November 1989, six soil samples were collected in the vicinity of two 550-gallon gasoline USTs near the south end of the site in order to evaluate potential petroleum contamination. Noticeable petroleum odors were noted in the field during the investigation. Soil samples were analyzed for TPH and BTEX which confirmed the presence of soil contamination near the tanks as well as along the south edge of the property, which may be due to an off-site source. It was the owner’s position that the contamination was primarily due to an Exxon station formerly located in the current location of Route 28. There were no additional MDE records indicating how the soil contamination was addressed. In November 1995, two 290-gallon motor oil tanks, two 110-gallon motor oil USTs, two 550-gallon gasoline USTs and one 280-gallon kerosene UST were excavated and removed were excavated and removed from the site. PID readings from the excavation ranged from 10 and 500 ppm. No free product was encountered and the on-site MDE inspector approved backfilling of the excavation. No free product was encountered and the on-site MDE inspector approved backfilling of the excavation. No further work was required. Based on the information summarized above and the absence of any post-excavation analytical data to indicate otherwise, it is possible that residual concentrations of petroleum constituents could be encountered within the limits of the LOD. The second site of significant concern, an automotive sales business and tire repair shop located directly north (crossgradient) of LOD, has</p>		

SITE ID: **WAS-3616-HIGH**

Project Area Site Descriptions

<p>one closed OCP case that was opened in February 1991 and closed April 1992. Based on the information provided by MDE, a 275-gallon kerosene UST was removed on 2/28/91. The tank was approximately 40 years old and had not been used for 20 years. Upon removal, one perforation was discovered at the top of the tank. Soil screening identified a very light odor in the soil; therefore, soil was excavated from several feet below the depth of the tank and PID readings at that depth were under 50 ppm. The onsite MDE inspector granted permission to backfill the excavation site. Based on the information summarized above and the absence of any post-excavation analytical data to indicate otherwise it is possible that residual concentrations of petroleum constituents could be encountered within the limits of the LOD. Thus, further investigation may be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
5	Citgo Gas Station 15450 Georgia Avenue, Rockville MD, 20853 (cont.)	475	<p>stressed. The MDE inspector found indications of a release and the case was closed.</p> <p>2014 – Three 10,000-gallon petroleum UST was excavated and removed from the site, along with approximately 1,000 tons of impacted soil. Confirmation samples collected from the excavation revealed elevated levels of several petroleum constituents above MDE's non-residential cleanup levels. Subsequently nine soil borings were advanced to 30 to 40 feet bgs, eight of which were then completed as temporary monitoring wells. Results of the soil and groundwater investigation identified detected concentrations of various VCOs, TPH-GRO/DRO above MDE non-residential cleanup standards. Subsequently, permanent monitoring wells and continue to be sampled quarterly. According to the analytical data from January 2019 quarterly sampling report for the monitoring well (MW1) closest to the LOD, 145 feet to the northwest (upgradient), detected concentrations of benzene (4,300 ug/l) , ethylbenzene (2,310 ug/l), MTBE (661 ug/l), naphthalene (570 ug/l), toluene (15,100 ug/l), Xylenes (5,410 ug/l), THP-GRO (24.0 mg/l) and TPH-DRO (5.35 mg/l) all greatly exceed their corresponding MDE regulatory action levels. The groundwater plume is not drawn beyond the boundaries of the site; however, based on the current plume boundaries and that the LOD is hydraulically upgradient of the site. Thus impacts to the LOD are unlikely.</p>	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1959	The LOD and surrounding area appear to be used for agricultural and residential purposes. West side of Georgia Avenue appears to be undeveloped/forested land.	Aerial
1981	The LOD appears to be in its current configuration. The land abutting the LOD to the north appears to have disturbed ground. Commercial development observed to the south and west of the LOD.	Aerial
2005	The LOD and surrounding area appear to be similar to the present-day configuration.	Aerial

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	East side of River Road, north of Brookside Drive	
City	Chevy Chase	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of River Road (MD 190), immediately north of Brookside Drive, in Chevy Chase, Maryland. The surrounding area is a mix of commercial and residential developments. Commercial and residential development began prior to 1960, and is observed in its current configuration by 1963. Numerous sites listed on one or more environmental database were identified in the surrounding area. The most significant is a large redevelopment project occurring to the south/southwest, which encompasses multiple properties listed on either the DRYCLEANERS, UST, OCP, SHWS, VCP, LRP and/or RCRA Generator databases. Multiple Phase I and Phase II investigations associated with this large redevelopment project included an area covering a retirement center, located approximately 260 feet west of the southern portion of the LOD, along with a professional building to the southwest that includes a dry cleaner, two gas stations, and a large shopping center further to the southwest. The project entered into the MDE VCP program in 2014. Environmental investigations have detected petroleum and chlorinated constituents in soil and groundwater samples above MDE cleanup standards. The impacted areas are located to the south/southwest of the LOD, which is hydraulically crossgradient based on groundwater flow direction. Further, the investigations have determined the soil and groundwater in the vicinity of the Westwood Retirement Center, located directly west of the LOD, have not been impacted. Based on this, impacts to the LOD from these facility appears unlikely. The remaining facilities, which included four dry cleaners, two gas stations, and illicit spills/releases, are located between 260 feet and 615 feet from the LOD, and are believed to either be hydraulically downgradient of the LOD, or upgradient, but hydraulically disconnected from the LOD by a stream. Thus, impacts to the LOD from these remaining facilities is unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
5	Fourth Presbyterian Church/ 5500 River Road Bethesda, Md	420	FINDS/FRS – Minor air permit, no violations were noted.	Low
6	Microbiological Associates 5221 River Road Bethesda, Md	575	<p>SHSW, VCP, LUC, RCRA, SQG – According to available information of MDE's LRP website, the facility was a biological research laboratory from the from the 1960s through 1996. Site investigations in 1996, identified elevated levels of chlorinated solvents including PCE, TCE, 1,1,1-TCA, and DCE in soil and groundwater onsite. In 1998, the site was accepted into the MDE VCP program and was issued a no further action determination approximately 3 months later that stipulated that land-use controls would be imposed on the site. The land-use controls included restrictions on residential use of the site and that impacted material that had been identified onsite could be to be left in place, but soil and groundwater could not be used and/or disturbed without permission from MDE.</p> <p>OCP, UST – Historically, there have been two USTs at the site, a 1,000 gallon heating oil tank and a 6,000 gallon heating oil tank. The 1,000 gallon UST was removed from the ground while the 6,000 gallon UST was closed in place. Five OCP cases opened at the site with at least one involving a known release and cleanup efforts. All cases were closed within two years.</p> <p>Based on local topography the site is believed to be located downgradient from the LOD and is hydraulically disconnected from the LOD by a stream.</p>	Low
7	Valley Cleaners 5238 River Road Bethesda, Md	460	FED DRYCLEANERS, DRYCLEANERS, RCRA SQG – The drycleaners is currently listed as inactive. There are no known compliance violations associated with this facility. Based on local topography the site is believed to be located downgradient from the LOD and is hydraulically disconnected from the LOD by a stream.	Low
8	Kenwood Station Taylor 5233 River Road Bethesda, Md	475	FED DRYCLEANERS, DRY CLEANERS – The dry cleaner is currently listed as inactive. Based on local topography the site is located downgradient from the LOD and is believed to be hydraulically disconnected from the LOD by a stream.	Low
9	The Roof Center 5244 River Road Bethesda, Md	510	OCP – In 1991, an OCP case was opened and closed within six months. It is unknown whether a release and cleanup activities occurred. Based on local topography the site is believed to be located downgradient from the LOD and is hydraulically disconnected from the LOD by a stream.	Low

10	Citgo Gas Station 5471 Westbard Ave Bethesda, Md	550	<p>SPILLS – In 2017, an unknown amount of gasoline was released due to a truck striking a gas station pump and breaking several feet of fiberglass pipe. The UST was not leaking.</p> <p>UST, OCP– Historically, six USTs at this site. Currently, four 10,000 gallon gasohol USTs in use and two USTs permanently out of use. The two permanently out of use USTs have been removed from the ground. There have been five OCP cases opened at the site. At least two cases included a release and cleanup efforts. All cases were closed within three years and two months.</p> <p>RCRA SQG – No compliance violation associated with this facility were noted.</p> <p>Based on local topography the site is located downgradient from the LOD.</p>	Low
11	Fashion Craft Cleaners 5448 Westbard Avenue Bethesda, Md	580	FED DRYCLEANERS, DRYCLEANERS, RCRA SQG – Inactive dry cleaner. No known compliance violations were noted. Based on local topography the site is located downgradient from the LOD.	Low
12	5500 Dorset Avenue Bethesda, Md	585	SPILLS – In 2013, an unknown amount of chemical was spilled into the stream. Based on local topography the site is believed to be located upgradient from the LOD, however the site is hydraulically disconnected from the LOD by a stream.	Low
13	Minkoff Co Inc 5223 River Road Bethesda, Md	615	UST, OCP – Historically the site has had two USTs that are now permanently out of use. One tank was an 8,000 gallon tank containing gasoline while the other was a 10,000 gallon tank containing diesel. Both tanks have been removed from the ground. In 1995, an OCP case was opened involving well/groundwater contamination with motor oil. The case was closed over 15 years later. Based on local topography the site believed to be downgradient from the LOD and is hydraulically disconnected from the LOD by a stream.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Columbia Pike (US Route 29), south of Oak Leaf Drive, in Silver Spring, Maryland. The surrounding area is primarily residential, with single family residences to the west and north, while townhouses and multi-story residential apartment complexes are located to the south and east. The surrounding area was primarily undeveloped up until the late 1960s/early 1970s, when residential development began. The surrounding area was observed in its current configuration around 1988. Three properties of concern, all associated with the multi-tenant apartment complexes to the east, were listed in the UST and OCP databases. These properties are located 550 feet or greater, in a hydraulically cross- to downgradient direction from the LOD. Thus, impacts to the LOD from these sites are unlikely.</p>

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	At the end of River Service Road	
City	Bethesda	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located at the southeastern end of River Service Road, in Bethesda, Maryland. The surrounding area is observed to be primarily residential. Residential development is observed to begin prior to 1949 and continue through 2005, when the surrounding area was observed to be developed in its current configuration. There is one record of concern in the vicinity of the LOD; however, the site is located 540 feet away and is assumed to be downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	Intersection of Elkhart Street and 16 th Street (MD 390)	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary <p>The LOD is located on the west side of the intersection of 16th Street, and Elkhart Street (MD 390), in Silver Spring, MD. Elkhart Street traverses the northwestern portion of the LOD. The remainder of the LOD consists mostly of grass and is surrounded by residential development. The surrounding area has been developed since at least the 1930s. Additional commercial development was observed to the south in the 1960s. By the 1980s, the surrounding area was observed to be developed similar to its current configuration. There were three sites identified within the environmental database search. Based on a review of available information the sites are not believed to have impacted the LOD based on their proximity to the LOD and/ or type of environmental database listing associated with them.</p>

Street Address/Nearest Cross Streets	Central median of Georgia Avenue (MD 97), north of Henderson Avenue	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Georgia Avenue (MD 97), north of Henderson Avenue, in Silver Spring, Maryland. The LOD is surrounded by commercial properties to the north and east, and by residential properties on small tracts of land to the south and west. Based on historical aerial and topographic maps, the LOD was developed as Georgia Avenue by 1959. Seven environmental database listings were identified in the immediate area of the LOD. The adjacent property to the east received closure of an OCP case for a heating oil tank closure. There was no report of a release or cleanup. A drycleaner is located 525 feet to northeast (cross-gradient) of the LOD; however, there are no documented releases. An OCP case was opened due to dumping at a Pepco site located 475 feet to the southwest (cross-gradient) and was closed within a month. The other listings were not of concern to the LOD. Thus, impacts to the LOD are unlikely based on the available information on the surrounding sites.</p>

Street Address/Nearest Cross Streets	Layhill Road (MD 183), north of Glenallan Avenue	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located within the central median of Layhill Road (MD 182), between Glenallan Avenue and the entrance to the Glenmont Rail Yard, in Silver Spring, Maryland. The surrounding area includes the Glenmont Rail Yard to the northwest, Saddlebrook Police Headquarters to the east and northeast, a park to the north, and residential properties to the south and west. Based on historical aerial and topographic maps, development started prior to 1944, with the surrounding area observed in its current development in 2005. The Saddlebrook Police Headquarters was listed on the OCP and UST databases, while the Glenmont Rail Yard was listed on the OCP, UST, SPILLS, and FINDS/FRS and RCRA Generator databases. While the properties were mapped as being immediately east/west of the LOD, the operations on these properties are significantly setback off of Layhill Road, and are believed to be at least 350 feet from the LOD. An additional OCP case was listed at 550 feet from the LOD. All OCP cases associated with these facilities have been closed. Based on distances and case statuses for these facilities, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1, 3	Saddlebrook Park Police Headquarters/Maryland National Capital Park Police/ 12751 Layhill Rd Silver Spring, MD 20906	385	<p>OCP, UST – The cross-gradient police station has three permanently out-of-use USTs that were removed from the ground. Each tank removal resulted in an open and subsequently closed OCP listing.</p> <p>1993 – One 10,000-gallon heating oil tank was excavated and removed. A release was detected and cleanup was conducted. The site received closure in 1999.</p> <p>1999 – One 300-gallon diesel tank was excavated and removed. A release was detected and cleanup was conducted. The site received closure one year later in 2000.</p> <p>2010 – One 6,000-gallon gasoline was excavated and removed. A release is reported to have not occurred, and the OCP case was subsequently closed.</p> <p>Note: Although the database report lists the distance of this site as 20 feet from the LOD, the on-site building is approximately 385 feet from the LOD and is believed to be downgradient of the LOD.</p>	Low
2,4	Glenmont Rail Yard 12750 Layhill Rd Silver Spring, MD 20906	350+	<p>UST – Two currently active USTs, a 2,500-gallon gasoline and 6,000-gallon diesel, were installed on 2/1/1997. A 5,000-gallon glycol UST was previously present and may still exist.</p> <p>OCP, SPILLS – Based on information provided by MDE via a PIA request, OCP Case #00-0649M01 was opened on 10/01/00 for a compliance inspection. A violation was found for not having conducted a tightness test. On 1/24/02, tightness testing was conducted for both the gasoline and diesel USTs. The diesel UST system passed, but a line associated with the gasoline UST failed. Repairs were made to the line, bringing the site into compliance, and the OCP case was closed on 9/17/02. A second OCP case, #96-0504M01, was determined to be a duplicate of #00-0649M01. SPILLS cases #1489 and 1490 were opened in association with the failed gasoline line test. The leaked gasoline was determined to have been contained within a sump, and thus did not enter the subsurface.</p> <p>FINDS/FRS, RCRA SQG – Minor air permit, NPDES permit, generator of PCBs and other wastes. No violations noted.</p> <p>Note: Although the database report lists the distance of this site as 20 feet from the LOD, the rail yard operations are set back from Layhill Road. The closest structure to the LOD is 350 feet, which is the minimum distance the USTs would be from the LOD.</p>	Low

Watershed:	WAS	
Street Address/Nearest Cross Streets	Norbeck Road (MD 28) between Nadine Drive and Bel Pre Road	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in on the south side of Norbeck Road (MD 28), between Nadine Drive and Bel Pre Road, in Rockville, Maryland. The area consists primarily of single-family residential development, mostly built in the late 1960's. One spill occurred approximately 150 feet to the west (cross-gradient) of the LOD as a result of a motor vehicle accident in 2018. Some of the material entered a storm drain and the remainder was cleaned up with an absorbent. Based on the quantity of the spill (<5 gallons), impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	Central median of Norbeck Road (MD 28), west of Westbury Road and east of Bel Pre Road/Emory Lane	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Norbeck Road, west of Westbury Road and east of Bel Pre Road/Emory Lane, in Rockville, Maryland. The area consists primarily of single-family residential development, with the area in the south developed in the 1940's -1950's and the remaining area built in the late 1960's. In 1996, a 550-gallon inactive heating oil UST was excavated and removed from a residential property approximately 170 feet south. Soil from 2 feet below the grade of the UST was screen with a PID that recorded readings between 553 ppm to 1002 ppm. MDE instructed the contractor to excavated at least 3 feet below the grade of the former UST, stage the soil onsite and mix in 10-10-10 fertilizer to break down the hydrocarbons. The case was closed approximately 8 months later. Based on a lack of information and analytical data to assess soil and groundwater impacts associate the case, impacts to the LOD cannot be ruled out. Thus, further investigation may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along Norbeck Road (MD 28), northeast of Carrollton Road, in Rockville, Maryland. The surrounding area consists primarily of single-family residential development; the Manor Country Club is located to the south. The residential area was developed in the 1970's. A single environmental database record was found for a property located approximately 70 feet southeast (crossgradient) of the LOD, adjacent to the roadway. The ERNS 1987-1989 listing with no information provided. A PIA request was submitted for the site; however, no files were available. The release was most likely surficial in nature based on the environmental database the site is listed in. Additionally, it is believe that the site is crossgradient of the LOD. Thus, impacts are unlikely.</p>

Street Address/Nearest Cross Streets	Central median of Norbeck Road (MD 28), southwest of Muncaster Mill Road	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Norbeck Road (MD 28), southwest of Muncaster Mill Road, in Rockville, Maryland. The LOD appears to have historically been part of an orchard based on aerial imagery from 1959 and redeveloped as part of Norbeck Road in the 1980s. The surrounding area is primarily residential with an institutional development to the northeast. The surrounding area was historically agricultural and rural residential in the 1950s with further residential development observed to begin in the 1980s. Commercial development to the north is observed to begin around 1971. The surrounding area is observed to be developed in its current configuration by 2005. A catholic school approximately 455 feet north (crossgradient) of the LOD had a 550-gallon heating oil excavated and removed from the site in August 2006. Impacted subsurface media was encountered during the UST closure, which was cleaned up/remediated and the case received closure approximately 2 months later. Based on site's inferred hydraulic gradient in relation to the LOD, impacts are unlikely. However, since the area and LOD have been utilized as an orchard in the 1950s, there is a possibility that residual concentrations of organochlorine pesticides, such as dieldrin, DDT, chlordane, and lindane may be present in soils and sediments within the boundary of the LOD. Further investigation may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Street Address/Nearest Cross Streets	Central median of Layhill Road (MD 182), between Ballows Way and Norvale Road	
City	Aspen Hill	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Layhill Road (MD 182), between Ballows Way and Norvale Road, in Aspen Hill, Maryland. The surrounding area is observed to be a mixture of commercial and residential properties. Development of the surrounding area is observed to being prior to 1959. Residential and commercial development in the surrounding area continued through 2005, when the surrounding area was observed to be developed in its current configuration. There are several sites with database listings in the vicinity of the LOD, however, most site do not involve releases or are at distance from the LOD where impacts are unlikely. One site located approximately 200 feet west/northwest (crossgradient) of the LOD had a 550-gallon heating oil UST was excavated and removed from the site in 2000. According to available records, several inches of impacted soil below the grade of the UST were observed; however, it is unknown whether the soil was excavated and removed. Impacts to the LOD are unlikely based on the crossgradient proximity of the site relative to the LOD.</p>

Street Address/Nearest Cross Streets	West side of New Hampshire Avenue (MD 650), north of Sherbrook Drive	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the west side of New Hampshire Avenue (MD 650), north of Sherbrook Drive, in Silver Spring, Maryland. It includes the southbound lanes and median of New Hampshire Avenue, as well as a strip of land on the west side of the road. Both median and strip are lined with trees, and there is a sidewalk on the west side of the road. The land on the west side of New Hampshire Avenue is primarily low-density residential development; denser development lies to the east and south. Two schools are located northeast of the LOD. The area was mostly developed in the 1950's and 1960's. The only site identified in the environmental records search is a middle school located over 400 feet from the LOD. It is a RCRA CESQG with no violations and had a heating oil UST removed with no product release. Based on the local topography, the site is believed to be hydraulically crossgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

1	White Oak Middle School 12201 New Hampshire Avenue Silver Spring, MD	405	FINDS/FRS, OCP, RCRA CESQG, UST. This school had a 20,000-gallon heating oil UST installed in 1970 and removed in 1992; the OCP case was opened and closed in 1992 and does not indicate a release or cleanup. The school is also a RCRA conditionally exempt small quantity generator of ignitable, corrosive, and reactive wastes; no violations are on record. Based on local topography, this site appears to be crossgradient of the LOD.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1937	LOD and surrounding area consist of agricultural fields. New Hampshire Avenue is visible, but narrower than its current configuration.	Aerial
1959	LOD is unchanged, scattered low-density residential development visible on west side of New Hampshire Avenue; denser residential development to the south of LOD. Jackson Road Elementary School is visible to the northeast.	Aerial
1963	New Hampshire Avenue appears to have been widened into its current configuration, LOD is similar to present conditions. New residential development is visible east/northeast of LOD. White Oak Middle School is visible to the north.	Aerial
1971-2018	LOD and surrounding area are generally unchanged and similar to existing conditions.	Aerial

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of University Boulevard W (MD 193), east of Madison Street, in Kensington, Maryland. The LOD is surrounded by high-density residential development on small tracts of land. Based on historical aerial and topographic maps, the LOD was developed as University Boulevard W before 1959. Based on the 1959 aerial photograph, the LOD is part of University Boulevard W with residential development in the surrounding areas. The LOD and surrounding area have been similar to their current configuration since observed commercial and additional residential development in the 1964 aerial photograph. Four environmental database listings were identified in the immediate area of the LOD, some of which are duplicate entries. The Waterford Apartment complex located 510 feet northeast (cross-gradient) of the LOD had an OCP case opened for a heating oil UST removal in 1993, which received closure less than a year later in 1994. There was no report of a release or cleanup. Thus, impact to the LOD is unlikely.</p>

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of University Boulevard W (MD 193), east of St. Paul Street, in Kensington, Maryland. The LOD is surrounded by high-density residential development on small tracts of land. Albert Einstein High School is located to the north. Based on historical aerial and topographic maps, the LOD was developed as University Boulevard W before 1959. Based on the 1959 aerial photograph, the LOD is part of University Boulevard W with residential development in the surrounding areas. The LOD and surrounding area have been similar to their current configuration since observed commercial and additional residential development in the 1964 aerial photograph. Five environmental database listings were identified in the immediate area of the LOD. In 2007, there was a release of 2.5 gallons of hydraulic oil to a storm drain approximately 40 feet southeast (cross-gradient) of the LOD. Cleanup was completed. Based on volume, completion of cleanup action, and gradient, impact to the LOD from this site is unlikely. The Waterford Apartment complex located 210 feet north (cross-gradient) of the LOD had an OCP case opened for a heating oil tank closure in 1993 and received closure less than a year later in 1994. There was no report of a release or cleanup, therefore, impacts to the LOD from this site are unlikely. The remaining listings are either just listed in registries or have closed status. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	Georgia Avenue (MD 97), north of Veirs Mill Road (MD 586)	
City	Wheaton	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in the median of Georgia Avenue (MD 97), north of Veirs Mill Road (MD 586), in Wheaton, Maryland. The LOD is surrounded by commercial development to the north and south. The Wheaton bus station and a shopping mall are located to the west. High rise apartments are located to the east. Based on historical aerial and topographic maps, the LOD was developed as Georgia Avenue before 1959. Based on the 1959 aerial photograph the LOD is part of Georgia Avenue with commercial development in the surrounding areas. The LOD and surrounding area has been similar to their current configuration since observed additional commercial and residential development by 2005 aerial photograph. Sixteen sites were identified in environmental database report, in the immediate area of the LOD. Eleven of those sites had reported releases or UST closures between 50 feet to 600 feet, downgradient of the LOD. There is a SHWS site located approximately 600 feet to the south that has received closure with land-use controls imposed on the site; however, this site is believed to be downgradient of the LOD as well. An OCP case approximately 50 feet to the east of the LOD is associated with a former Gas Station that is currently a large apartment complex that was constructed in the past 10 years. Any impacted materials were mostly addressed during the development and construction of the property. Based on the available information regarding these sites, impacts to the LOD are unlikely.</p>

 A topographic map from 1944 showing the project area. A pink line highlights a section of University Boulevard W. The map includes contour lines, a river labeled 'Chestn R', and the number '387'.	 A black and white aerial photograph from 1959 showing the project area. A pink line highlights a section of University Boulevard W. The surrounding area is mostly undeveloped with some trees and a few buildings.	 A black and white aerial photograph from 2005 showing the project area. A pink line highlights a section of University Boulevard W. The surrounding area shows increased residential development, with many houses and paved roads visible.

Project Area Site Descriptions

LOD ID: WAS-3650	Site Rank: Low	Figure Location: 
Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Central median of Colesville Road, north of Crestmoor Drive	
City	Silver Spring	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in a central median of Colesville Road (US Route 29), north of Crestmoor Drive, in Silver Spring, Maryland. The surrounding area is woodlands and residential developments. The North Branch of the Anacostia River is to the east, and beyond that is a commercial area just west of where Colesville Road becomes Columbia Pike. Residential development occurred during the 1940s and 1950s, while commercial development occurring during the 1970s and 1980s. The area surrounding the LOD has been observed in its current configuration since 2005. Three facilities were listed in the various databases; two for sewage releases, one for illegal dumping of refuse, and a mis-mapped former gas station identified on the UST and OCP databases. Further evaluation determined the former gas station was located 1,330 feet from the LOD. Based on the type of incident or distance from the LOD, impacts to the LOD from these sites are unlikely.</p>

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	East side of Hungerford Drive (MD 355), south of the intersection with N Washington Street	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the east side of Hungerford Drive (MD 355), south of the intersection with N Washington Street, in Rockville, Maryland. The LOD consists of a portion of a northbound lane of the road, a landscaped strip of shade trees, a sidewalk, and a portion of the parking lot of The Fitz, a condominium complex located directly east of the LOD. The surrounding area is heavily developed, primarily with commercial uses. Hungerford Rd was constructed in the early 1950's, with development along the road taking place mainly in the 1960's – 1980's. A property approximately 70 feet west of the LOD is listed an MDE VCP site. The facility had one 15,000-gallon diesel UST that was installed in 1978 and removed in 2003. An OCP case for a release and cleanup was opened in 2003 and closed in 2004. The site is on the SHWS and VCP lists. In 2003 a NFRD was issued, restricting the property for commercial or industrial use and prohibiting use of groundwater beneath the property for any purpose. Based on a review of available data, no chemicals or concern were detected in soil boring and groundwater sample collected from the southeastern portion of the site, west of the southern portion of the LOD; however, detected concentrations of benzene (120 ug/l) chloroform (1 ug/l), xylenes (11 ug/l), MTBE (170 ug/l) were recorded in the sample collected along the north-central boundary, approximately 175 feet west of the northern portion of the LOD. Based on groundwater elevation data provided in the available reports, groundwater flows, west/northwest to east/southeast in the direction of the LOD. As this facility appears hydraulically upgradient of the LOD, further investigation is warranted to determine whether or not impacts from this site has impacted environmental media within the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1/2	Walgreens Drug Store 15117 439 Hungerford Dr	240	FINDS/FRS, RCRA CESQG. This pharmacy is a RCRA CESQG of a variety of wastes, no violations noted.	Low
3, 5	Freestate Gas Station 510 Hungerford Drive	330	FINDS/FRS, ICIS, OCP, UST. This gas station has six FRP USTs in service, all installed in 2003. These include a 12,000 and 20,000 gallon diesel; 20,000 and 8,000 gallon kerosene; and two 20,000 gallon gasohol USTs. In addition, tanks were removed from service in 1995 (550 gallon CPS used oil and 550 gallon AC/BS heating oil tanks) and 2003 (8,000 gallon gas (3), diesel, and kerosene (2), all CPS). These tanks had been installed in 1985. There are two OCP cases for the station, a closed case from 1987 with no information, and a closed case from 1990-2011 involving well/groundwater contamination with motor/lube oil. The gas station operates under a minor air permit and non-major NPDES permit. The LOD is believed to be crossgradient from the gas station.	Low
4	Maryland National Center 340 Washington Street, North	80	FINDS/FRS. This facility operates under a minor air permit, no violations were noted.	Low
6,9	Health & Human Services Office, MO County Section 1, Montgomery County Office Building, Hungerford Office Building, 401 Hungerford Dr	390	OCP, UST. One 500-gallon diesel UST installed in 1988 and removed (date unknown). Closed OCP cases for a 2008-2010 motor/lube oil tank closure with no release/cleanup; case from 1993-1995 with no information provided, and case from 1993 with no information provided. Based on the local topography, the site is believed to be downgradient of the LOD.	Low

SITE ID: **WAS-3652-MODERATE**

Project Area Site Descriptions

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
7,8	Gateway Tower, GE Bldg, 401 North Washington St General Electric, Rockville, General Electric Info Services, Gateway Tower, Maryland Center 401 N Washington St.	80	SHWS, UST, LUC, OCP. The facility had one 15,000-gallon diesel UST that was installed in 1978 and removed in 2003. An OCP case for a release and cleanup was opened in 2003 and closed in 2004. The site is on the SHWS and VCP lists. In 2003 a NFRD was issued, restricting the property for commercial or industrial use and prohibiting use of groundwater beneath the property for any purpose. Based on a review of available data, no chemicals or concern were detected in soil boring and groundwater sample collected from the southeastern portion of the site, west of the southern portion of the LOD; however, detected concentrations of benzene (120 ug/l) chloroform (1 ug/l), xylenes (11 ug/l), MTBE (170 ug/l) were recorded in the sample collected along the north-central boundary, approximately 175 feet west of the northern portion of the LOD. Based on groundwater elevation data provided in the available reports, groundwater flows, west/northwest to east/southeast in the direction of the LOD. Thus, there is a possibility that groundwater is impacted within the boundaries of the LOD. FINDS/FRS, RCRA VSQG - The facility is a RCRA CESQG with no violations, and it operates under a minor air permit, no violations noted.	Moderate
10	Rockville-Main Post Office 560 Washington Street, North	440	FINDS/FRS. This post office operates under a minor air permit, no violations noted.	Low
11,12	US Post Office, US Postal Service 500 North Washington Street	450	OCP, UST. This post office had a 10,000 gallon asphalt coated or bare steel gasoline tank, which was installed in 1981, removed in 1997. There are two closed OCP cases, one for a motor/lube tank closure in 1995-1997 with no release, and one for a motor/lube tank closure in 1997-1998, with a release and clean up.	Low
13	Thorobred Motors 300 N Washington St	500	OCP. The facility has a closed OCP case from 1991-1993, no information is provided. The site is believed to be downgradient of the LOD.	Low

Street Address/Nearest Cross Streets	Central median of Frederick Road (MD 355), south of Indianola Drive	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Frederick Road (MD 355), south of Indianola Drive, in Rockville, Maryland. The surrounding area is a mix of commercial and residential properties. Commercial properties include multiple automotive dealerships, and automotive repair shops. Based on historical imagery, it appears that the commercial properties were developed in the 1970s and 1980s and the residential properties were developed between the late 1980s and early 2000s. Fourteen sites, mostly associated with automotive sales and repair facilities were identified in the area surrounding the LOD. The automotive repair and sale facilities located to the east, northeast, and southeast of the LOD have multiple UST, OCP, and SPILL cases associated with them; however, impacts from these site are unlikely since they are believed to be hydraulically downgradient of the LOD. An active used car dealership/auto repair facility known as A-1 Auto Sales is approximately 40 feet to the east of the LOD. No environmental records associated with the property were identified; however, due to the current use of the property, automotive fluids and petroleum products are most likely used/stored onsite, and could have been potentially released into the ground, which may have impacted soil and groundwater within the boundaries of the LOD. Therefore, further investigation may be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
N/A	15605 Frederick Road, Rockville, MD	40	Auto repair facility – The site is an active used car dealership that also conducts automotive repairs onsite. No environmental records associated with the property were identified; however, due to the current use of the property, automotive fluids and petroleum products are most likely used/stored onsite, and could have been potentially released into the ground, which may have impacted soil and groundwater within the boundaries of the LOD.	Moderate
1 & 2	National Tire & Battery 15609 Frederick Road, Rockville, MD, 20855	55	<p>RCRA – The site is active auto repair facility and is registered as a RCRA very small quantity generator, no violations. Although ERIS lists this property as 10 feet from the LOD, the actual distance from the LOD is approximately 55 feet.</p> <p>OCP, SPILLS – According to available records provided by MDE through a PIA request, an OCP case was opened in 1995, due to a tow truck rupturing their gas tank onsite and releasing approximately 8-10 gallons of gasoline onto the ground, some of which reached a nearby storm drain. The inspection reported filled out by the MDE inspector stated that release was contained and a majority of the material was recovered. MDE closed the case approximately 3 days later.</p> <p>A second OCP case was opened in 2016, after reports of improper storage of petroleum and automotive fluids was reported to MDE. MDE found that the oil/water separator needed to be cleaned out and that it needed to be inspected more often to make sure no oils were being discharge to the sewer system. MDE also requested that excess used automotive fluids and tires be removed soon and disposed of at a regulated facility. MDE did not identify any substantial environmental impacts during their inspection and closed the case approximately 8 months later.</p>	Low
3, 4, 7, 8, 9	Performance Plus/ Shannon Auto Body/ All Tune & Lube 15563 Frederick Road, Rockville, MD, 20855	240	FINDS/FRS, RCRA-SQG- Registered as a RCRA very small quantity generator, no violations. Although ERIS lists this property as 14 feet from the LOD, the actual distance from the LOD is approximately 240 feet.	Low
5	Henderson's Honda Auto Shop 15557 Frederick Road, Rockville, MD	290	Registered as a RCRA small quantity generator, no violations. Although ERIS lists this property as 20 feet from the LOD, the actual distance from the LOD is approximately 290 feet.	Low
6	Henderson's Honda Body Shop 15555 Frederick Road, MD, Rockville, 20855	280	FINDs/FRS – The site was listed as a new and used car dealership and had an ICIS record for air; an in-compliance inspection was noted. Although ERIS lists this property as 26 feet from the LOD, the actual distance from the LOD is approximately 280 feet.	Low

Ranking Rationale Site Summary		
<p>The LOD is located on the North side of Norbeck Road (MD 28), north of Baltimore Road, in Rockville, Maryland. The LOD consists of a breakdown lane of Norbeck Road, a strip of trees, a sidewalk, and part of a minor street, also called Norbeck Road. The area north of the road consists of residential development, with the Rock Creek Village Center shopping center to the south. Development in the area generally occurred from the 1970's-1980's. A drycleaner and a gas station were identified over 600 feet to the northeast (upgradient) of the LOD. No releases were reported at the drycleaner. A gas station with closed OCP cases is located approximately 635 east of the LOD. The sites are believed to be hydraulically upgradient of the LOD; however, based on their distance from the LOD, impacts are unlikely.</p>

Street Address/Nearest Cross Streets	North side of Norbeck Road (MD 28), south of Marlin Street	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located on the north side of Norbeck Road (MD 28), south of Marlin Street, in Rockville, Maryland. The LOD consists of roadway a median with trees between Norbeck Rd and Norbeck Road Service Road and includes part of both these roads. The site is surrounded by residential development, other than the Rock Creek Village Shopping Center to the southwest. Development primarily occurred in the 1960's. Multiple database listings for the Rock Creek Village Shopping Center that includes the Village Exxon (approximately 320 feet southwest) and Rock Creek Village Cleaners (approximately 840 feet southwest) were identified in the environmental database report. The shopping center entered into the MDE VCP in 2011 after, and is subject to land use controls (restricted commercial or industrial, use of groundwater prohibited), based on previous environmental investigations that took place at the site, between 1997 and 2011, found PCE in soil, groundwater, and soil gas near the dry cleaner and, near the gas station, MTBE in in soil and groundwater and diesel range organics, and petroleum range organics in groundwater. Based on available information, the sites are believed to be downgradient of the LOD. Several other database listings were identified to the west/southwest (downgradient) of the LOD, which are believed to not be a concern as well. Thus, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,2,5,7	Rock Creek Village Shopping Center, Exxon, Exxon #26338 5500-5576 Norbeck Rd.	320 to 840	<p>LUC, SHWS, VCP. This site is a state hazardous waste site, is under the voluntary cleanup program, and is subject to land use controls (restricted commercial or industrial, use of groundwater prohibited). This site includes the Village Exxon and Rock Creek Village Cleaners. Environmental investigations at the site, taking place between 1997 and 2011, found PCE in soil, groundwater, and soil gas near the dry cleaner and, near the gas station, MTBE in in soil and groundwater and diesel range organics, and petroleum range organics in groundwater. The drycleaner's location in the shopping center is believed to be approximately 840 feet southwest (downgradient) the LOD.</p> <p>OCP, UST. The Exxon gas station has currently has three USTS onsite, and five permanently out of use. The three tanks in use include a 15,000-gallon compartment tank that contains diesel and gasohol along with a 15,000-gallon gasohol tank. Out of service tanks were installed in 1980 and removed in 1996 (1,000-gallon used oil), 1999 (1,000-gallon heating oil), and 2015 (two 8,000-gallon and one 12,000-gallon gasohol). There were release/cleanups reported for a closure in 2007 and in 1996-2000, no release was reported for the 2015 closure.</p> <p>SPILLS. There are five Spills records for the facility, all for a single 30-gallon diesel spill that occurred during a pick-up truck refueling in 2017, the spill was stopped and cleaned up.</p> <p>FINDS/FRS, RCRA CESQG. The station is a CESQG of ignitable waste, lead, and benzene; no violations are reported.</p>	Low
3,6	Rock Creek Village Cleaners 5516 Norbeck Rd	350	Drycleaners, FED Drycleaners, FINDS/FRS, RCRA SQG. This drycleaner is a RCRA SQG and operates under a minor air permit. No violations are noted.	Low
4	Bauer Park Apts 14635 Bauer Lane	105	OCP. An OCP case was open from 2001-2002; it did not involve a release/cleanup.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Veirs Mill Road (MD 586), between Woodburn Road and Edmonston Drive, in Rockville, Maryland. The surrounding area consists primarily of single-family residential development, along with an elementary school to the north and a park to the south, both with active recreation, including baseball fields. Development occurred in the 1940's and 1950's. Two environmental database records were identified in the vicinity of the LOD, one for a very small spill and the other for a removed UST with no history of a release, both over 300 feet hydraulically crossgradient from the LOD. Thus, Impacts to the LOD are unlikely.</p>

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Norbeck Road (MD 28), west of Baltimore Road, in Rockville, Maryland. The area surrounding the LOD is mostly forested land with residential properties to the east. Norbeck Road was first observed in the early 1970s, prior to that the area was entirely forested land. Residential development began to the east in the early 1970s and continued until the early 1980s when the area was observed in its current configuration. A spill of approximately 5 gallons of gasoline was identified 350 feet to the east of the LOD. Based on the size of the spill and distance from the LOD, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	Along the off ramp from I-495 to Branch Avenue (MD-5)	
City	Temple Hills	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the offramp from I-495 onto Branch Avenue (MD-5), in Temple Hills, Maryland. The surrounding area is residential properties to the south, the interstate to the north, and the highway to the southeast of the LOD. Residential development and transportation construction are observed to begin in 1949. The surrounding area is observed to be in its current configuration in 2009. There are two SPILLS and an OCP case in the surrounding area. The OCP case, is believed to be 170 feet downgradient/crossgradient of the LOD, and involved a release and cleanup actions due to a transfer accident. The spill was most likely surficial in nature and was closed the same day it was opened; therefore, the incident is unlikely to have affected the LOD. The second spills case involved the release of 200 gallons of no. 2 heating oil into the ground; however, the site is believed to be approximately 345 feet downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

<p>The LOD is located north of the intersection of Manchester Drive and Deer Pond Lane in Camp Springs, Maryland. The surrounding area includes forested land to the north, a commercial structure and Branch Avenue (MD 5) to the west, and residential structures to the east and south. Development of the immediate surrounding area occurred in the 1950s, and is observed in its current configuration by 2005. A church located 70 feet southwest of the LOD previously had a 550-gallon heating oil UST removed in 1994. Information obtained from MDE stated a release had not occurred. Following removal of the 550-gallon UST, a new 280-gallon heating oil UST was installed in its place. The 280-gallon UST is comprised of a composite of steel and fiberglass-reinforced plastic and contains overfill protection. Following installation of the 280-gallon UST, the tank system passed a tightness test. Review of aerial photographs identifies this UST at approximately 190 feet from the LOD. Based on this information, impacts to the LOD from the church's former and existing USTs are unlikely. A residence located 605 feet to the east was also listed on the OCP database for the closure of a heating oil tank. A release and cleanup were noted; however, based on the distance from the LOD, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located west of the intersection of Clarksburg Road and Frederick Road (MD 355), in Clarksburg, Maryland. The surrounding area is a mix of commercial and residential properties. Residential and commercial development is observed to begin prior to 1959. The surrounding area is observed to be in its current configuration by 2005. The LOD sits on/abuts a bank that had a 550-gallon heating oil UST closed in place in 2015, approximately 85 feet northwest (upgradient) of the LOD. Based on available data provided by MDE through a PIA request, a soil sample was collected, approximately 9ft bgs from both east and west sides of the UST and analyzed for TPH-DRO and VOCs. Based on the analytical data, no VOCs were detected in either of the two samples and TPH-DRO was detected at 1,378 mg/kg in the soil sample from the western end of the UST; however, TPH-DRO was not detected above its reporting limit of 30.31 mg/kg in the sample collected from the eastern side of the UST. Based on the information summarized above, residual petroleum is known to be present in the subsurface soil approximately 85 feet northwest (upgradient) of the LOD; therefore, further investigation may be warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Damascus Community Branch/ Clarksburg Branch 23400 Clarksburg Road Clarksburg, Md	85	UST, OCP – In 2015, an OCP case was opened for the closure of a 500-gallon heating oil UST located off the northwest side of a bank facility, approximately 85 feet northwest of the LOD (upgradient). Based on available data provided by MDE through a PIA request, it was not feasible to excavate the UST due to its proximity to the existing structure and several utility lines. Subsequently, the UST was opened, cleaned, and filled with gravel. A soil sample was collected via soil borings, approximately 9ft bgs from both the west and east sides of the UST and analyzed for TPH-DRO and VOCs. Based on the analytical data, no VOCs were detected in either of the two samples and TPH-DRO was detected at 1,378 mg/kg in the soil sample from the western end of the UST. TPH-DRO was not detected above its reporting limit of 30.31 mg/kg in the sample collected from the eastern side of the UST. Based on the information summarized above, residual petroleum is known to be present in the subsurface soil approximately 85 feet northwest (upgradient) of the LOD. Thus, impacts cannot be ruled out.	Moderate
2	Ben Lewis Plumbing 23407 Frederick Road Clarksburg, Md	100	FINDS/FRS – Heating/plumbing company permit, no violations were noted	Low
3	Clarksburg Liberty/Whipps Mobil /Whipps Garage Inc 23300 Clarksburg Road Clarksburg, Md	330	OCP – There have been three OCP cases onsite, two of which have been closed and one opened in September 2020 and remains open. One of the closed cases involved a release while the other two did not. UST – There are seven USTs at this location. Three of the USTs are permanently out of use and have been removed from the ground. The four remaining USTs include three 8,000 gallon gasohol USTs and one 8,000 gallon diesel UST. Although the site is listed as 445 feet from the LOD, it measures 330 feet. Based on local topography, the site is located downgradient from the LOD.	Low
4	Clarksburg United Methodist Church 23425 Spire Street Clarksburg, Md	495	OCP – In 2011, an OCP case was opened during a commercial heating oil tank closure. A release and cleanup actions are noted. The case was closed within six months. Based on local topography, the site is believed to be crossgradient of the LOD.	Low
5	Albert Randall Residence 23340 Frederick Road Clarksburg, Md	510	OCP – In 2007, an OCP case was opened due to a leaking residential heating oil AST. A release and cleanup actions are noted. The case was closed within three months. Based on local topography, the site is upgradient from the LOD; however, the LOD is believed to be hydraulically disconnected from the site by a stream.	Low

Ranking Rationale Site Summary		
The LOD is located along the east side of Ridge Road (MD 27), southeast of Valley Park Drive, in Damascus, Maryland. The surrounding area is forested with some residential properties. The surrounding area was primarily agricultural land up until the 1990s, when commercial and residential development began to occur. The surrounding area was observed to be developed in its current configuration by 2005. No records of concern in the vicinity of the LOD were identified during the environmental review.

Street Address/Nearest Cross Streets	West side of Woodfield Road (MD 124), north of Bethesda Church Road	
City	Damascus	
County	Montgomery	
Type of property	ROW/private	
Ranking Rationale Site Summary		
<p>The LOD is located along the side of Woodfield Road (MD 124), north of Bethesda Church Road, in Damascus, Maryland. The surrounding area is a mix of commercial and residential developments, which began prior to 1959. The surrounding area was observed to be developed in its current configuration by 2005. Two facilities listed on the OCP and UST databases were identified. The first, an auto body shop located 305 feet from the LOD, previously had four USTs. Based on information provided by MDE, a 4,000-gallon heating oil UST and a 20,000-gallon heating oil UST were removed from the site in 1990, a 1,000-gallon used oil UST was removed in 1993, and a 4,000-gallon heating oil UST was removed in 2010. Regulatory documentation revealed that releases had not occurred from any of the heating oil USTs; however, no documentation was available regarding the 1,000-gallon used oil UST. Based on local topography this site is located upgradient from the LOD, but considering that no impacts were identified with the heating oil USTs, and impacts from used oil, if present, typically do not migrate significantly, impacts to the LOD from this facility are unlikely. The second facility, located 590 feet downgradient of the LOD, had five historical USTs with reported releases; however, based on the distance and the inferred hydraulic direction (crossgradient) from the LOD, impacts are unlikely.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Damascus Auto Body 26100 Woodfield Road Damascus, Md	305	<p>OCP, UST – One 4,000-gallon and one 20,000-gallon heating oil UST were excavated and removed from the site in 1990. Both UST were found to be free of holes and no impacted soil was observed in the excavation; therefore, the MDE inspector onsite instructed the excavation to be backfilled and the case was closed in 1993.</p> <p>In 2010, a 4,000-gallon fiberglass heating oil UST was excavated and removed from the site. The UST was found to be free of holes and no impact soil was observed in the excavation. Two confirmation soil samples were collected from approximately 10 feet below grade and analyzed for TPH-DRO/GRO and VOCs, all of which were non-detect. Therefore, the site was granted closure by MDE in 2011.</p> <p>Records also state that a 1,000-gallon used oil UST was excavated and removed from the site in 1993, as well; however, no regulatory documentation was available on this UST.</p> <p>Based on local topography the site is believed to be upgradient from the LOD.</p>	Low
2	Woodfield Road Station Inc 26120 Woodfield Road Damascus, Md	590	<p>OCP – In 1990, an OCP case was opened due to a tank closure. A release and cleanup efforts are noted. The case was closed eight years later.</p> <p>UST – Previously, five USTs were present. All USTs are permanently out of use and have been removed from the ground. The tanks ranged from 1,000 gallons to 8,000 gallons in size and contained gasoline, diesel and kerosene.</p> <p>Based on local topography the site is believed to be crossgradient of the LOD.</p>	Low

Ranking Rationale Site Summary		
The LOD is located along the east side of Beallsville Road (MD 109) between Hillrise Lane and Barnesville Road, in Barnesville, Maryland. The surrounding area is a mix of rural agricultural land and forested areas. No substantial changes to the surrounding have occurred since at least the 1960s. A spill incident was identified approximately 20 feet west of the LOD in the environmental database report. According to available information, an oil delivery technician was filling a residential AST and spilt approximately 0.125-gallons of oil in the basement of the residence. The spill was cleaned with a spill pad. Based on the amount of oil released and that the incident occurred indoors, impacts to the LOD are unlikely.

Street Address/Nearest Cross Streets	Southwest corner of the intersection of Ridge Road and Davis Mill Road (MD 27)	
City	Germantown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located off the southwest corner of the intersection of Ridge Road and Davis Mill Road (MD 27), in Germantown, Maryland. The surrounding area is semi-rural with some residential and commercial properties. Residential and commercial development is observed to begin in the surrounding area prior to 1959 and continued through 2005, when the surrounding area was observed to be developed in its current configuration. A gas station is located 430 feet north (downgradient) of the LOD that currently has two active petroleum USTs (12,000-gallon and 16,500-gallon) and seven inactive USTs and two inactive ASTs that have been removed from the site. In 2002, an OCP case was opened due to well/groundwater contamination. Remediation/cleanup actions were taken and the case was eventually closed. Based on local topography the site is believed to be located downgradient from the LOD. Thus, impacts are unlikely.</p>

County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Beallsville Road (MD 109), south of the intersection of Sellman Road, in Dickerson, Maryland. Forested land and several structures are observed to the west and northwest of the LOD. Rural agricultural land along with several structures are observed to the east and south of the LOD. No substantial changes to the surrounding area are observed since at least the 1950s. One release was reported approximately 135 feet from the LOD involving an approximately 200 pounds of batteries in 2016. Available records state that contractors performed the cleanup. Based on local topography the site is believed to be downgradient/crossgradient from the LOD. Thus, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located east side of N Frederick Road (MD 355), south of the Milestone Manor Lane, in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land to the north, west and south, the Ridge Road Recreational Park to the east and northeast, and forested land to the southeast. Based on historical aerial and topographic maps, the LOD has never been developed, but has been part of agricultural land. Based on the 1959 aerial photograph, N Frederick Road was present and the LOD and surrounding areas were agricultural land. Residential development started in 1993 with the LOD and surrounding areas being similar to their current configuration by 2005. One environmental database listing was identified in the immediate area of the LOD; however, the address is incorrect, and the gas station is actually located 0.3 mile to the south (cross-gradient). Thus, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along Central median of Ridge Road (MD 27), east of N Fredrick Road (MD 355), in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land to the east, commercial development to the south, and west, and the Ridge Road Recreational Park to the north. Based on historical aerial and topographic maps, the LOD was developed as Ridge Road by 2005. Three environmental database listings were identified in the immediate area of the LOD, while one site was misplotted and was found to be over 1.5 mile west of the LOD. The Exxon has closure status, the other release listing is a minor spill of heating oil. A gas station is located approximately 100 feet south (downgradient) of the LOD that currently has two gasoline USTs (15,000 gallon and 10,000 gallon) installed in 2010. The station is listed as a minor air source. A SPILL record was reported on 10/5/2015 for the underground contaminant system. There was no release, but there was an error with the system holding air. Based on a review of information provided through a PIA request, there are known environmental impacts or release to the environmental associated with this gas station. Thus, impacts to the LOD are unlikely.</p>

PID readings from the excavation recorded at 0.0 ppm. A soil sample was collected from approximately 10 feet bgs and analyzed for TPH-DRO, BTEX, and MTBE, all which were non-detect with the exception of a detected concentration of TPH-DRO at 29.7 mg/kg, which is below the MDE non-residential action level of 230 mg/kg. Based on the results of the investigation, the case was closed approximately 3 weeks later.</p> <p>HMIRS – In 2007, approximately 5-gallons of gasoline was released during a transfer accident.</p>	Moderate
3	Applebees 21408 Frederick Rd Germantown, MD 20876	250	FINDS/FRS – The restaurant is in the database as an air source. No violations found.	Low
3	11011 Ridge Rd Germantown, MD 20876	560	HMIRS – This listing is for a release of 0.25 gallons of heating oil in the basement to the topsoil that was removed and disposed of. Based on quantity of material released, impacts to the LOD are unlikely.	Low

City	Germantown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of N. Frederick Road (MD 355), south of Middlebrook Road, in Germantown, Maryland. The LOD is surrounded by commercial properties to the north and west and by residential on small tracks of land to the east and south. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944 and commercial development in the surrounding area was observed by 1993. Ten environmental database listings were identified in the immediate area of the LOD. A trailer park is located directly east of the LOD and has had multiple OCP cases opened due to leaking petroleum storage tanks and surficial releases. A former drycleaner is located approximately 150 feet north of LOD and a VCP site. Soil contaminants included PCE and TPH-DRO. Groundwater contaminants included TCE, cis 1,2-DCE, vinyl chloride, PCE, and both TPH-GRO/DRO compounds. The property entered into the VCP program in 2002 and was issued with an NFRD later that year with land-use controls on soil/groundwater use, as well the maintenance/ upkeep of monitoring wells on-site as long as the dry cleaning operations occur and future owner may request abandonment. Based on the proximity of the trailer park and dry-cleaning facility with respect to the LOD, impacts to the LOD cannot be ruled out. Thus, further investigations are warranted to determine whether or not impacts are present within the boundaries of the LOD.</p>

5	Nu Look Cleaners 19609 Frederick Rd Germantown, MD	150	<p>RCRA VSQG, FINDS/FRS, Drycleaners , FED Drycleaners – The drycleaners is a VSQG for spent halogenated solvents. No violations were noted.</p> <p>OCP, UST - The facility has two permanently out-of-use heating oil USTs (550 gallons and 1,000 gallons) that were removed from the ground on 3/2/2001. There are two associated OCP cases: 2/21/1995 – Case was opened for a release from a surface spill from a motor/lube oil UST that did have cleanup activity and closure was granted on 9/4/2003. 3/2/2001 – Case was opened for a heating oil tank closure. A release and cleanup was reported. Closure was granted on 10/1/2001.</p> <p>VCP, LUC, SHWS. The facility was listed in the SHWS and VCP databases with chlorinated and petroleum contamination in soil and groundwater. In June 1995, the Maryland SHA conducted an environmental assessment to investigate the use of the property as a stormwater management pond for its road expansion program. Several USTs were discovered and a soil gas survey concluded the presence of elevated petroleum hydrocarbons and chlorinated solvents across the property. In 1998, the SHA removed two gasoline USTs from the western perimeter of the property that was acquired for road expansion. On March 2, 2001, the MDE OCP oversaw the removal of two heating oil USTs (550- and 1000-gallon) and the removal of 10 tons of petroleum-impacted soils. A 75-gallon drum with unknown contents was also discovered at the southeast corner of the dry cleaning facility. Product was pumped from the drum and containerized for disposal purposes. Limited subsurface investigations conducted in 2001 revealed chlorinated solvents commonly associated with the on-site dry cleaning operation and residual petroleum hydrocarbons from former gas station operations. Soil contaminants included PCE and TPH-DRO. Groundwater contaminants included TCE, cis 1,2-DCE, vinyl chloride, PCE, and both TPH-GRO/DRO compounds. The property entered into the VCP program in 2002 and was issued with an NFRD later that year. According to the LUC listing. Paving and foundations must be maintained must be maintained within a limited area.</p>	Moderate

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
6	N&S Sales & Rentals, Inc. 19600 Frederick Rd Germantown, MD	275	UST – The previous gas station has four permanently out-of-use USTs that were installed on 1/1/1974 and removed from ground on 12/1/1989 (tanks 1, 2, and 3) and 11/7/1990 (tank 4). No releases were reported. The facility is believed to be downgradient of the LOD.	Low
7	7-Eleven 19700 Frederick Rd Germantown, MD	585	OCP, UST, FINDS/FRS, ICIS – The gas station is believed to be downgradient to the LOD. The gas station has two currently-in-use gasohol USTs (10,000 gallons and 15,000 gallons) that were installed on 9/1/2001. The gas station has three closed OCP cases: 11/19/2001 –Case opened for compliance inspection and closure granted on 3/27/2002. No release or cleanup reported. 4/7/2004 –Case opened for surface spill from a motor/lube oil UST. Cleanup conducted and closure granted on 8/24/2004. 5/15/2009 –Case opened for well/groundwater contamination associated with motor/lube oil release. Cleanup conducted and closure granted on 11/17/2010. The station received an air violation that is listed in the ICIS database.	Low
8	Giant Food Store 19721 Frederick Rd Germantown, MD	620	OCP, UST – The grocery store located downgradient from the LOD had a 550-gallon diesel UST installed on 1/1/1989 and removed from ground on 1/27/1998. The OCP is in relation to the tank closure that was opened on 1/27/1998 and closed on 12/15/1998. Since there was no release reported, impacts are unlikely.	Low
9	Honey Pig Korean BBQ 19727 Frederick Rd Germantown, MD	640	FINDS/FRS – The restaurant is listed in the FINDS database, no violations noted.	Low
10	Fox Chapel Cleaners 19729 Frederick Rd Germantown, MD	640	RCRA SQG, FINDS/FRS, Drycleaners, FED Drycleaners – The dry cleaners located downgradient to the LOD are SQG for spent halogenated solvents. No violations were no noted.	Low

Street Address/Nearest Cross Streets	N. Frederick Road (MD 355), south of Game Preserve Road	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along on N. Frederick Road (MD 355) south of Game Preserve Road, in Gaithersburg, Maryland. The LOD is located in both northbound and southbound lanes and is surrounded by commercial to the south, east, and west, as well as forest to the north. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944. Based on review of the 1959 aerial the LOD and surrounding areas were residential with agricultural land. Residential and commercial development was observed on the 1981 aerial. The LOD and surrounding areas are similar to their current configuration by 1993. Eight environmental sites were identified in the immediate area of the LOD, six of which are in shopping centers that abut the LOD, including a former drycleaner approximately 80 feet upgradient of the LOD. A PIA request was submitted to MDE for additional information regarding the former drycleaner; however, based on MDE's response no additional information was available. A gas station, located approximately 220 feet upgradient, currently has an active 10,000-gallon and 15,000-gallon gasoline USTs installed in 2000. No release associated with USTs with the exception of a small surficial release approximately 1-gallon of gasoline in 2016; however, due the upgradient locations of the gas station and drycleaner to the LOD, impacts cannot be ruled. Further investigation may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

LOD ID: WAS-4047	Site Rank: Low	Figure Location: 
Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Along Clopper Road (MD 117), west of Longdraft Road	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along Clopper Road, west of Longdraft Road (MD 117), in Gaithersburg, Maryland. The LOD is surrounded primarily by residential development on small tracts of land. The St. Rose of Lima Catholic Church is located to the northwest. Based on review of historical aerial and topographic maps, Clopper Road was present by 1937, and the LOD and surrounding area were agricultural and residential in use up until 1963, when residential development began in the surrounding area. Residential development continued through 2005, when the surrounding area was observed to be developed in its current configuration. Four environmental database listings were identified in the immediate area of the LOD. An OCP case was opened in 2003 at the St Rose of Lima Church, approximately 320 feet to the northwest (crossgradient) of the LOD, for a heating tank closure. Impacted material was encountered during the closure of the UST, which was addressed and the case was closed in 2005. An OCP case was also opened in 2014 at the residential property for a UST closure, approximately 520 feet southwest (downgradient), and granted closure within days. The remaining two listings dealt with overfills of residential heating oil USTs and occurred 45 feet and 620 feet away respectively, from the LOD. In each case, the release was limited to 1 gallon of product and was cleaned up. Based on quantity of releases, distance to LOD, inferred hydraulic gradient, and/ or performance of cleanup activities, impacts to the LOD are unlikely.</p>

1	11604 Clopper Rd Gaithersburg, MD	45	SPILLS –An overfill of a heating oil tank resulted in the release of 1 gallon of heating oil on 4/22/2020 which was contained to concrete and cleaned up.	Low
2,3	St Rose of Lima Church 11701 Clopper Rd Gaithersburg, MD	320	OCP, UST – The church has one permanently out-of-use 550-gallon heating oil UST removed from ground on 12/5/2003. The OCP case for this tank closure was opened on 12/5/2003. A release and cleanup was reported. Closure was granted on 5/26/2005. Although the ERIS report lists this site as 45 feet from the LOD, it appears to be located approximately 320 feet northwest (crossgradient) from the LOD.	Low
3	Edmir Residence 17740 Garrett Dr Gaithersburg, MD	520	OCP– An OCP case was opened on 8/19/2014 for a residential heating oil tank closure. A release was reported and no further details were provided, but closure was granted on 8/22/2014. Based on the local topography, the site is believed to be downgradient of the LOD.	Low
4	17736 Garrett Dr Gaithersburg, MD	620	ERNS– A fuel delivery company overfilled a residential heating oil UST on 11/18/1991, resulting in the release of 1 gallon of heating oil. Material was wiped down from the side of the house; no soil removal was required. Based on the quantity of the release and distance from the LOD, impacts are unlikely. Based on the local topography, the site is believed to be downgradient of the LOD.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Clopper Road (MD 117), east of Pheasant Run Drive, in Gaithersburg, Maryland. The LOD is surrounded by commercial development. Based on review of historical aerial and topographic maps Clopper Road was present by 1937, and the LOD and surrounding area were agricultural and residential in use. Residential development in the surrounding area was observed in 1972 and commercial development in 1993. Development continued up until approximately 2005, when the surrounding area was observed to be developed in its current configuration. Nine environmental database listings were identified in the immediate area of the LOD. Six of the listings are associated with sites registered as RCRA-SQG and -LQG generators between 10 and 600 feet of the LOD. A property located directly north (upgradient) of the central portion of the LOD was listed in the CERCLIS database due TCE was found in the company’s on site well water dated 12/21/1983. A recovery system was installed at the site to address the chlorinated solvents in groundwater. According a groundwater sampling report from 1996, TCE was detected at 9.8 ug/l in a monitoring well in the southeast portion of the site, in the vicinity of a stormwater pond currently present. According MDE’s LRP website, the site received closure in 2012. Based on the available information provided by MDE, impacts to the LOD cannot be ruled out. Thus, further investigations are warranted to determine whether or not impacts are present within the boundaries of the LOD.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Clopper Road (MD 117), west of Quince Orchard Road (MD 124), in Gaithersburg, Maryland. The LOD is surrounded by residential development to the north and west, and commercial development to the south and east. The National Institute of Standards and Technology campus is located to the southeast. Based on review of historical aerial and topographic maps the Quince Orchard Road and Clopper Road were present by 1937. The LOD and surrounding area were agricultural and residential in use until commercial and residential development began in 1972, and the LOD and surrounding area are similar to current configuration by 1981. Twelve environmental database listings were identified in the immediate area of the LOD. A shopping center to the south of the LOD listed as a SHWS due to detected concentrations of VOCs in groundwater in the southwestern portion of the site. Based on available information provided my MDE through PIA request. Total VOCs ranged from 37 ug/l to 40 ug/l; however, impacts appear to be isolated to the southwestern portion of the site, as well as groundwater is flowing southeast to northwest, crossgradient of the LOD. A gas station is located south of the eastern portion of the LOD. Four groundwater monitoring wells were installed on site in 2003 that identified elevated levels of petroleum constituents present in subsurface materials (no free product). Several investigations were conducted to determine the extent of the impact area. Based on groundwater elevation gauging, groundwater at the site flow from south to north, towards the eastern portion of the LOD. Between August 2013 and September 2015, injections of magnesium sulfate in to select wells to decrease the concentration of petroleum constituents in the groundwater. In 2016, the maximum detected concentrations of benzene (379 ug/l), toluene (6.9 ug/l), ethylbenzene (126 ug/l), xylene (157 ug/l), and MTBE (901 ug/l) were recorded at the site. Based on the data and that the magnesium sulfate injections had substantially decreased the concentrations of petroleum constituents in the groundwater, locally. MDE granted closure to the site in July 2017. Based on the detected concentrations in the last round of sample, as well as that the gas station is hydraulically upgradient of the LOD, impacts to the LOD cannot be ruled out. Thus, further investigations are</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,15	861 Clopper Rd Gaithersbrug, MD	500	SPILLS – In 2014, a box of bottles with hydrochloric acid was found by a dumpster. No released material was identified. Montgomery Fire and Rescue handled correct disposal.	Low
2	Quince Orchard Plaza Shopping Center SW Corner Quince Orchard & Clopper	60	SHWS – This shopping center is located south of the LOD. Trace VOCs were detected in a water sample collected from a groundwater seep in a parking garage in the southern portion of the site, and approximately 800 feet south of the LOD. A site investigation was conducted in 1993 that included soil and groundwater sampling around a dry-cleaning facility in the southern portion of the site, as well around the Texaco gas station along the east-central boundary of the site. Based on analytical results, chlorinated solvents and other VOCs were identified in southwestern portion of the site ranging from 37 to 40 ug/l for total VOCs. Groundwater flow was inferred to flow to the northwest (crossgradient of the LOD). Detected concentrations of total VOCs in the groundwater sample collected from the monitoring well along the south-central boundary of the site of 40 ug/l suggest that the source of the contamination maybe from an offsite source. Based on the available data impacts at the site are believed to be at least 500 feet to the south, as well as crossgradient of the LOD.	Low
3	Orchard Pond Apts 893 Clopper Rd	160	OCP – An OCP case was opened in September 1993 and closed in April 1994 for an unknown reason. An OCP case was opened in January 1996 and closed two weeks later due to groundwater contamination. Based on a review of the surrounding area, the site is hydraulically disconnected from the LOD by a stream known as Long Draught Branch.	Low

Based on analytical results, chlorinated solvents and other VOCs were identified in southwestern portion of the site ranging from 37 to 40 ug/l for total VOCs. Groundwater flow was inferred to flow to the northwest (crossgradient of the LOD). Detected concentrations of total VOCs in the groundwater sample collected from the monitoring well along the south-central boundary of the site of 40 ug/l suggest that the source of the contamination maybe from an offsite source. Based on the available data impacts at the site are believed to be at least 450 feet to the east, as well as crossgradient of the LOD.</p>	Low
5	Staples 660 Quince Orchard, Gaithersburg, MD	185	<p>FINDS/FRS, RCRA VSQG – Believed to be crossgradient to the LOD. The office store is a VSQG for ignitable waste, corrosive waste, lead, and mercury. No violations were found.</p>	Low
6	National Bureau of Standards 601 Quince Orchard Gaithersburg, MD	370	<p>SHWS – Believed to be downgradient to the LOD. The SHWS case opened in 1986 from a complaint regarding improper chemical/ hazardous waste storage and management. In 1992, a PA was completed by US EPA that concluded that no substantial hazards were present and issued a NFRAP. MDE closed out the site in its LRP database in 2010. Based on available information provided by MDE, there is no evidence of environmental impacts on the site.</p>	Low

7	DRS Solutions/ Watkins Johnson Co 700 Quince Orchard Gaithersburg, MD	475	<p>SHWS, SEMS Archive, TRIS, CERCLIS, CERCLIS NFRAP, DSHW The Watkins Johnson Company was an manufacturing facility that produced electronic transmitters and receivers used in frequency scanning for military and commercial use. This facility has been in operation at this location since 1972. In 1990, the U.S. Environmental Protection Agency (EPA) targeted a number of large quantity generators for Preliminary Assessments (PA) to determine if past waste handling practices had resulted in releases of hazardous waste from those facilities. The Watkins Johnson Company was inspected under this environmental priorities initiative because it uses a variety of chemicals and generates hazardous wastes that are either treated on-site or shipped off-site to a permitted facility. MDE completed a PA of the site in September 1992. The PA indicated that there were no spills or violations of hazardous waste management practices reported at the facility. With no evidence of an existing or potential environmental hazard at the facility, the MDE/WAS recommended the site for “No Further Remedial Action Planned” (NFRAP) status, which was granted in 1992.</p> <p>HMIRS, ERNS - On 1/20/1993 a drum containing hydrazine hydrate fell over in transit, cracked, and spilled the contents. The area was isolated and decontaminated by hazmat specialists.</p> <p>FINDS/FRS, RCRA - The site is a minor air source and a SQG for several hazardous waste codes with multiple violations.</p> <p>UST - There are two permanently out-of-use USTs installed on 1/1/1076 and removed from ground on 1/31/1992: a 1,000 gallon hazardous substance UST and a 5,000-gallon gasoline UST.</p> <p>Based on the local topography, the site is crossgradient of the LOD.</p>	Low
8	MAGMA Cleaners 533 Quince Orchard Gaithersburg, MD	525	<p>FINDS/FRS, FED DryCleaners – Downgradient to the LOD. The dry cleaners is a permitted air source, no violations were noted.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Quince Orchard Road (MD 124), south of North Drive, in Gaithersburg, Maryland. The LOD is located in the westernmost travel lane of Quince Orchard Road and adjacent paved parking area. The LOD is surrounded by commercial development. The Montgomery College Drive Education building is located to the west and the National Institute of Standards and Technology campus is located to the east. Based on review of historical aerial and topographic maps the Quince Orchard Road was present by 1944. The LOD and surrounding area were agricultural and residential in use until commercial and residential development began in 1972 and the LOD and surrounding area are similar to current configuration by 1981. Six environmental database listings were identified in the immediate area of the LOD. Two SHWS sites located to the east and west of the LOD were identified in the database report, that include the National Bureau of Standards (east) and DRS Solutions/ Watkins Johnson Co (west). Based on available information provided by MDE both sites were identified as potential NPL sites in the 1980s by US EPA. The sites both went through the preliminary assessment (PA) process, which did not identify an evidence of an existing or potential environmental hazard at the facilities. Both sites received NFRAP determinations from US EPA and were eventually closed out of the MDE LRP database. Thus, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Quince Orchard Road (MD 124) and Raven Rock Drive, and west of Longdraft Road, in Gaithersburg, Maryland. The LOD is surrounded by residential development to the south, east, and west and the Quince Orchard Swim and Tennis Club to the north. Ridgeview Middle School is located to the northwest. Based on review of historical aerial and topographic maps Quince Orchard Road has been present since at least 1944. Residential and commercial development occurred by 1981. The pool complex directly north of the LOD had one 1,000-gallon and one 10,000-gallon diesel #2 USTs excavated and removed from the site between 1995 and 1996. The 1,000-gallon UST was initially excavated and removed from the site, after product was found along a stream to the north (downgradient) of the pool complex and LOD. Product was leaking through a cinder block wall that flowed into an interior drain that connected to a stormwater system. Once the UST was excavated, the product in the stream cleared up. No substantial issues were found with the 10,000-gallon diesel #2 UST that was excavated several months later. Based on the local topography, the former USTs and impacted stream are believed to be at least 225 feet downgradient of the LOD. Thus, impacts are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Great Seneca Highway (MD 119), northwest of Sioux Lane, in Gaithersburg, Maryland. The LOD includes the eastbound lane of Great Seneca Highway, adjacent sidewalk, and landscaped area. The LOD is surrounded by residential development with a power utility corridor to the north. Based on review of historical aerial and topographic maps, residential development in the surrounding area was observed in the 1972 and 1981 aerial photographs. Great Seneca Highway was present by 1993 and the LOD and surrounding area are similar to current configuration by 2005. No records of concern were identified in the vicinity of the LOD during the environmental review.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along Great Seneca Highway (MD 119), northwest of the intersection with Quince Orchard Road (MD 124), in Gaithersburg, Maryland. The LOD is surrounded by residential development to the north, east, and west and commercial development to the south. Based on review of historical aerial and topographic maps, the LOD and surrounding area were agricultural in use from 1937 through 1981. Great Seneca Highway was present by 1993, with observed residential and commercial growth. The LOD and surrounding area are similar to current configuration by 2005. One FINDS/FRS listing for a permitted restaurant was identified 190 feet upgradient of the LOD. No violations were identified during this review. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	South side of Clopper Road (MD 117), east of Liberty Mill Road	
City	Germantown	
County	Montgomery	
Type of property	Private	
Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Clopper Road (MD 117), east of Liberty Mill Road, in Germantown, Maryland. The LOD is located on private property as well as travel lanes for both roadways. The LOD is surrounded by undeveloped land to the west and south and commercial property to the east and north. Based on review of historical aerial and topographic maps, Germantown Road and Clopper Road have been present since 1944. A structure that appears to be a gas station is observed on the LOD between the 1970s and early 1990s. No further information was identified associated with this former property. The surrounding area was observed to be developed in its current configuration around 2005. Seven environmental database listings were identified in the immediate area of the LOD. That includes gas stations, a drycleaner, and a fire station. All the sites are believed to be crossgradient or downgradient of the LOD with the exception of a Exxon/Sunoco gas station approximately 130 feet north of the LOD. The site currently has four active 8,000 to 10,000 gallon gasoline and diesel USTs, and five permanently out-of-use USTs that were removed from ground. In 1998, one 10,000-gallon and two 8,000-gallon gasoline USTs were excavated and removed from the site. PID readings ranged from 400 to 1248 ppm. Approximately 400 tons of impacted soil was excavated and removed from the site. One 10,000-gallon and two 8,000-gallon gasoline USTs were installed in-place of the previous USTs. The case was closed in 2002. In 2011, a 1,000-gallon used oil UST was excavated and removed from the site. PID readings from the bottom of the excavation were 0.0 ppm. Two soil samples were collected and analyzed for TPH-DRO (329 mg/kg and 2,280 mg/kg)/GRO (1.17 mg/kg and 35 mg/kg) and VOCs including detections of TCE (12 ug/kg), naphthalene (1,020 ug/kg) and Xylenes (9.1 ug/kg). Based on the results for the confirmation sampling the case was closed approximately 2 months later. No groundwater sampling data for the site was identified during this review. Based on the lack of information on the former structure presumed to be a gas station from the 1960s to early 1990s, as well as gas station directly upgradient of the LOD with known residual soil impacts, impacts to the LOD cannot be</p>

The gas station is a permitted air source, and a SQG of ignitable waste and benzene. There are 10 permanently out-of-use USTs that were removed from ground. The following OCP listings were found:</p> <p>Case open on 7/16/1987. No further details were provided. Closure was granted on 2/1/1989.</p> <p>Case open on 2/16/1989. No further details were provided. Closure was granted on 9/21/1993.</p> <p>Case open on 7/3/1989. No further details were provided. Closure was granted on 9/1/1993.</p> <p>Case open on 1/28/1997 for tank closure. A release was reported, but cleanup was not reported. Closure was granted on 9/18/1997.</p> <p>Based on the.</p>	Low
3	Liberty Gas/ 13411 Kingsview Village Germantown, MD	415	<p>FINDS/FRS, UST, ICIS – Based on the local topography, this site is believed to be crossgradient of the LOD. The gas station is a permitted air source, and has two currently-in-use 20,000 gallon gasoline and diesel tanks, as well as two permanently out-of-use tanks that were removed from ground on 11/22/1995. Since there are no listings for the tank removal, and due to the distance to the LOD, additional information is needed.</p>	Low
4	Shell/118 & Germantown, MD Germantown, MD	475	<p>FINDS/FRS – Upgradient from LOD. The station is in the registered as a gasoline service station, without an exact address. This listing is misplotted. One of the other gas stations in the database listing must have previously been a Shell. See other IDs for details.</p>	Low
6	Germantown Fire Station 13402 Germantown Rd Germantown, MD	500	<p>UST, OCP – Upgradient from LOD. The fire station has one permanently out-of-use 3,000-gallon diesel UST that was removed from ground. An OCP case was opened on 6/21/2019 for the tank closure. No release was reported. Closure was granted on 3/10/2020.</p>	Low

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Germantown Road (MD 118), west of Crystal Rock Drive	
City	Germantown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along Germantown Road (MD 118), west of Crystal Rock Drive, in Germantown, Maryland. The LOD is surrounded by commercial development. Based on review of historical aerial and topographic maps, Germantown Road has been present since 1944. Development in the surrounding area began by 1993 and is similar to current configuration by 2005. Ten environmental database listings were identified in the immediate area of the LOD. Three gas stations located approximately 315 to 330 feet to the LOD. The Chevron gas station located approximately 330 feet east of the LOD currently has four 10,000-gallon gasoline and diesel USTs and three permanently out-of-use USTs that were removed from ground in November 1989. A subsurface investigation was conducted at the site after the removal of the USTs that identified elevated levels of petroleum constituents in the groundwater onsite; however, no free product was observed during the investigation. Five groundwater monitoring wells were installed during the initial investigation and were sampled quarterly which showed decreasing levels of the petroleum constituents over time. The monitoring wells also indicated that groundwater at the site was flowing southeast to northwest, towards the eastern portion of the LOD. In 1993, MDE granted no further action to the site and case was closed. Based on the analytical results from the last round of sampling conducted in the fourth quarter of 1992, benzene was non-detect and total BTEX was 366 ug/l in the monitoring nearest the LOD. Since no other sampling has been conducted since then, it is possible that petroleum constituents have migrated into or near the eastern portion of the LOD. Further investigation may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Germantown Road (MD 118), east of Middlebrook Road, in Germantown, Maryland. The LOD is surrounded by commercial development. Based on review of historical aerial and topographic maps, Germantown Road has been present since 1944. Development in the surrounding area began by 1993 and is similar to current configuration by 2005. Six environmental database listings were identified in the immediate area of the LOD including a Sunoco gas station approximately 125 feet to the north. Based on available information on the Sunoco gas station to the north is, the facility was constructed in 2001 and is believed to be crossgradient of the LOD. There are no reported releases associated with the USTs onsite. The remaining five listings either have no releases, or based on distance and/or hydraulic gradient to the LOD. Thus, impacts to the LOD are unlikely.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Verizon/ 19420 Germantown Rd Germantown, MD	170	RCRA NonGen, FINDS/FRS –No violations were identified during this review.	Low
2	Truck Spill/ 12907 Wisteria Dr Germantown, MD	280	OCP, FINDS/FRS – A vehicle accident caused an OCP case to open on 12/5/2003. A release and cleanup was reported. Closure was granted on 5/14/2004. Based on the local topography, the site is crossgradient to the LOD.	Low
3	Shopping Center 12933 Wisteria Dr Germantown, MD	315	VCP, LUC, SHWS – Detected concentrations of chlorinated solvents associated with a drycleaner in east-central portion of the site were identified in groundwater samples collected. No details are provided on the listings for this shopping center. Based on available groundwater data, groundwater flows south to north (downgradient) of the LOD. The site entered into the MDE VCP in 2003 and received a NFRD shortly thereafter that instituted soil and groundwater uses on the property. Based on available information, the impacted area is believed to be approximately 350 feet north (downgradient) of the LOD.	Low
4	Copy Center 12810 Wisteria Dr Germantown, MD	320	RCRA SQG, FINDS/FRS –The site is a SQG for ignitable waste. No violations were found. Based on the local topography, the site is downgradient to the LOD.	Low
5	Shell/ 12901 Wisteria Dr Germantown, MD	365	<p>FINDS/FRS, ICIS, RCRA NonGen –The gas station is a permitted air source and is listed as a RCRA-Non Generator.</p> <p>OCP, UST – The facility has one permanently out-of-use 550-gallon gasohol UST removed from ground on 2/5/1997 and three currently-in-use 10,000 gallon gasohol USTs installed on 1/1/1988.</p> <p>1997 – A 550-gallon waste oil UST was excavated and removed from the site. The soil in the excavation was observed to have a strong petroleum odor. Thus, the area was over-excavated and an unknown amount of soil was disposed of offsite. Soil samples were collected from the excavation and analyzed for TPH-DRO (130 mg/kg), TPH-GRO (120 mg/kg), benzene (ND), toluene (ND), ethylbenzene (ND), xylenes (4 ug/kg), and naphthalene (ND). Based on the analytical results, the case was closed shortly thereafter.</p> <p>2000 – A OCP case was opened in for a compliance inspections that identified several deficiencies. No release was reported. The issues were corrected and the case was closed in 2001.</p> <p>2003 – Four monitoring wells were installed at the site groundwater was sampled for quarterly three times. Based on groundwater elevation gauging. Groundwater is flowing to the north/northwest, away from the LOD. No free product was observed any of the monitoring wells. Low</p>	Low

Street Address/Nearest Cross Streets	North side of Germantown Road (MD 118), west of Waters Road	
City	Germantown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Germantown Road (MD 118), west of Waters Road, in Germantown, Maryland. The LOD is surrounded by commercial to the north, south, and east and the forested area around the railroad to the west. Based on review of historical aerial and topographic maps, Germantown Road has been present since 1944.</p> <p>Development in the surrounding area began by 1993 and is similar to current configuration by 2005. Nine environmental database listings were identified in the immediate area of the LOD. A site located directly north (upgradient) of the LOD was previously utilized as a towing company that impacted soil and groundwater over time due to illicit releases, poor housekeeping practices, and releases from USTs and ASTs. As part of the redevelopment of the site in mid-2010s, all USTs were excavated and removed and a site wide subsurface investigation was conducted that resulted in the excavation and removal of over 13,694 tons of impacted soil that was disposed of offsite. Based on available groundwater sampling data, samples were collected from seven monitoring wells onsite and analyzed for VOCs and petroleum constituents, which were all non-detect or below MDE action levels with the exception of the TPH-DRO that ranged between 0.12 ug/l and 0.29 ug/l that exceeded its action level of 0.047 ug/l and tetrachloroethane at 6.4 ug/l that exceeded its corresponding action levels of the 5 ug/l. Groundwater is believed to be between 25 and 44 feet bgs and flows south/southwest towards the LOD. Since the site is upgradient of the LOD, impacts to the LOD cannot be ruled out. Thus, further investigation may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Watershed:	WAS	
Street Address/Nearest Cross Streets	Along I-370, west of Frederick Road (MD 355) underpass	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in the central median of I-370, west of the Frederick Road (MD 355) underpass, in Gaithersburg, Maryland. The surrounding area is a mix of commercial and residential developments to the south and residential developments among forested land to the north. Commercial and residential development began prior to 1971, and is observed in its current configuration by 2005. Three OCP cases are located between 270 feet and 455 feet from the LOD. The most concerning of which, the All State Leasing Co. located 270 feet in an apparent hydraulically upgradient direction, has documented groundwater impacts present. In March 1994, a 15,000-gallon gasoline UST was excavated and removed. PID readings up to 2,100 ppm were identified directly beneath the former UST. A monitoring well installed adjacent to the former UST exhibited a total BTEX concentration of 17,600 ug/L, well above the MDE Groundwater Standards. MDE closed the OCP case in 1999 based on the justification that the surrounding area is connected to public water. As this facility appears hydraulically upgradient of the LOD, further investigation is warranted to determine whether or not impacts from this site has impacted environmental media within the LOD. The remaining records of concern are not anticipated to have an impact on the LOD due to either their distance, hydraulic direction, or case status.</p>

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	South side of Shady Grove Road, east of Oakmont Avenue	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Shady Grove Road, east of Oakmont Drive, in Gaithersburg, Maryland. The surrounding area is composed primarily of commercial developments. The surrounding area was primarily agricultural and vacant land up until 1981, when commercial development began to occur. Commercial development continued through 2013, when the surrounding area was observed to developed in its current configuration. There are several sites of concern in the vicinity of the LOD. A post office, located 60 feet downgradient from the LOD, has multiple records of concern, including SPILLS, ERNS, an OCP case, USTs and the site is a RCRA facility. Based on a review of available data, residual petroleum impacts are believed to be present around the vehicle maintenance facility on the western side of the property, approximately 245 feet south (downgradient) of the LOD. Additionally, there is a former VCP site, former Sears warehouse, located approximately 270 feet southwest of the LOD. A phase II was conducted in 1997 that identified an area of elevated TPH-DRO in groundwater approximately 500 feet southwest of the LOD. The site is currently utilized as a car dealership. Based on the local topography groundwater is believed to flow towards the south; therefore, both areas of concern are believed to be downgradient of the LOD. Thus, impacts are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	MP-BA20.0 CSX mile post Shady Grove Road at Oakmont	480	SPILLS – In 2014, a freight train struck a trespasser. No spill occurred. Although the incident is listed as 40 feet from the LOD, the train tracks are approximately 480 feet from the LOD.	Low
2	US Post Service/ 16501 Shady Grove Road Gaithersburg, MD	60	<p>RCRA CESQ, RCRA NON GEN – No violation records associated with this facility were identified during this review.</p> <p>ERNS, SPILLS – In 2017, a tractor trailer backed into a mail truck resulting in the puncture of one of the 50 gallon saddle tanks. Diesel was discharge to the ground and the storm drain. The spill was contained according to the database report.</p> <p>UST, OCP – There are currently five USTs in use at the facility, ranging in size from 1,000 to 12,000 gallons in size. An additional five USTs previously operated at the size but are now permanently out of use and have since been removed from the ground.</p> <p>1993 – Two 12,000-gallon diesel USTs were excavated and replaced with two new USTs due to operational problems.</p> <p>1995 – Three 550-gallon petroleum USTs (motor oil, transmission oil, and used oil) were excavated and replaced with three 1,000-gallon USTs. Soil samples were collected that indicated that impacts were isolated to the area around the product lines. Approximately 10 tons was excavated from the area.</p> <p>1999 – Free product was observed in the monitoring wells around the tank pit area. Based on aerial photographs, the UST tank field is approximately 245 feet to the southwest (downgradient) of the LOD. Approximately 11.5 gallons of free product was recovered using an extraction system. The wells were monitored for free product for several years.</p> <p>2000 – A diesel product line failed, which as repaired. Soil samples were collected that indicated that impacts were isolated to the area around the product lines. Approximately 10 tons was excavated from the area.</p> <p>2007 – Eight in-ground hydraulic lifts were excavated and removed the vehicle maintenance facility at the site. Elevated levels of petroleum constituents were identified in subsurface soil, but were attributed to previous releases documented at the site.</p> <p>Based on the local topography, the postal facility is believed to be downgradient of the LOD. The impacted area is believed to be located around the vehicle maintenance facility on the western side of the site, approximately 245 feet south of the LOD.</p>	Low

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
3	Sears/ 16401 Shady Grove Road Gaithersburg, MD	270	<p>UST, OCP – Previously seven USTs operated at this facility, ranging in size from 1,000 to 15,000 gallons. The tanks held diesel, heating oil and gasoline. All tanks are permanently out of use and have since been removed from the ground.</p> <p>1986 - An OCP case was opened due to a UST failing a tightness test; however, it was found that there was an air pocket in a product line and no release had occurred. The Case was closed approximately a month and a half later.</p> <p>2001 – A 15,000-gallon heating oil UST was excavated and removed from the site. Soils in the excavation were screened with a PID that did not identify any exceedances above background levels. The case was closed approximately 1 month later.</p> <p>RCRA CESQG – There are no violation records associated with this facility.</p> <p>SHWS, VCP – According to available information, the site was utilized for warehousing of merchandise, vehicle and small appliance maintenance, fuel service, battery recharging and equipment retail. In 1986, fuel service ceased with the removal of four underground gasoline/ diesel storage tanks. Small quantities of waste oil, battery electrolyte fluid, and waste solvents (e.g. antifreeze) are generated by site operations. Operations at the site are not expected to change in the future. Environmental investigations 1997, identified an exceedance of TPH-DRO in groundwater (350 mg/l), which exceed the MDE action level at the time of 100 mg/l in the southwestern portion of the site. In 1998, the property owner submitted an application to MDE VCP; however, the application was withdrawn by the owner in 2000. The warehouse has been demolished and is utilized as a car dealership.</p> <p>Based on the local topography, groundwater at the site is believed to flow towards the south (downgradient), away from the LOD.</p>	Low
4	Standard Properties 8531 Grovemont Ct Gaithersburg, MD	455	<p>OCP – In 1990, an OCP case was opened for the removal of two 3,000-gallon and two 5,000-gallon heating oil USTs from site. No impacted soil or odors were identified in the soil from the excavation. The MDE inspector onsite gave permission for the excavation to be backfilled, and the case was closed. It is unknown whether a release occurred. The case was closed within two years. Based on local topography the site is believed to be located upgradient/crossgradient from the LOD.</p>	Low

Ranking Rationale Site Summary <p>The LOD is located along the east side S Frederick Avenue (MD 355), south of Central Avenue in Gaithersburg, Maryland. The surrounding area is primarily commercial and residential properties. Commercial and residential development is observed to begin prior to 1959. The surrounding area is observed to be in its current configuration by 2005. An inactive dry cleaner is believed to be located approximately 385 feet upgradient from the LOD; however, there are no documented spills or contamination associated with the facility. Based on distance from the LOD and absence of reported releases, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	West side of S Frederick Avenue (MD 355), northwest of West Deer Park Road	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of S Frederick Avenue (MD 355), northwest of W Deer Park Road, in Gaithersburg, Maryland. The surrounding area is a mix of commercial and residential developments. The surrounding area was primarily forested and agricultural land up until 1963, when residential and commercial development began to occur. Residential and commercial development continue up until 2018 when the surrounding area was observed to be developed in its current configuration. Although there are several records of concern in area surrounding the LOD, most do not involve releases or contamination or are located over 500 feet from the LOD and are of low concern. One site was listed approximately 50 feet north (upgradient) of the LOD, that had four petroleum USTs ranging in size from 550-gallons to 5,000-gallons excavated and removed from the property in 1991 and 2000 was determined to be more than 700 feet west of the LOD. No releases or impacted soil was reported during the removals. Thus, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	SHFP Activities Center 506 S Frederick Ave Gaithersburg, MD	600	ALT FUELS – open electric charging station FINDS/FRS, RCRA SQG – There are no violation records associated with this facility. Although the site is listed as 40 feet from the LOD, the actual site measures over 700 feet west from the LOD.	Low
2	Landmark Reality Inc 521 S Frederick Ave Gaithersburg, MD	45	FINDS/FRS, ICIS – Enforcement activity, no records of that incident resulted in a release to the environment.	Low
3	531 S Frederick Ave Gaithersburg, MD	45	FINDS/FRS – Minor air permit, no violations were identified during this review.	Low
4	Hospice/Summit Farm Park/ City of Gaithersburg/ Recreation Dept 502 S Frederick Ave Gaithersburg, MD	50	UST,OCP – There are four USTs permanently out of use at the site. The tanks ranged in size from 550 to 5,000 gallons in size and held heating oil, diesel, and unknown substances. All tanks have been removed from the ground. 1991 – A 1,000-gallon diesel, 2,000-gallon heating oil, and 5,000-gallon heating oil UST were excavated and removed from the site. The USTs were found to be in good condition and no odors or impacted soil was observed in the excavation. The MDE inspector onsite instructed the contractor to backfill the excavation and the case was closed in 1993. 2000 – A 550-gallon heating oil UST was excavated and removed from the site. There are no records from the removal; however, MDE decided to close the site in 2006 Based on further review, this site is believed at least 700 feet west of the LOD.	Low
5	517 S Frederick Ave Gaithersburg, MD	65	FINDS/FRS – Minor air permit, no violations were identified during this review.	Low
6	Gaithersburg Apartments 501-B S Frederick Ave Gaithersburg, MD	150	FINDS/FRS – Apartment operators permit, no violations were identified during this review.	Low
7	Gaither House 501 B3 S Frederick Ave Gaithersburg, MD	155	FINDS/FRS, ICIS – NPDES Permit, no violations were identified during this review.	Low
8	SHFW Water Park 510 S Frederick Ave Gaithersburg, MD	1000+	RCRA SQG – There are no compliance violations associated with this facility. FINDS/FRS – NPDES Permit, no violations were identified during this review. Although the site is listed as 230 feet from the LOD, it measures over 1,000 feet from the LOD.	Low

Watershed:	WAS	
Street Address/Nearest Cross Streets	Along Pennsylvania Avenue interchange with Forestville Road	
City	District Heights	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the Pennsylvania Avenue (MD 4) interchange with Forestville Road in District Heights, Maryland. The surrounding area is primarily mixed used commercial/residential. Based on a review of historical imagery, the surrounding area was agricultural in the 1930s with increased residential development to the west-northwest in the 1950s. Commercial development occurred in the 1970s through 1990s. The LOD and surrounding area were observed in its current configuration by the mid-1990s. Eleven facilities listed on one or more environmental database were identified in the surrounding area. The closest of these, located on an adjacent property 90 feet to the north, has two USTs and an open OCP case. Based on a review of MDE files obtained via a PIA request, the case was opened during installation of two new tanks at the site and required testing and submittal of the appropriate documentation before the site could be placed into service. There were no records of releases at the site, therefore, impacts to the LOD are unlikely. The remaining incidents, occurring at distances of between 205 and 605 feet from the LOD, either did not involved a release or were located hydraulically cross- or downgradient from the LOD. Thus, impacts to the LOD from these incidents are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	ROYAL FARMS #287 / 3300 FORESTVILLE RD DISTRICT HEIGHTS, MD	90	OCP, UST – Two 30,000-gallon USTs containing gasoline and diesel fuel are registered to the site. OCP Case 20-0027PG was opened July 15, 2019 and remains open. Based on a review of MDE files obtained via a PIA request, the case was opened during observation of the installation of the 2 new 30,000-gallon USTs. The MDE required submittal of the appropriate documentation and performance of testing prior to the site being placed into service. Tightness testing records from December 2019 showed passing results. There were no records of releases at the site in the records provided by the MDE, therefore, impacts to the LOD are unlikely.	Low
2	ROADWAY 3300 MARLO PL DISTRICT HEIGHTS, MD	205	SPILLS – A spill of diesel fuel was reported in December 2017 following a vehicle accident. The fire department responded to clean-up the spill immediately; thus, impacts to the LOD are considered to be unlikely.	Low
3	OATES TRUCKING RT 4 & FORESTVILLE RD FORESTVILLE, MD	255	OCP – OCP Case No. 05-0009PG1 was opened and closed in July 2004 following a vehicle accident. The release was cleanup immediately and impacts to the LOD are unlikely.	Low
4	MD STATE POLICE- FORESTVILLE FORESTVILLE, MD	305	FINDS/FRS, ICIS, OCP, RCRA-SQG, SPILLS, UST – The site is a small quantity generator of ignitable waste and benzene; no violations are reported. One 550-gallon used oil UST and one 6,000-gallon gasoline UST were excavated and removed from the ground in 1997; one 12,000-gallon gasohol UST remains in-use. OCP Case No. 97-1972PG1 was opened in April 1997 in connection with a motor/lube oil tank closure. A release and cleanup were reported and the case was closed in October 1997. OCP Case No. 06-0674PG1 was opened in February 2006 and a release and cleanup were reported. The case was closed in August 2006. A spill of approximately 5-10 gallons of gasoline was reported in May 2018 as a result of failed transfer operations. Based on a review of MDE files obtained via a PIA request, there have been no substantial releases at the site. In addition, based on local topography, the site appears to be crossgradient from the LOD. Thus, impacts to the LOD are unlikely.	Low
5	YOUR LIVING ROOM FURNITURE CO. 3310 FORESTVILLE ROAD FORESTVILLE, MD	365	OCP, UST – One 6,000-gallon UST containing heating oil was excavated and removed from the ground in August 1987. OCP Case No. 98-0341PG1 was opened in August 1987 and closed in October 1987, which states no release occurred; thus, impacts to the LOD are unlikely.	Low
6	PARAMOUNT PEST CONTROL 7716 MARLBORO PIKE FORESTVILLE, MD	410	OCP – OCP Case No. 94-2720PG1 was opened in April 1994 and closed in May 1994. Additional information is not provided; however, based on local topography, the site appears to be crossgradient from the LOD and thus, impacts to the LOD are unlikely.	Low

Project Area Site Descriptions

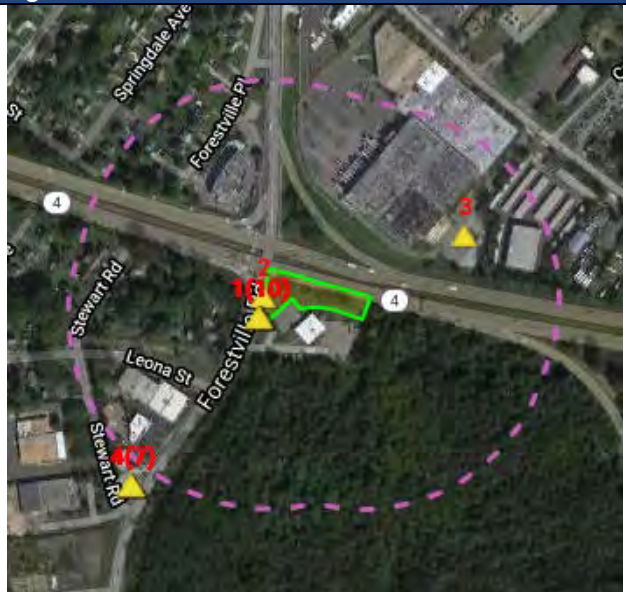

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
7	7706 MARBORO PIKE FORESTVILLE, MD	440	SPILLS – A spill of sewage was reported in April 2014 when a manhole and piping at a shopping center overflowed. The spill was cleaned up immediately and impacts to the LOD are unlikely.	Low
8	EXXON 7631 MARLBORO PIKE FORESTVILLE, MD	470	FINDS/FRS, ICIS, OCP, RCRA-CESQG, SHWS, SPILLS, UST – One 1,000-gallon used oil UST was excavated and removed from the ground in January 1981; two 8,000-gallon USTs and two 12,000-gallon USTs remain in-use at the active gas station. One OCP case associated with the site was opened and closed in 1993 and a second was opened in 1990 and closed in 1993; no release was reported for these cases. A third OCP case was opened in March 2009 when contamination was found in monitoring well; the case involved cleanup activities and was closed in July 2012. There were several small spills (<5 gallons) associated with fueling operations and vehicle spills, all of which were cleaned up at the time of reporting. Based on local topography, the site appears to be crossgradient from the LOD and thus, impacts to the LOD are unlikely.	Low
9	7715 MALBORO PIKE FORESTVILLE, MD	580	ERNS – A caller reported chemicals leaking from a truck in March 1996. Impacts are unknown; however, based on local topography, the site appears to be downgradient from the LOD and combined with distance from the LOD, impacts to the LOD are unlikely.	Low
10	MARLO FURNITURE 7801 MARLBORO PIKE FORESTVILLE, MD	600	OCP, UST – Two 10,000-gallon heating oil USTs were excavated and removed from the ground in November 1997. One OCP case was open in February 1994 and closed one month later in March 1994; no other details were reported. A second OCP case was opened in November 1997 and closed in November 1998. A release and cleanup activities were reported. Based on local topography, the site appears to be downgradient from the LOD and combined with the distance from the LOD, impacts to the LOD are unlikely.	Low
11	A& A TOWING 7820 MARLBORO PIKE FORESTVILLE, MD	605	OCP, UST – Two 10,000-gallon USTs containing gasoline and diesel fuel were excavated and removed from the ground in June 1995. OCP Case No. 95-2495PG1 was opened and closed in 1995; no other details were provided. Based on local topography, the site appears to be downgradient from the LOD and combined with the distance from the LOD, impacts to the LOD are unlikely.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Pennsylvania Avenue (MD 4), immediately east of Forestville Road, in District Heights, Maryland. The surrounding area is primarily mixed used commercial/residential. Based on a review of historical imagery, the surrounding area was agricultural in the 1930s with increased residential development to the west-northwest in the 1950s. Commercial development occurred in the 1970s through 1990s. The LOD and surrounding area were observed in their current configuration by the mid-1990s. The adjacent property to the south, MD State Police, previously had a 550-gallon used oil UST and a 6,000-gallon gasoline UST removed in 1997 and current has one the 12,000-gallon gasoline UST. Review of files provided by MDE through a PIA request determined there have been no substantial releases at the site. An OCP case associated with a motor vehicle accident occurred near the intersection of Pennsylvania Avenue and Forestville Road. The release volume was not listed; however, any release would have been surficial in nature, and was reportedly cleaned up by the local fire department. The remaining records of concern were listed at a distance of 445 feet or greater. Based on case statuses or distances, impacts to the LOD are unlikely.</p>

Watershed:	WAS	
Street Address/Nearest Cross Streets	Pennsylvania Avenue, northwest of Walters Lane	
City	District Heights	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Pennsylvania Avenue (MD 4), immediately west of Walters Lane, in District Heights, Maryland. The surrounding area is predominantly residential and commercial properties. Construction of Pennsylvania Avenue, as well as residential development in the surrounding area, began in the late 1950s. Commercial development began in the 1970s, and the surrounding area appeared in their current configuration by 2005. Six facilities in the surrounding area were listed on one or more environmental database. The most concerning of these is a gas station located 55 feet southeast from the LOD. This gas station has multiple closed and active USTs, OCP cases, and has a history of environmental impacts. Review of MDE files indicated that remediation activities were conducted for the OCP cases and they were all closed to MDE's satisfaction. However, there are several spill reports, including for tightness testing failures, for which there was no additional information in the files. Based on the proximity of this facility to the LOD and lack of information on certain incidents, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	BP Amoco 3232 Walters Lane, Suitland, MD	55	<p>FINDS/FRS, ICIS – violations for expired Clean Water Act Permit since 2017.</p> <p>RCRA-SQG – Small quantity generator of ignitable waste and benzene, no violations reported.</p> <p>UST, OCP – The site is registered with two 10,000-gallon gasohol USTs installed 11/1/1982, currently in use; one 10,000-gallon diesel UST installed 11/1/1982, currently in use; one 550-gallon used oil UST installed on 11/1/1982, permanently out of use and removed from the ground on 5/8/2002; and one 550-gallon heating oil UST installed on 11/1/1982, permanently out of use and removed from the ground on 5/8/2002. OCP case No. 02-1424PG1 was opened on 5/8/2002 and closed on 11/7/2002. A release and cleanup were reported for the tank closures. Based on a review of MDE files obtained through a PIA request, the two tanks were emptied of their contents, cleaned and excavated. Perforations were observed in both tanks and a small amount of liquid was observed to be leaking from one tank. Impacted soils were excavated (56.5 tons) and removed for off-site disposal. The tanks were disposed off-site, while the oil-water separator was closed in place. Post-excavation soil sampling was conducted beneath the tanks for BTEX, MTBE, naphthalene, TPH-DRO and TPH-GRP analyses. The samples collected near the used oil UST were also sampled for TCLP metals at MDE's request. The analytical results indicated that BTEX and MTBE concentrations were below detection limits in all samples; naphthalene was detected in one of six samples at 5.2 ppm; TPH-GRO was detected in one sample at 2.5 ppm; TPG-DRO concentrations ranged from 19.4 to 216.0 ppm; and there were no TCLP metals concentrations above the lab detection limits. MDE approved the closure of the tanks and in a letter dated November 7, 2002, stated that no further corrective action was required.</p> <p>OCP – Case No. 94-0470PG1 was opened on 8/11/1993 for retrofit/repair with a release reported. It is unknown if a cleanup occurred, however, the case was closed on 1/10/1995. Based on a review of MDE records, an assessment of the site was initiated in December 1991 by Amoco near the termination of the existing lease and in consideration of property divestment. Soil and groundwater sampling was conducted to assess the presence and extent, if any, of petroleum hydrocarbons beneath the site. Analytical results for the soil samples indicated that BTEX concentrations were non-detectable and TPH concentrations ranged from non-detectable to 42.4 µg/g, while BTEX, MTBE, naphthalene and TPH were all below</p>	Moderate

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	BP Amoco 3232 Walters Lane, Suitland, MD (Cont.)	55	<p>quantitation limits in groundwater. No liquid phase hydrocarbons were present in the monitoring wells. Depth to groundwater was approximately 32 feet below grade and groundwater flow direction was to the south. Minimal risk from the site was identified. On August 11, 1993, soil samples were collected at the Stage II equipment trenches at the site for BTEX and TPH analyses. A composite sample was also collected from stockpiled soil for waste characterization analyses. Analytical results indicated concentrations of BTEX ranging from 2 µg/kg for each constituent to 407,000 µg/kg in the composite sample; and TPH concentrations ranging from 120 µg/kg in the grab samples to 3,300,00 µg/kg in the composite sample. Groundwater sampling was then conducted and indicated the presence of petroleum hydrocarbons in the three monitoring wells. Approximately 3.4 tons of contaminated soil were removed for off-site disposal in February 1994. The soils were generated during the Stage II vapor recovery installation. In August 1994, Amoco requested closure of the case due to the decreased concentrations of BTEX in the wells. In a letter dated January 27, 1995, the MDE closed the case (94-0470 PG1) and stated that no further corrective action is required.</p> <p>Case No. 95-1880PG1 was opened on 2/21/1995 for a motor/lube oil test failure and closed on 7/24/1996. Based on a review of MDE records, a 10,000-gallon gasoline tank failed a test for Stage 2 upgrade, but there was no leak or threat of leak. While on site for the tank test failure, the MDE representative observed stockpiled soil, which was included in the spill case. It appears that this soil was related to the ongoing case No. 94-0470 PG1, which was eventually closed on January 27, 1995. Case No. 95-1880PG1 was closed in July 1996 and no further corrective active is required.</p> <p>Case No. 11-0390PG was opened on 1/11/2011 for a test failure with a reported release and cleanup and closed on 2/2/2011. Based on a review of MDE records, the pump connector which failed was located within a containment sump and the piping was double-walled. Nearby monitoring wells were gauged and did not contain free product. Sumps were dry. Connector was replaced and the line retested.</p> <p>Case No. 04-1304PG was opened on 1/23/2004 for well/groundwater contamination and closed on 4/10/2007. Cleanup activities are reported. Based on a review of MDE records, there was a release of 500-600 gallons of gasoline from a UST in January 2004. Approximately 549 gallons of free product were recovered by vacuum over the next 2</p>	Moderate

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	BP Amoco 3232 Walters Lane, Suitland, MD (Cont.)	55	<p>days in an emergency response. Surfactant injections and High Vacuum Extraction and Treatment (HEAT) were also performed as part of the emergency response for a total removal of 861 gallons of free product and 3,637 gallons of water from the UST field. Soil and groundwater investigations were subsequently conducted at the site. In soil samples collected in February 2004, BTEX concentrations were non-detect; MTBE concentrations ranged from 0.0019 to 0.0024 mg/kg; TPH-GRO concentrations were non-detect and TPH-DRO concentrations ranged from non-detect to 19.4 mg/kg. In groundwater samples collected in February 2004, BTEX was detected at 0.00067 mg/L in one well; MTBE concentrations ranged from 0.013 to 1.55 mg/L; TPH-DRO was 1.67 mg/L in one well; and TPH-GRO was not detected in any wells. One well was not sampled due to the presence of free product. Based on the results, MDE recommended monthly gauging and quarterly sampling of the wells. Free product found in any well was to be bailed, and was eventually addressed by an absorbent sock. During a closure visit in 2007, MDE gauged the wells and found no free product or odors. In a letter dated April 30, 2007, MDE closed the case and required no further action.</p> <p>The MDE files also contained a spill report dated June 21, 2017 for a secondary containment failure of tank 1 regular STP sump due to a leak at the seam, and UDC failures of all 4 dispenser sumps due to leaks at the product line boots. There was no indication of a release prior to the test. There was a spill report dated December 6, 2017 for failure of line tightness tests; no release was reported. There was also a spill report dated May 5, 2020 for failure of a diesel line tightness test; no release was reported. Based on the absence of any additional info regarding these spill reports and the proximity of this gas station to the LOD, there is a potential for impacts to the LOD.</p>	Moderate
2	Amberwood Apartments 3225 Walters Lane, Forestville, MD	70	OCP – A case was opened on 8/22/1995 for a commercial heating oil tank closure and closed on 9/18/1995.	Low
3	Cambridge Commons 3253 Walters Lane, Forestville, MD	105	<p>FINDS/FRS, ICIS – violations for expired Clean Water Act Permit since 2017.</p> <p>UST – The site is registered with two 10,000-gallon heating oil USTs installed on 11/1/1975, permanently out of use and removed from the ground on 8/22/1995 and 8/23/1995.</p>	Low

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
4	Koretizing Cleaners 3320 Walters Lane, Forestville, MD	280	FINDS/FRS, ICIS, RCRA SQG, FED Drycleaners, Drycleaners – Based on available information, the property is an inactive dry cleaner and was a small quantity generator with an ICIS notice of violation but with no RCRA violations reported. A PIA request to MDE did not return any files for the site. Based on the absence of documented releases at the site, impacts to the LOD appear unlikely.	Low
5	Amberwood Apartments 3339 Walters Lane, Forestville, MD	350	FINDS/FRS – minor air permit, no violations reported OCP – A case was opened on 8/22/1995 for a commercial heating oil tank closure and closed on 9/18/1995.	Low
6	Penn Forest Shopping Center 3300 Walters Lane, District Heights, MD	360	LUC, VCP, SHWS – In 2002, Phase I and Phase II ESAs were completed which identified VOCs in soil and groundwater, likely as a result of the dry cleaning operations located within the strip mall. A sub-slab venting system was installed in 2005 and Certification of Compliance issued on September 2007. No Further Requirements Determination (NFRD) was issued in March 2014; site use appears to be restricted to commercial or industrial only; a vapor barrier is required. Off-site investigation and remediation activities were conducted under the direction of the State Superfund Program. A PIA request to MDE did not return any files for the site; however, based on the issuance of an NFRD without the requirement for any continued groundwater remediation or long-term monitoring, impacts to the LOD are unlikely.	Low

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Pennsylvania Avenue (MD 4), immediately west of Walters Lane, in District Heights, Maryland. The surrounding area is predominantly residential and commercial properties. Construction of Pennsylvania Avenue, as well as residential development in the surrounding area, began in the late 1950s. Commercial development began in the 1970s, and the surrounding area appeared in their current configuration by 2005. Seven facilities in the surrounding area were listed on one or more environmental database. The most concerning of these is a gas station located 280 feet southeast from the LOD. This gas station has multiple closed and active USTs, OCP cases, and has a history of environmental impacts. Review of MDE files indicated that remediation activities were conducted for the OCP cases and they were all closed to MDE's satisfaction. However, there are several spill reports, including for tightness testing failures, for which there was no additional information in the files. Although this facility has a history of impacts, and information on certain incidents were not available, this site appears to be located downgradient of the LOD. Based on the distance and hydraulic direction, impacts to the LOD from this gas station are unlikely. The remaining listed facilities were located at distances of between 300 and 590 feet, in a cross- or downgradient direction. Thus, impacts to the LOD from these facilities are unlikely.</p>

Street Address/Nearest Cross Streets	Walker Mill Road and Hazelwood Drive	
City	Capitol Heights / District Heights / Forestville	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Walker Mill Road, immediately east of Hazelwood Drive, in Capitol Heights, Maryland. The surrounding area is predominantly residential and commercial properties, with some light industrial properties to the northeast. Walker Mill Road was observed as early as 1937 but was later widened and in its current configuration by the early 1970s. Residential development began in the 1950s to 1970s and commercial development began in the 1970s. The LOD and surrounding area appeared in their current configuration by 2018. Several closed OCP cases were noted within the vicinity of the LOD; however, one of these closed OCP cases abuts the LOD to the north, while the others are located on properties hydraulically downgradient from the LOD. A dry cleaner was identified south of the LOD with historical PCE impacts in groundwater. Given the drycleaner is located hydraulically downgradient from the LOD, impacts to the LOD from this drycleaner is unlikely. A PIA request was submitted to MDE for the OCP site abutting the LOD to the north; however, MDE responded stating no files were available. Due to the limited information on this OCP case, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Walker Mill Investments 6400 Walker Mill Road, Capitol Heights, MD	13	OCP – A case was opened on 1/12/1989 for unspecified purposes. The case is listed as closed; however, no closure date is provided. A PIA request to MDE did not return any files for the site, therefore, it is not possible to rule out the potential for impacts to the LOD.	Moderate
2	County Dry Cleaners 1114 County Road, District Heights, MD	176	FED Drycleaners – Facility ID 110038955636 FINDS/FRS, ICIS –minor air permit permanently closed as of 2005.	Low
3	County Dry Cleaners 1904 Country Road, District Heights, MD	215	Drycleaners – Inactive dry cleaner. FINDS/FRS – minor air permit.	Low
4	Diego Chicken Inc. 1950 County Road, District Heights, MD	450	FINDS/FRS – MD TEMPO permit	Low
5	County Plaza Shopping Center 1940 County Road, District Heights, MD	476	SHWS – A tenant operated as a dry cleaning operation from 1971 to 1992 and evidence of possible solvent release was observed during an MDE site inspection. A subsurface investigation included advancing borings upgradient and downgradient of the drycleaner which identified PCE impacts in groundwater downgradient of the site. This property is located hydraulically downgradient from the LOD.	Low
6	PG County Fire Dept Rochelle & Walker Mill Road, District Heights, MD	478	OCP – A case was opened on 8/15/1997 due to a vehicle accident with a release and cleanup reported. The case was closed on 8/28/1997.	Low
7	Walker Mill Hall Apartments 1910 Rochelle Avenue, Forestville, MD	518	UST – The site is registered with one 5,000-gallon heating oil tank, installed on 1/1/1962, permanently out of use and closed in place on 5/7/2002. OCP – An OCP case was opened on 1/8/2001 to convert the heating oil code into B9a for Residential HO and B9b for Commercial HO. A release and cleanup were reported, and the case was closed on 6/17/2002.	Low
8	Williamson's Auto Repair 1826 Rochelle Avenue, Capitol Heights, MD	559	FINDS/FRS, ICIS – MDE TEMPO permit. NAICS description for automotive body, paint, and interior repair and maintenance. Based on the distance from the LOD, impacts are unlikely.	Low
9	Berkley Estates 1926 Rochelle Avenue, District Heights, MD	594	FINDS/FRS, ICIS – Clean Water Act minor permit terminated since 2017. HMIRS – A spill occurred on 11/29/2000 involving the release of 15 gallons of #2 heating oil during a tank filling. The spill was reported to be contained and cleaned up.	Low

Project Area Site Descriptions

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1937	LOD appears to be on agricultural land. Walker Mill Road appears to be constructed. The surrounding area appears to be a mix of undeveloped, agricultural and residential properties.	Aerial
1971	Walker Mill Road appears constructed in its current configuration. Residential development is observed to the south of the LOD. Properties to the north appear under construction with disturbed earth visible.	Aerial
2018	LOD and surrounding area appear to be in their current configuration.	Aerial

Quadrant:	SW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Center median of Pennsylvania Avenue, northwest of Silver Hill Road	
City	District Heights	
County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in a center median along Pennsylvania Avenue (MD 4), northwest of Silver Hill Road, in District Heights, Maryland. The surrounding area is mixed residential and commercial properties. Construction of Pennsylvania Avenue as well as residential development in the surrounding area began in the late 1950s. Commercial development is visible starting in the 1970s. The LOD and surrounding area appeared in their current configuration by 2005. Six facilities in the surrounding area were listed on the OCP, SPILL, HMIRS, RCRA Generators or Dry Cleaner databases. The closest record, a SPILLS incident occurring 230 feet from the LOD, involved only a minor 2-gallon release of hydraulic fluid. An OCP case for dumping, which has since been closed, was noted 319 feet from the LOD. The remaining records were listed at distances of 466 feet to 925 feet from the LOD. Based on the distances from the LOD to these facilities and the nature of the incidents, impacts to the LOD from these sites are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1 & 7	Giant Food & Accubid Excavation Inc. 5500 Silver Hill Road, Capital Heights, MD	230	SPILLS – On 16/9/2013, a spill involving 2 gallons of hydraulic oil occurred due to a blown hydro hose. FINDS/FRS, ICIS – Minor air permit, a notice of violation was reported in February 2008, and reported to be in compliance in August 2008.	Low
2	5074 Silver Hill Court Forestville, MD	319	OCP – Case opened on 9/30/2002 for dumping with a release and cleanup noted. The case was closed on 10/23/2002.	Low
3	5058 Silver Hill Court District Heights, MD	466	FINDS/FRS – Minor air permit, no violations noted. OCP – Case opened on 6/6/2006 for a commercial heating oil tank closure with a release and cleanup reported. The case was closed on 8/3/2006.	Low
4	Penn Station Cleaners 5692 Silver Hill Road, District Heights, MD	925	Drycleaner, FED Drycleaner, RCRA-SQG, FINDS/FRS, ICIS – Based on available information, this is an inactive dry cleaner. A Notice of Violation was reported for the property under the ICIS database, but the RCRA records show no violations. Although ERIS shows this location 594 ft south of the LOD, it is actually located approximately 925 ft east of the LOD.	Low
5	5652 Silver Hill Road Forestville, MD	895	HMIRS – On 2/7/2002, freight shifted in transit and fell onto its side resulting in a leak of 2 gallons of hydrogen peroxide and peroxyacetic acid. Although ERIS shows this location 598 ft south of the LOD, it is actually located approximately 895 ft east of the LOD.	Low
6	Pepco 5626 Silver Hill Road Forestville, MD	680	OCP – Case opened on 5/4/1998 for an unknown source/surface spill, a release and cleanup were reported. The case was closed on 5/18/1998. Although ERIS shows this location 618 ft south of the LOD, it is actually located approximately 680 ft northeast of the LOD.	Low

HISTORICAL IMAGES SUMMARY

Ranking Rationale Site Summary		
<p>The LOD is located on the northwestern side of Silver Hill Road, spanning the southeastern portion of the property at 4500 Silver Hill Road, in Suitland, Maryland. Historically, a building was located on a portion of the LOD based on an aerial image from 1949, which was then demolished by 1977. The surrounding area is predominantly residential and commercial properties. The residential development in the area began in the 1940s and commercial development began in the 1970s. The LOD and surrounding area appeared in their current configuration by 2007. Given a building was formerly constructed on the LOD and was demolished, it is possible that fill material is present on the LOD. Further, it is unknown how this building was heating, so historical USTs may have been present. An historical gas station with multiple closed USTs, properties with OCP cases, an automotive repair facility, and two dry cleaning facilities are abutting the LOD to the south. Based on a review of available information provided by MDE through PIA requests, no substantial releases have occurred in the vicinity and the surrounding sites are not believed to have impacted the LOD. However, given the potential for USTs or fill material from the previous development at the LOD, impacts to the LOD cannot be ruled out. Thus, further investigation is warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

14	Discount Carpets 4625 Silver Hill Road, Suitland, MD	619	UST, OCP – The site is registered with three 3,000-gallon tanks and one 10,000-gallon tank, all installed on 4/1/1969 and permanently out of use and removed from the ground on 12/1/1987. The contents of each tank are unknown. An OCP case was opened on 1/14/1998 for motor/lube oil and closed the next day on 1/15/1998. No release was reported. Based on the distance to the LOD, impacts are unlikely.	Low
15	Parkway Terrace Apts 3416 Parkway Terrace Suitland, MD	645	OCP – A case was opened on 12/18/2000 with no release or cleanup reported, and the case was closed on 2/21/2001. UST – One 12,000-gallon heating oil UST was installed on 1/1/1950 and removed from the ground on 12/18/2000. FINDS/FRS – minor air permit, no violations were reported. Based on the distance to the LOD, impacts are unlikely.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1937	The LOD appears to be part of a larger agricultural property. The surrounding area appears to be a mix of undeveloped, agricultural and rural residential properties. Silver Hill Road appears to be constructed.	Aerial
1949	A building appears to be constructed on a portion of the LOD. A larger structure is developed to the north of the LOD and some residential development is observed on the south side of Silver Hill Road. The remainder of the surrounding area appears undeveloped.	Aerial
1977	The building formerly located on a portion of the LOD appears to have been demolished and disturbed ground is visible. The remainder of the surrounding area appears similar to the 1949 aerial image.	Aerial
1995	The LOD appears to be overgrown, undeveloped land. Further residential and commercial development are visible on the south side of Silver Hill Road.	Aerial
2007	LOD and surrounding area appear to be in their current configuration.	Aerial

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in a center median of Silver Hill Road (MD 458), between Royal Plaza Drive and Sunset Lane, in Suitland, Maryland. The surrounding area is predominantly residential and educational properties. Construction of Silver Hill Road was observed as early as 1937 and residential development in the surrounding area began in the late 1950s. The LOD and surrounding area appeared in their current configuration by 2009. A HMIRS case located 126 feet from the LOD involved the release of 5 gallons of fuel oil to the surface. The spilled fuel oil was contained and cleaned up. The adjacent Suitland School District property, which includes the Suitland High School and the former La Reine High School, was listed on the UST, OCT and RCRA SQG databases. One active 8,000-gallon heating oil UST is present. In addition, two 550-gallon used oil USTs were removed in 2004 and one 10,000-gallon heating oil UST was removed in 2007. An OCP case associated with the 2007 UST removal was closed in two months later. Two older OCP cases were also listed. In December 1994, an OCP case was opened for soil contamination (motor/lube oil). No remedial information was available, but the OCP case was closed 3 months later. In August 1990, an OCP was opened for unspecified purposes. This case was closed in May 1991. Finally, the high school was listed as a small quantity generator of ignitable, corrosive and reactive wastes. The Suitland school property is large, and it is believed that these incidents likely occurred at a significant distance from the LOD (>500 feet). Based on the anticipated distance and case status, impacts to the LOD from the Suitland School District property are unlikely.</p>

County	Prince George's	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located in the central median of Branch Avenue (MD 5), west of Beech Road, in Temple Hills, Maryland. The surrounding area is mixed-use residential/commercial. Based on a review of historical imagery, residential development began in the 1940s with commercial development continuing in the 1970s. The LOD and surrounding area was observed to be developed in its current configuration by the early 1980s. The large commercial property immediately north was listed on the RCRA Non-Gen database, meaning waste generation occurred in the past no longer occurs, as well as on the SPILLS database for a three-gallon release of sewage. Sewage is not considered an environmental concern. An auto dealership located 250 feet to the west had a 500-gallon used oil UST removed in 1990. No release was reported. The remaining records were for an additional RCRA generator listing and sewage release. Based on the status, distances or spill material released, impacts to the LOD from these incidents are unlikely.</p>

Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located within the center median of Pennsylvania Avenue (MD 4), east of Alton Street/Shadyside Avenue, in Capitol Heights/Suitland, Maryland. The LOD and surrounding area are predominantly residential properties with parkland to the immediate north. The LOD appeared as undeveloped land until the late 1950s when Pennsylvania Avenue was constructed. Residential development in the surrounding area began in the late 1950s and the surrounding area appeared in its current configuration by 2005. No records of concern were identified during this environmental review.

Street Address/Nearest Cross Streets	South side of Silver Hill Road, between Royal Plaza Drive and Sunset Lane	
City	Suitland	
County	Prince George's	
Type of property	ROW and private property	
Ranking Rationale Site Summary		
<p>The LOD is located along the southern side of Silver Hill Road (MD 450), between Royal Plaza Drive and Sunset Lane, in Suitland, Maryland. The LOD is T-shaped, with the center portion extending south. The surrounding area is predominantly residential and educational properties. Construction of Silver Hill Road was observed as early as 1937 and residential development in the surrounding area began in the late 1950s. The LOD and surrounding area appeared in their current configuration by 2009. A HMIRS case located 75 feet from the LOD involved the release of 5 gallons of fuel oil to the surface. The spilled fuel oil was contained and cleaned up. The adjacent Suitland School District property to the north, which includes the Suitland High School and the former La Reine High School, was listed on the UST, OCT and RCRA SQG databases. One active 8,000-gallon heating oil UST is present. In addition, two 550-gallon used oil USTs were removed in 2004 and one 10,000-gallon heating oil UST was removed in 2007. An OCP case associated with the 2007 UST removal was closed in two months later. Two older OCP cases were also listed. In December 1994, an OCP case was opened for soil contamination (motor/lube oil). No remedial information was available, but the OCP case was closed 3 months later. In August 1990, an OCP was opened for unspecified purposes. This case was closed in May 1991. Finally, the high school was listed as a small quantity generator of ignitable, corrosive and reactive wastes. The Suitland school property is large, and it is believed that these incidents likely occurred at a significant distance from the LOD (>500 feet). Based on the anticipated distance and case status, impacts to the LOD from the Suitland School District property are unlikely.</p>

Street Address/Nearest Cross Streets	East side of Ridge Road (MD 27), north of Apple Orchard Way	
City	Germantown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Ridge Road (MD 27), north of Apple Orchard Way, in Germantown, MD. An apple orchard, fields, and forested land is to the east of the LOD and dense single-family residential, constructed from 2013-2017, to the west. Although no records of concern in the vicinity of the LOD were identified during the environmental review, the LOD has a long history of agricultural use, from at least the 1950's. Therefore, there is a possibility that residual concentrations of organochlorine pesticides, such as dieldrin, DDT, chlordane, and lindane may be present in soils and sediments within the boundary of the LOD. Thus, further investigations may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of N Fredrick Road (MD 355), north of Ridge Road (MD 27), in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land to the north and west, commercial development to the south, and the Ridge Road Recreational Park to the east. Based on the 1959 aerial photograph, Frederick Road and Ridge Road were present and the LOD and surrounding areas were agricultural land. Residential development started by 1993. Commercial development started by 2005, and the LOD and surrounding areas were similar to their current configuration by 2005. A gas station located 715 feet to the south was identified as a RCRA SQG with no reported violations or releases. One spill case and gas station were identified in the records search report, approximately 715 feet and 600 feet, respectively from the LOD. A third site associated with an OCP case was listed as being approximately 60 feet south of the LOD; however, based on further review the site is more than 1.5 mile from the LOD. Based on the proximity of the three sites relative to the LOD, impacts are unlikely.</p>

County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of N Fredrick Road (MD 355), north of Ridge Road (MD 27), in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land to the north and west, commercial development to the south, and the Ridge Road Recreational Park to the east. Based on historical aerial and topographic maps, the LOD has never been developed, but has been part of agricultural land. Based on the 1959 aerial photograph, Frederick Road and Ridge Road were present and the LOD and surrounding areas were agricultural land. Residential development started by 1993. Commercial development started by 2005, and the LOD and surrounding areas were similar to their current configuration by 2005. A gas station located 715 feet to the south was identified as a RCRA SQG with no reported violations or releases. One spill case and gas station were identified in the records search report, approximately 635 feet and 505 feet, respectively from the LOD. A third site associated with an OCP case was listed within the LOD; however, based on further review the site is more than 1.5 mile from the LOD. Based on the proximity of the three sites relative to the LOD, impacts are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Ridge Road (MD 27), east of N Frederick Road (MD 355), in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land to the east, commercial development to the south, and west, and the Ridge Road Recreational Park to the north. Based on historical aerial and topographic maps, the LOD was developed as Ridge Road by 2005. Three environmental database listings were identified in the immediate area of the LOD, while one site was misplotted and was found to be over 1.5 mile west of the LOD. A surficial spill a quarter of gallon of petroleum was reported approximately 60 feet of the LOD. The material was reported addressed An Exxon gas station was listed approximately 630 feet south (downgradient) of LOD. A 7-Eleven gas station is located approximately 210 feet south (downgradient) of the LOD that currently has two gasoline USTs (15,000 gallon and 10,000 gallon) installed in 2010. The station is listed as a minor air source. A SPILL record was reported on 10/5/2015 for the underground contaminant system. There was no release, but there was an error with the system holding air. Based on the proximity of these sites relative to the LOD, impacts are believed to be unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of N Frederick Road (MD 355), north of Henderson Corner Road, in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land to the north, commercial development to the west, east, and south. Based on historical aerial and topographic maps, the LOD has never been developed, but has been part of agricultural land. Based on the 1959 aerial photograph, Frederick Road and Ridge Road were present and the LOD and surrounding areas were agricultural land. Residential development started in 1993. Commercial development started by 2005, and the LOD and surrounding areas were relative to their current configuration by 2005. A gas station is located approximately 160 feet to the east (upgradient) of the LOD. Currently, there are three active 12,000-gallon gasoline USTS registered to the facility that were installed in 1995. The gas station is a SQG of ignitable waste and benzene; no violations were found. Two OCP cases are associated with the gas station, one opened in 1995 for the installation of the three currently active USTs and another one opened in 2007 for the removal of two 40-gallon hydraulic oil tanks. Based on analytical results soils around the two former tanks were not impacted. Several small releases associated with petroleum are also documented at the site but are believed to not be a concern. Thus, impacts to the LOD from the gas station are unlikely. Two other sites were listed in the environmental database report; however, based on the distance or type of listing, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is along the east side of N Frederick Road (MD 355), north of Henderson Corner Road, in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land to the southeast, commercial development to the west, east, and south. Based on historical aerial and topographic maps, the LOD has never been developed, but has been part of agricultural land. Based on the 1959 aerial photograph, Frederick Road and Ridge Road were present and the LOD and surrounding areas were agricultural land. Residential development started in 1993. Commercial development started by 2005, and the LOD and surrounding areas were relative to their current configuration by 2005. A gas station is located approximately directly east (upgradient) of the LOD. Currently, there are three active 12,000-gallon gasoline USTS registered to the facility that were installed in 1995. The gas station is a SQG of ignitable waste and benzene; however, no violations were found identified during this review. Two OCP cases are associated with the gas station, one opened in 1995 for the installation of the three currently active USTs and another one opened in 2007 for the removal of two 40-gallon hydraulic oil tanks. Based on analytical results soils around the two former tanks were not impacts. Several small releases associated with petroleum are also documented at the site but are believed to not be a concern. Even though the regulatory documents reviewed did not indicate any subsurface impacts, the LOD is directly adjacent to the gas station and subsurface impacts within boundaries of the LOD cannot be completely ruled out. Further investigations are warranted to determine whether or not impacts are present within the boundaries of the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Exxon Gas 21101 Fredrick Rd Germantown, MD 20876	10	<p>FINDS/FRS, ICIS – Minor air permit. The gas station is listed at a RCRA-SQG of ignitable waste and benzene; no violations were identified during this review.</p> <p>UST, OCP - There are three active 12,000-gallon gasoline USTs registered to the facility that were installed in 1995. An OCP case was opened in 1995 for the installation of the three USTs and two leak monitoring wells. No releases are associated with this OCP case.</p> <p>2007 – Two 40-gallon hydraulic reservoir tanks were removed from the near the service bays in 2007. PID readings from the excavation recorded at 0.0 ppm. A soil sample was collected from approximately 10 feet bgs and analyzed for TPH-DRO, BTEX, and MTBE, all which were non-detect with the exception of a detected concentration of TPH-DRO at 29.7 mg/kg, which is below the MDE non-residential action level of 230 mg/kg. Based on the results of the investigation, the case was closed approximately 3 weeks later.</p> <p>HMIRS – In 2007, approximately 5-gallons of gasoline was released during a transfer accident.</p> <p>Based on the local topography, the site is believed to be upgradient of the LOD.</p>	Moderate
3	Applebees 21408 Frederick Rd Germantown, MD 20876	250	FINDS/FRS – The restaurant is in the database as an air source; no violations were identified during this review.	Low

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the north side of S Frederick Avenue (MD 355), southeast of N Westland Drive, in Gaithersburg, Maryland. The surrounding area is primarily commercial developments with residential properties further out in all directions. Residential and commercial development is observed to begin around 1951, and continued through 1993, when the surrounding area was observed in its current configuration. According to the environmental database report, ten sites were listed in the vicinity of the LOD. Of those ten sites, four of them had former/current USTs, reported spills, and/or OCP cases associated with them. One of those sites, gas station approximately 85 feet north (downgradient) of the LOD was identified as a potential concern to the LOD based on its proximity. In 2000, three 10,000-gallon gasoline USTs were excavated and removed from the site and one 10,000-gallon gasoline and one 12,000-gallon gasoline USTs (both fiberglass) were installed in their place and are still active. Records state the impacted soil will be taken offsite and disposed of; however, it is unknown the quantity removed or if residual impacted soil is still present onsite. Additionally, there are three other OCP cases associated with this site; however, files were not provided by MDE through the PIA request. Even though, the gas station is believed to be downgradient of the LOD, impacts cannot be ruled out based on a lack of historical information reviewed. Thus, further investigation may be warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Quince Orchard (MD124) Road, west of Great Seneca Highway (MD 119), in Gaithersburg, Maryland. The LOD is surrounded by residential development to the north, south, and west and commercial development to the east. Based on review of historical aerial and topographic maps Quince Orchard Road has been present since at least 1944. Residential and commercial development occurred by 1993. The surrounding area was observed to be developed in its current configuration around 2005. According to the environmental database report, three sites were listed in the vicinity of the LOD. Of those three sites, two of them had former/current USTs, reported spills, and/or OCP cases associated with them. One of those sites, a gas station is located approximately 130 feet south (downgradient) of the LOD. The facility has four active 10,000-gallon gasoline USTs present onsite. There have been no reported releases associated with the USTs. Several surficial releases associated with vehicles have occurred at the facility; however, since the releases are not believed to have impacted subsurface media, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Dickerson Road (MD 28), north of the intersection with Nicholson Farm Road, in Dickerson, Maryland. The surrounding area is a mix of commercial and residential properties, rural agricultural land, and forested areas. A railway is situated approximately 300 feet south. In 1959 the town was primarily agricultural and residential properties. The surrounding area was observed to be developed in its current configuration around 1981. An auto repair facility and former waste management company known as Dickerson Auto/ Titan Trash Service is located approximately 240 feet crossgradient of the LOD. The site is listed as a RCRA very small quantity generator of ignitable waste. The FINDS and ICIS databases list the site as having a regulated air permit. One 10,000-gallon diesel UST (installed in 1991) was excavated and removed from the site in 2008. Available records indicated that no impacted material was encountered and remediation/ cleanup was not required during the closure of the UST. Two other OCP cases are associated with the facility, one OCP case was opened in 1990 for an unknown reason and closed in 1995. The second OCP was opened for a compliance inspection in 2008. Based on historical imagery, the former USTs were at least 250 feet of the LOD. Several other sites with former USTs and OCP cases are believed to be located between 390 feet and 445 feet south (crossgradient) of the LOD. Thus, impacts to the LOD are unlikely.</p>

<p>The LOD is located along the west side of Dickerson Road (MD 28), between Nicholson Farm Road and Mt. Ephraim Road, in Dickerson, Maryland. The surrounding area is a mix of commercial and residential properties, rural agricultural land, and forested areas. A railway is situated south and adjacent to the LOD. In 1959 the town was primarily agricultural and residential properties. The surrounding area was observed to be developed in its current configuration in around 1981. The environmental database report listed Dickerson Auto Center, a commercial auto body and paint shop and Titus Trash Service approximately 300 feet to the west of the LOD. Based on the local topography they are believed to be crossgradient to the LOD.. The site was listed in the FINDS/FRS and ICIS databases as having an air permit for auto paint activities. No violations were noted. Three OCP compliance violations were reported at the site from 1995 to 2010 with no environmental releases reported. A 10,000-gallon diesel tank was removed from the site in 1991 with no issues. The Dickerson Market approximately 515 feet south (downgradient) has five OCP cases from 1984 to 2008 for compliance and tank removal that are closed. The UST database indicates three gasoline and two diesel USTs currently in use and eight former USTs removed from the site. There are no current violations associated with this site. Based on the inferred hydraulic gradient of these sites (crossgradient/ downgradient) relative to the LOD, impacts are believed to be unlikely.</p>

Street Address/Nearest Cross Streets	North side of Darnestown Road (MD 28), east of Beallsville Road	
City	Beallsville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Darnestown Road (MD 28), southeast of Beallsville Road, in Beallsville, Maryland. A custom home building company, fire station, and ballpark are located to the north/northwest. Forested land is to the northeast of the LOD. Residential properties are located to the south. Residential and commercial properties are located to the west and southwest. Based on historical aerial and topographic maps, the surrounding area was observed to be primarily agricultural land up until 1944 when residential development began to occur. Development in the surrounding area continued up until approximately 1993, when the surrounding area was observed to be developed in its current configuration. Two sites with former USTs and/or OCP cases were listed in the environmental database report. The first site is fire station, approximately 345 feet to the northwest, was listed as having six former petroleum USTs ranging in size from 300-gallons to 2,000-gallons registered to the property. All six USTs were excavated and removed from the site between 1990 and 2010. Based on a review of available data provided by MDE through a PIA request, no substantial releases to soil and/or groundwater were identified during the closure and removal of the USTs. Currently, the facility has a 2,000-gallon heating oil AST present onsite. The second site is a former restaurant located approximately 570 feet west of the LOD. According to available records, an OCP case related to a compliance inspection was opened in 1995 and closed approximately 8 months later. Records did not indicate that a release was identified or cleanup/ remediation was required. Based on the local topography, both sites are believed to be crossgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Beallsville Road (MD 109), north of Big Woods Road, in Dickerson, Maryland. The surrounding area is comprised of agricultural land, residential properties and forested areas. The LOD is on a portion of Beallsville Road and was primarily agricultural land since 1959. The surrounding area was observed to be developed in its current configuration in 2006. Two sites with OCP cases were identified in the environmental database report. The first site is a residential property approximately 220 feet west (downgradient) of the LOD that had a reported release of approximately 150-gallons of heating from a ruptured AST located in the basement of the structure in April 2015. The spill was cleaned up and the incident was closed on December 2015. Since the release occurred inside the structure and the site is located downgradient of the LOD, impacts are unlikely. The second site is an excavating company approximately 425 feet northwest (crossgradient) of the LOD. The UST database lists six diesel USTs ranging from 15,000 to 20,000-gallons that were permanently removed from the site between 1992 to 2000. One of the USTs was found to have impacted the surrounding area during its removal. The release was cleaned up and the case closed on in February 2001. A second release in the OCP was reported for a surface spill from a motor/lube tank in October 1995. The case was closed in August 1996. Based on the nature and proximity of the incidents/ releases summarized above, impacts to the LOD are unlikely.</p>

One of the USTs was found to have impacted the surrounding area during its removal. The release was cleaned up and the case closed on in February 2001. A second release in the OCP was reported for a surface spill from a motor/lube tank in October 1995. The case was closed in August 1996. The second site is associated with a residential property approximately 215 feet southwest (downgradient) of the LOD that had a reported release of approximately 150-gallons of heating from a ruptured AST located in the basement of the structure in April 2015. The spill was cleaned up and the incident was closed in December 2015. The second site is associated. Based on the nature and proximity of the incidents/ releases summarized above, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1,2	William Dorset/ 20800 Beallsville Road	570	OCP Case/UST – The William Dorsett excavating company (OCP/UST) 11788) located at 20800 Beallsville Road is listed in the ERIS database (Case No. 01-0035MO) with a release from a motor oil UST during tank closure activities. The release was cleaned up and the case closed on 2/8/01. A second release in the OCP (Case No. 96-0751MO2) is documented for a surface spill from a motor/lube tank. The case was closed on 8/7/96. The UST database lists six diesel USTs (Facility ID: 11788) ranging from 15,000 to 20,000-gallons that were permanently removed from the site from 1992 to 2000. The Dorsett site is located approximately 570 feet west and downgradient from the LOD, not within the LOD as stated in the environmental database report.	Low
3,4	Former Sanderson/ Jamison Residence/ 20720 Beallsville Road	215	OCP Case/Spills – The ERIS database lists the Former Sanderson/Jamison Residence (OCP/Spills) with Case No. 15-0597MO. ERIS lists the site distance as 185 feet southwest and crossgradient of the LOD; however, the site is approximately 215 feet southwest (downgradient) of the LOD. The release was from a ruptured residential heating oil AST located in the basement. Approximately 150 gallons of heating oil was released onto the basement floor. The spill was cleaned up and the incident was closed on 12/18/15.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Beallsville Road (MD 109), north of Big Woods Road, in Dickerson Maryland. Forested areas and residential properties are situated north, west, and southwest of the LOD. Agricultural land is east of the LOD across Beallsville Road. The area was primarily agricultural and residential properties in 1959. The surrounding area was observed to be developed in its current configuration in 2006. Two sites with OCP cases were identified in the environmental database report. The site is an excavating company approximately 430 feet west (crossgradient) of the LOD. The UST database lists six diesel USTs ranging from 15,000 to 20,000-gallons that were permanently removed from the site between 1992 to 2000. One of the USTs was found to have impacted the surrounding area during its removal. The release was cleaned up and the case closed on in February 2001. A second release in the OCP was reported for a surface spill from a motor/lube tank in October 1995. The case was closed in August 1996. The second site is associated with a residential property approximately 200 feet southwest (downgradient) of the LOD that had a reported release of approximately 150-gallons of heating from a ruptured AST located in the basement of the structure in April 2015. The spill was cleaned up and the incident was closed in December 2015. The second site is associated. Based on the nature and proximity of the incidents/ releases summarized above, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located on the east side of Beallsville Road (MD 109), south of Big Woods Road, in Dickerson, Maryland. The LOD consists of a portion of Beallsville Road and an agricultural property in the ROW. Residential properties with forested areas are situated north and west of the LOD. Agricultural land is found east of the LOD and generally throughout the entire area. The Town of Beallsville and a golf course are located to the south. The surrounding area is primarily comprised of agricultural land and forested areas. The area was primarily agricultural land in 1959. The surrounding area was observed to be developed in its current configuration in 2005. No records of concern were identified in the vicinity of the LOD during this environmental review.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along West side of Fisher Avenue (MD 107), northwest of Tom Fox Avenue, in Poolesville, Maryland. The LOD is surrounded by residential properties to the north and east, by a church to the west, and forest to the south. Based on historical aerial and topographic maps, the LOD has never been developed; however, it has been part of agricultural property. Based on the 1959 aerial photographs, the LOD is parallel to existing Fisher Avenue on agricultural land surrounded by farm properties. Residential development with residences on small tracts of land in the surrounding area occurred between 1972 and 1995. The surrounding area was observed to be developed in its current configuration around 2005. No records of concern were identified in the vicinity of the LOD during this environmental review.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
5	Fire Station/ 20633 Boland Farm Rd Germantown, MD	400	<p>FINDS/FRS, ICIS, OCP, UST, – Downgradient to the LOD. The fire station has three permanently out-of-use gasoline and diesel USTs that were removed from ground on 11/29/2018. There following OCP cases are listed for the site:</p> <p>2010 - A release of 10 to 20 gallons of diesel was released from a diesel generator day-tank in January 2010. The material ran along the driveway of the fire station, some of which entered a storm drain. MDE inspected the area where the release occurred and found no evidence of impacts. The case was closed in January 2011.</p> <p>2018 – Two 2,500-gallon diesel USTs and one 1,000-gallon gasoline UST were excavated and removed from the site. No substantial staining or odors were observed in the excavations. Confirmation samples were collected from the bottom of the excavation and analyzed for TPH-DRO/GRO and VOCs, which were non-detect, with the exception of three low-level detections of trichloroethylene, well below MDE cleanup standards. Based on the lack of release the cas was closed in May 2019.</p>	Low
6	Mobil/ 20650 Frederick Rd Germantown, MD	515	<p>OCP, UST, FINDS/FRS, ICIS – The gas station has three currently-in-use 20,000 gallon gasoline and diesel USTs. There are four permanently out-of-use USTs that were removed from ground on 6/34/2004. The following OCP cases are in the listing:</p> <p>Case opened on 1/28/1992 with no additional details. Ranking Rationale Site Summary		
<p>The LOD is located along the east side of N. Frederick Road (MD 355), north of the intersection with Collins Drive, in Germantown, Maryland. The LOD is located in the southbound lanes, sidewalk and adjacent landscaped area. The LOD is surrounded by multi-family residential properties to the west, commercial to the north and south, and Neelsville Middle School to the east. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944. Development in the surrounding area began by 1981 and continued through 2005, when the surrounding area was observed to be developed in its current configuration. Six environmental database listings were identified in the immediate area of the LOD. Of those six sites, five sites had former/ active USTs, OCP cases, or documented spills. The middle school does not have any reported releases. A gas station and church/school, and fire station with former USTs and/or known releases are located between 390 and 650 feet north (crossgradient) of the LOD, as well as facility with a former UST and gas station property between 360 and 375 feet south (crossgradient) of the LOD. Based on a review of available information provided by MDE through a PIA request for these site, impacts are unlikely since it is believed that the sites are crossgradient of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Neelsville Church 20701 Frederick Rd Germantown, MD	650 to 800	OCP, UST – In 2008, a 2,000-gallon and 3,000-gallon heating UST were excavated and removed from the site. Based on available data provided by MDE through a PIA request, the former USTs are between . A release and cleanup was reported. Closure was granted on 5/24/2010. Based on available information provided by MDE through a PIA request, the former USTs are 650 feet and 800 feet northeast (crossgradient) of the LOD.	Low
2	A&P Contractors 20516 Frederick Rd Germantown, MD	360	OCP, UST –The site has one permanently out-of-use 550-gallon gasoline UST that was removed from ground on 7/2/1999. According to available records no staining or odors were observed in the excavation. PID readings ranged between 35.1 and 44 ppm. No perforations were observed in the UST. Thus, the MDE inspector onsite instructed the contractor to backfill the excavation and the case was closed approximately 3 weeks later. Based on the local topography, the UST was at least 350 feet southwest (crossgradient) of the LOD.	Low
3	Middle School 11700 Neelsville Church Rd Germantown, MD	365	RCRA VSQG, FINDS/FRS, ICIS – Downgradient to the LOD. The school is a VSQG for ignitable waste, corrosive waste, and reactive waste. No violations were found. Therefore, impacts to the LOD are unlikely.	Low
4	Chevron 20510 Frederick Rd Germantown, MD	390	OCP, UST, FINDS/FRS, ICIS – This gas station is located upgradient to the LOD. There are four currently in use 10,000 to 12,000 gallon gasoline and diesel USTs installed 10/1/1997. There are seven permanently out-of-use USTs that have been removed from the ground. The gas station is a permitted air source. The gas station has the following OCP cases: Case opened 6/11/1992 due to a tank closure. A release and cleanup was reported. Closure was granted on 6/3/1999. Case opened on 10/22/2000 due to a compliance inspection. A release and cleanup was reported. Closure was granted on 1/9/2001. Case opened on 3/5/2001. No release was reported. Closure was granted on 3/14/2001. Case opened on 6/5/2008 due to a retrofit/repair. A release and cleanup was reported. Closure was granted on 8/25/2010. Based on available data, known impacted soil and groundwater are present on-site; however, groundwater at the site is believed to be flowing to the west/northwest, crossgradient of the LOD	Low

6	Fire Station 20633 Boland Farm Rd Germantown, MD	525	<p>FINDS/FRS, ICIS, OCP, UST, – Downgradient to the LOD. The fire station has three permanently out-of-use gasoline and diesel USTs that were removed from ground on 11/29/2018. There following OCP cases are listed for the site:</p> <p>2010 - A release of 10 to 20 gallons of diesel was released from a diesel generator day-tank in January 2010. The material ran along the driveway of the fire station, some of which entered a storm drain. MDE inspected the area where the release occurred and found not evidence of impacts. The case was closed in January 2011.</p> <p>2018 – Two 2,500-gallon diesel USTs and one 1,000-gallon gasoline UST were excavated and removed from the site. No substantial staining or odors were observed in the excavations. Confirmation samples were collected from the bottom of the excavation and analyzed for TPH-DRO/GRO and VOCs, which were non-detect, with the exception of three low-level detections of trichloroethylene, well below MDE cleanup standards. Based on the lack of release the cas was closed in May 2019.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of N. Frederick Road (MD 355),north of Appledowre Way, in Germantown, Maryland. The LOD is surrounded by residential properties on small tracts of land. The Montgomery College is located to the west. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944. Based on review of the 1959 aerial the LOD and surrounding areas were residential with agricultural land. Residential and commercial development was observed on the 1993 aerial and continued through 2006, when the surrounding area was observed to be developed in its current configuration. Two environmental database listings were identified in the immediate area of the LOD. The first site is a restaurant (155 feet crossgradient) with no releases or violations found. The second site is associated with a trailer park approximately 305 feet to the north (crossgradient) that had a OCP case open in January 1992 and closed approximately 3 months later. There was no reported release or cleanup required. Thus, impacts to the LOD are unlikely.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Bucklodge Road (MD 117), east of Buck Ridge Road, in Boyd's, Maryland. The LOD is surrounded by residential properties on large tracts of land and agricultural property. A railroad is located to the south. Based on historical aerial and topographic maps, the LOD has never been developed; however, it has been part of agricultural property. Based on the 1959 aerial photographs, the surrounding area appeared to be agricultural with residences to the north and south. The railroad is also located to the south. Residential development with residences on large tracts of land in the surrounding area has been similar to their current configuration since 2005. No records of concern in the vicinity of the LOD were identified during the environmental review.</p>

Street Address/Nearest Cross Streets	Southwest of the intersection of Darnestown Road (MD 28) and Bucklodge Road (MD 117)	
City	Boysds	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located west of the intersection of Darnestown Road (MD 28) and Bucklodge Road (MD 117), in Boysds, Maryland. The LOD is surrounded by agricultural land to the north, south, and west, and forested area and stream to the east. A farm is located further to the south. Based on historical aerial and topographic maps, no substantial changes to the LOD and surrounding area have occurred since at least 1959. No records of concern were identified in the vicinity of the LOD during the environmental review.

Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located along the north side of Darnestown Road (MD 28), northwest of and Bucklodge Road (MD 117), in Poolesville, Maryland. The surrounding area is primarily agricultural land. Two residences are located to the north. Based on historical aerial and topographic maps, the LOD has never been developed; however, it has been part of agricultural property. The surrounding area has been similar to its current configuration since 2006, when one of the residential structures currently present to the north was constructed. No records of concern were identified in the vicinity of the LOD during the environmental review.

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	North side of Darnestown Road (MD 28), east of Jerusalem Road	
City	Poolesville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Darnestown Road (MD 28), east of Jerusalem Road, in Poolesville, Maryland. The surrounding area is primarily agricultural and forested land, with several residential structures located to the north/northeast and south. Based on historical imagery, the surrounding area has been agricultural land since at least the 1940s. One record of concern, a site approximately 290 feet northeast of the LOD, previously had a 10,000-gallon gasoline UST. According to records provided by MDE, the UST was excavated and removed from the site in June 1994. The onsite MDE inspector screened excavated soils, as well as the floor of the excavation with a PID. No indications that a release had occurred were observed during the removal of the tank. The MDE inspector instructed the contractor to backfill the excavation, and the OCP case was subsequently closed approximately 1 year later. Based on the local topography, the site is believed to be crossgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Harland Shoemaker 18811 Darnestown Rd Poolesville, MD 20837	290	OCP, UST – In June 1994, an 10,000-gallon gasoline UST that had been inactive for approximately 5-years was excavated and removed from the property. The MDE inspector onsite screen the excavated soils, as well as the floor of the excavation with a PID that recorded minimal reading between 0 ppm and 2 ppm. The MDE inspector instructed the contractor to backfill the excavation and disposed of the UST at the appropriate facility. The case received closure from MDE approximately one year later. Based on the local topography, the site is believed to be crossgradient of the LOD.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1944	Darnestown Road is present, and the surrounding area appears to be mixed agricultural and woodlands. Several structures are identified further to the east, west, and south.	Topo
1959	The surrounding area is primarily developed as agricultural land. A farm is observed further to the south.	Aerial
1993	Additional residential development is observed to the north/northeast. However, the majority of the surrounding area is still agricultural land. The surrounding area is observed to be developed in its current configuration.	Aerial

LOD ID: WAS-4397	Site Rank: Low	Figure Location:
Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Northeast side of Darnestown Road (MD 28), north of White Ground Road	
City	Boyd's	
County	Montgomery	
Type of property	ROW	
Ranking Rationale		
<p>The LOD is located along the northeast side of Darnestown Road (MD 28), north of White Ground Road, in Boyd's, Maryland. The LOD is surrounded by agricultural land and two residential properties to the west and southwest. Based on historical aerial and topographic maps, Darnestown Road has been present since at least 1944. Based on the 1959 aerial photograph, the LOD and surrounding area are agricultural land. Residences in the immediate area were observed to be present around 1981, when the surrounding area was observed to be developed in its current configuration. Two environmental database listings were identified in the immediate area of the LOD. The first database listing is related to a petroleum release that occurred approximately 400 feet to the north (upgradient) in 1994 and was closed the same day. The second environmental database listing is associated with a service station to the south of the LOD. The service station has five former USTs registered to it that were excavated and removed from the site in 1989 (4 USTs) and 1994 (1 UST). OCP cases were opened for both of the UST removals; however, available records do not state whether impacted materials were encountered during the closures of the UST, or whether cleanup/ remediation was required. Based on a review of historical imagery, the former USTs were located approximately 205 feet south (downgradient) of the LOD. Thus, impacts to the LOD are unlikely based on distance.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	C&B Service Station 16615 Darnestown Rd Boys, MD 20841	200	<p>UST - This former service station has five permanently out-of-use USTs that were removed from ground on 4/17/1989 (4 tanks) and 9/19/1995 (1 tank). There were tanks for gasoline, kerosene, and used oil. Based on historical aerial imagery, the former USTs are believed to be approximately 205 feet southeast (downgradient) of the LOD.</p> <p>OCP - A case was opened and closed on the same date on 6/23/1989. A release case was opened on 6/22/1994 and closed on 10/12/1995. The database report did not indicate whether releases and cleanups had occurred.</p>	Low
2	Pepco 16715 Darnestown Rd Boys, MD 20841	420	OCP – A case was opened on 9/9/1994 and closed the very same day. It is not reported whether a release and cleanup occurred; however, since the case was opened and closed on the same day, any impacts are believed to be minor and most likely surficial in nature.	Low

Based on historical aerial and topographic maps, Whites Ferry Road has been present since at least 1944 and the surrounding area was primarily agricultural land up until 2005, which residential development was observed to the east. One environmental database listing was identified in the immediate area of the LOD. A sod farm is located approximately 450 feet to the west of LOD, and is believed to be hydraulically cross-gradient. Two permanently out of use USTs were removed on 8/28/1989. One was a 2,000-gallon diesel UST; however, no information is available for the second UST. Impacts to the LOD are believed to be unlikely, based on the absence of reported releases and the site's crossgradient proximity relative to the LOD.</p>

1	Sugarland Sod Farm 16901 Whites Ferry Road Darnestown, Maryland 20874	450	UST – The sod farm is located cross-gradient from the LOD. Based on the listings there were two permanently out of use USTs that were removed on 8/28/1989. One was a 2,000 gallon diesel UST, however no information is available for the second UST. Since there are no records of release, impacts to the LOD are unlikely.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1944	Whites Ferry Road is present along with residential development in the surrounding areas.	Topo
1959-1994	LOD and surrounding area are agricultural in use. Residence to the east and west are present.	Aerial
2005-2018	Residential development is observed to the east. The surrounding area is observed to be developed similar to its current configuration.	Aerial

HISTORICAL IMAGES OF IMPORTANCE		
Year: 1944	Year: 1959	Year: 2005
 A topographic map from 1944 showing a road network. A road is highlighted in pink, running horizontally across the middle. To the left of the road is a circular marker with the number '107'. To the right of the road is a circular marker with the number '11'. The map shows contour lines and other geographical features.	 An aerial photograph from 1959 showing the same area. The road highlighted in pink in the 1944 map is visible as a light-colored line. The surrounding area is mostly agricultural fields.	 An aerial photograph from 2005 showing the same area. The road highlighted in pink in the 1944 map is visible as a light-colored line. The surrounding area is mostly agricultural fields, with some residential development visible to the east.

Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Whites Ferry Road (MD 107), west of the intersection with Darnestown Road (MD 28), in Boyds, Maryland. Residential properties are present to the west, south, and southeast. Agricultural fields are present to the northeast. Based on historical aerial and topographic maps, the surrounding area has been developed similar to its current configuration since at least 1959. One environmental database listing was identified approximately 70 feet to the east of the LOD. According to available records, a release of approximately 10-gallons of lube oil occurred at Darnestown Road and Whites Ferry Road in April 2017, due to a motor vehicle accident. The spill was contained and removed. Based on gradient, quantity of the spill and removal activities, impacts to LOD are unlikely.</p>

Street Address/Nearest Cross Streets	Northern side of Darnestown Road (MD 28), east of Berryville Road	
City	Darnestown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the northern side of Darnestown Road (MD 28), immediately east of Berryville Road, in Darnestown, Maryland. The LOD is surrounded by residential properties on large tracks of land. Based on historical aerial and topographic maps, the surrounding area was primarily agricultural and forested land from at least the 1940's through the 1980's, when residential development began. Residential development continued through 2015, when the surrounding area was observed to be developed in its current configuration. Two OCP cases were identified in the vicinity of the LOD. The first case, is associated with property approximately 250 feet north of the LOD, involved a release motor/lube oil from an AST. The release most likely surficial in nature, the material was addressed and the case was closed approximately two months later. The second case is associated with a site approximately 580 feet southeast (downgradient) from the LOD and was open and closed the same day it was opened (12/1/1995). No other info was available. Based on the proximity of the sites relative to the LOD, impacts to the LOD is unlikely.</p>

Ranking Rationale Site Summary		
The LOD is located along the north side of Barnesville Road (MD 117), southeast of Slidell Road, in Boyd, Maryland. The LOD is surrounded by residential properties on large tracts of land and agricultural property. A railroad is located to the south. Based on historical aerial and topographic maps the surrounding area appeared to be primarily agricultural properties, with residences to the north and south up until residential development began to occur. Residential development continued through 2005, when the surrounding area was observed to be developed in its current configuration. No records of concern were identified in the vicinity of the LOD during this environmental review.

City	Boys	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the western side of Barnesville Road (MD 117), south of Ganley Road, in Boys, Maryland. The surrounding area consists of low-density residential development which replaced agricultural uses in the late 1950's through 1970's. Two SPILLS incidents were identified in the immediate vicinity of the LOD. The first incident, occurring 330 feet from the LOD, involved the release of approximately one quart of heating oil due to human error while refilling a residential heating oil tank. The spill was cleaned up with absorbent pads and wash water. The second incident, occurring 420 feet upgradient from the LOD, involved the release of an unknown quantity of #2 heating oil from a residential heating oil AST. A magnetic patch was applied until the tank could be emptied. Both releases are believed to be surficial in nature. Thus, impacts to the LOD are unlikely based on the distances of these incidents.</p>

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Eastern side of Barnesville Road (MD 117), south of Ganley Road	
City	Boyd's	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the eastern side of Barnesville Road (MD 117), between Clarksburg Road and Ganley Road, in Boyds, Maryland. The surrounding area consists of low-density development, including both commercial and residential uses, mostly developed prior to 1908; the area is a historic district. Little Seneca Lake is located to the east. OCP/UST/SPILLS cases were identified at distances ranging between 165 and 605 feet from the LOD. The most significant of these, a US Post Office located 165 feet to the west, was listed on the UST, OCP and SPILLS databases. In 1999, a 550-gallon steel heating oil tank was removed and replaced with a new 500-gallon double-walled steel UST. Three small (1/8") perforations were identified on the bottom of the old UST. Two soil samples were collected. A grab sample from the bottom contained 117 mg/Kg TPH-DRO, while a composite collected from stockpiled soils was non-detect. The detected TPH-DRO concentration beneath the former UST was below the residential soil cleanup standard, and MDE closed the OCP case. A minor spill of approximately 1.5-gallons occurred in 2014 during product transfer activities. Groundwater contouring data obtained for the Boyds Country Store site, located 605 feet from the LOD and also on the UST and OCP databases, identifies the groundwater flowing is in a southwesterly direction, away from the LOD. Based on this groundwater flow direction, the US Post Office is downgradient of the LOD, while all other listed sites are crossgradient. Thus, impacts to the LOD are unlikely.</p>

Project Area Site Descriptions

LOD ID: WAS-4450	Site Rank: Low	Figure Location: 
Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Northwestern corner of Barnesville Road (MD 117) and Clarksburg Road (MD 121)	
City	Boyd's	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is an area near the northwest corner of Barnesville Road (MD 117) and Clarksburg Road (MD 121), in Boyd's, Maryland. A portion of the LOD extends east across Clarksburg Road. Woodland are located to the north and east, followed by Little Seneca Lake; low-density residential and commercial structures followed by agricultural fields are to the southwest; and agricultural fields are to the to the southeast. The majority of the development occurred prior to 1908; the area is a historic district. Two OCP/UST sites cases were identified at distances of 215 feet and 335 feet to the west. The most significant of these two, a former auto repair facility (Dean's Garage) located 215 feet from the LOD, had two 1,000-gallon steel gasoline USTs removed in 1994. PID soil screening levels ranged between 10 and 36 ppm, which the MDE inspector allowed to be reused, if necessary. Two soil samples were collected, one from above the former USTs and one below, and analyzed for TPH, BTEX and MTBE. Concentrations of toluene, ethylbenzene and xylenes were detected, but at concentrations below the MDE's Residential Soil Cleanup Standards. MDE subsequently closed the OCP case on 6/29/94. Groundwater contouring data obtained for the Boyd's Country Store site, located approximately 335 feet from the LOD and also on the UST and OCP databases, identifies groundwater flowing in a southwesterly direction, away from the LOD. Thus, impacts to the LOD from either the former garage or the Boyd's Country Store are unlikely.</p>

Street Address/Nearest Cross Streets	Southwestern corner of Barnesville Road (MD 117) and Clarksburg Road (MD 121)	
City	Boyd's	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is an area near the southwest corner of the intersection of Barnesville Road (MD 117) and Clarksburg Road (MD 121), in Boyds, Maryland. A portion of the LOD extends east across Clarksburg Road. Woodland followed by Little Seneca Lake are located to the north and east; low-density residential and commercial structures followed by agricultural fields to the southwest; and agricultural fields are to the to the southeast. The majority of the development occurred prior to 1908; the area is a historic district. Two OCP/UST sites cases were identified at distances of 200 feet and 325 feet to the west. The most significant of these two, a former auto repair facility (Dean's Garage) located 200 feet from the LOD, had two 1,000-gallon steel gasoline USTs removed in 1994. PID soil screening levels ranged between 10 and 36 ppm, which the MDE inspector allowed to be reused, if necessary. Two soil samples were collected, one from above the former USTs and one below, and analyzed for TPH, BTEX and MTBE. Concentrations of toluene, ethylbenzene and xylenes were detected, but at concentrations below the MDE's Residential Soil Cleanup Standards. MDE subsequently closed the OCP case on 6/29/94. Groundwater contouring data obtained for the Boyds Country Store site, located 325 feet from the LOD and also on the UST and OCP databases, identifies groundwater flowing in a southwesterly direction, away from the LOD. Thus, impacts to the LOD from either the former garage or the Boyd's Country Store are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Anderson & Kelley Auto Parts, Dean's Garage 15100 Barnesville Rd	200	<p>OCP – In 1994, two 1,000-gallon steel gasoline USTs were excavated and removed. PID soil screening levels ranged between 10 and 36 ppm, which the MDE inspector allowed to be reused, if necessary. Two soil samples were collected, one from above the former USTs and one below, for TPH, BTEX and MTBE analysis. TPH, MTBE and benzene were non-detect, while toluene was detected at 174 ug/Kg above and 370 ug/Kg below; ethylbenzene was non-detect above and 100 ug/Kg below; and xylenes were 850 ug/Kg above and 1,500 ug/Kg below. These detections are all below MDE's Residential Soil Cleanup Standards, and MDE closed the OCP case on 6/29/94.</p> <p>This site is believed to be cross- to downgradient of the LOD based on groundwater flow direction identified during review of Boyds Country Store data (ERIS Site ID #2).</p>	Low
2	Boys Country Store 15110 Barnesville Rd	325	<p>FINDS/FRS, OCP, UST – Four steel USTs (550-gallon kerosene, 550-gallon diesel, and two 1,000-gallon diesel) were installed in 1975 and removed in 1994. There is an open OCP case from 1993 for a release with motor/lube oil groundwater contamination. Based on information provided by MDE, impacts groundwater impacts remain, specifically MTBE. As of September 2019, the highest MTBE concentration was 5,100 ug/L, down from the historical high of 42,000 ug/L. While groundwater impacts are present above MDE groundwater standards, groundwater contour maps show that groundwater is flowing in a southwesterly direction, away from the LOD.</p>	Low
3	National Solvent Company 15114 Barnesville Rd	425	<p>FINDS/FRS – Minor air permit; no violations identified during this review.</p>	Low
4	15116 Barnesville Rd	435	<p>ERNS – Report of a train collision in 2015, no release reported.</p>	Low

City	Boys	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along Clopper Road (MD 117), east of White Ground Road, in Boys, Maryland. The LOD contains a portion of Clopper Road, an adjacent grassy strip with a few trees to the south, and a small portion extends north across the street, and abuts the auto repair shop. North of the LOD and repair shop is railroad and Little Seneca Lake. Undeveloped fields are located to the south. The site abuts an vehicle storage and repair facility with documented releases and former USTs. A 8,000-gallon diesel #2 UST and 8,000-gallon regular diesel UST were excavated and removed from the site in 1994. No staining or odors were observed in the excavation. PID readings from the two excavation ranged from 0.0 ppm to 4.6 ppm. Based on the lack of release, the case received closure from MDE in 1995. The USTs are believed to be at least 100 feet north (downgradient) of the LOD. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	East side of Clarksburg Road (MD 121), north of Barnesville Road (MD 117)	
City	Boyd's	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the eastern side of Clarksburg Road (MD 121), north of Barnesville Road (MD 117), in Boyd's, Maryland. Forested land followed by Little Seneca Lake are located to the north and east; low-density residential and commercial structures followed by agricultural fields to the southwest; and agricultural fields are to the to the south. The majority of the development occurred prior to 1908; the area is a historic district. Two OCP/UST sites cases were identified at distances of 425 feet and 535 feet to the west. The closest of these, a former auto repair facility (Dean's Garage) located 425 feet from the LOD, had two 1,000-gallon steel gasoline USTs removed in 1994. PID soil screening levels ranged between 10 and 36 ppm, which the MDE inspector allowed to be reused, if necessary. Two soil samples were collected, one from above the former USTs and one below, and analyzed for TPH, BTEX and MTBE. Concentrations of toluene, ethylbenzene and xylenes were detected, but at concentrations below the MDE's Residential Soil Cleanup Standards. MDE subsequently closed the OCP case on 6/29/94. Groundwater contouring data obtained for the Boyd's Country Store site, located 535 feet from the LOD and also on the UST and OCP databases, identifies groundwater flowing in a southwesterly direction, away from the LOD. Thus, impacts to the LOD from either the former garage or the Boyd's Country Store are unlikely.</p>

Ranking Rationale Site Summary		
The LOD is located on the eastern side of Clarksburg Road (MD 121), just south of the bridge over Little Lake Seneca, in Boyd's, Maryland. The LOD and surrounding area were used for agricultural land from at least 1959 until Little Lake Seneca was created in 1984. No records of concern were identified during this environmental review.

Ranking Rationale Site Summary		
The LOD is located in the western side of Clarksburg Road (MD 121), immediately north of Ridge Oak Drive, in Boyd, Maryland. A portion of LOD extends south across Ridge Oak Drive to Little Seneca Lake. Residential structures are located to the north and west, wooded areas to the east, and the reservoir to the south. The area was agricultural land from at least 1959 until Little Seneca Lake was created in 1984. No records of concern were identified during this environmental review.

Street Address/Nearest Cross Streets	East side of Frederick Road (MD 355), south of Middlebrook Road	
City	Germantown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Frederick Road (MD 355), south of Middlebrook Road, in Germantown, Maryland. The majority of the LOD is located along the east side of the northbound lane of N. Frederick Road and the remaining portion is in the adjacent landscaped area of a commercial center. The LOD is surrounded by commercial properties. The Germantown East Local Park is located to the northwest. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944 and commercial development in the surrounding area was observed to start around 1993. By 2017, the surrounding area was observed to developed in is current configuration. A gas station was located approximately 100 feet northeast (crossgradient) from the LOD up until 2007. The structure itself was demolished 2015, and redeveloped as an urgent care center. During the closure of the gas station in April 2007, the three 12,000-gallon gasoline USTs, as well as the ancillary equipment onsite including the product lines, sump/vapor recovery systems, and dispenser islands were excavated and removed from the site. No substantial subsurface impacts were encountered during the removal of the USTs. Only low-level concentrations of toluene and MTBE below MDE action levels were detected in soil samples from the excavated areas around the USTs and ancillary equipment. Benzene, ethylbenzene, xylenes, TPH-GRO, TPH-DRO were all non-detect. Additionally, PID readings from the floors of the excavated areas, as well as removed soils ranged from 0 ppm to 9.2 ppm. It is believed that that gas station did not impact subsurface material in the surrounding area based on the analytical results of the confirmation sampling conducted during the closure of the USTs and ancillary equipment. The remaining four environmental database listings are unlikely to impact the LOD as they either have no violations, no releases, or are believed to be located downgradient or crossgradient. Thus, impacts to the LOD are unlikely.</p>

9	7-Eleven 19700 Frederick Rd Germantown, MD	620	<p>FINDS/FRS, ICIS – Minor air permit; no violations were identified during this review.</p> <p>OCP, UST - The gas station is located cross-gradient to the LOD. The gas station has two currently-in-use gasohol USTs (10,000 gallons and 15,000 gallons) that were installed on 9/1/2001.</p> <p>2001 – An OCP case was opened for compliance inspection for the installation of a 10,000-gallon and 15,000-gallon gasoline USTs. No release or cleanup reported. The case The case was closed in March 2002.</p> <p>2004 – A vehicle accident created a fire, burning the dispenser sump and flexible product piping. Soil samples were collected and analyzed for petroleum constituents prior to the damaged equipment being replaced. TPH-GRO was detected at 300 ug/kg and MTBE at 470 ug/kg. Once the equipment had been installed and tested, the case was closed approximately 4 months later.</p> <p>2009 – In May 2009, a vehicle struck a dispenser pump and an unknown amount of gasoline was released. Tank field monitoring pipes were gauged and free product was detected in a tank field. Thus, an enhanced fluid recovery (EFR) event was conducted to remove LPH from the pipe. Following the EFR event, LPH was detected in both tank field monitoring pipes (TF1 and TF2). The pipes were gauged weekly though October 2009 and then monthly. In July 2009, six borings were advanced across site to collect soil and groundwater samples and to delineate the petroleum contamination on-site. The soil sampling results were non-detect or below MDE action levels for petroleum constituents. The groundwater sampling results detected MTBE at a maximum concentration of 1,800 ug/l in SB4, benzene at a maximum concentration of 250 ug/l in SB3, and naphthalene at 33 ug/l in SB3. Approximately 1.07 gallon of free product was has been removed from the tank field via EFR and hand bailing. No LPH have been detected in either monitoring pipe since January 2010. The case received closure in November 2011. Based on the local topography, groundwater is believed to be flowing towards to the northwest, crossgradient of the LOD.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Frederick Road (MD 355), south of the Middlebrook Road, in Germantown, Maryland. The LOD is surrounded by commercial properties. The Germantown East Local Park is located to the north. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944 and commercial development in the surrounding area was observed by 1993 with the development a gas station to the east in 2005 that was demolished in 2015. The LOD and surrounding area are similar to their current configuration by 2017. Eleven environmental database listings were identified in the immediate area of the LOD, including a closed Exxon gas station 330 feet to the northeast (upgradient), 7-Eleven gas station 185 feet to the southwest, and a Sunoco (formerly Amoco) gas station 310 feet further to the southwest (crossgradient). The former Exxon station to the northeast was present up until 2007 when it closed. The facility was demolished and an urgent care facility was constructed in its place around 2015. During the closure of the gas station in April 2007, the three 12,000-gallon gasoline USTs, as well as the ancillary equipment onsite including the product lines, sump/vapor recovery systems, and dispenser islands were excavated and removed from the site. No substantial subsurface impacts were encountered during the removal of the USTs. Only low-level concentrations of toluene and MTBE were detected in soil samples from the excavated areas around the USTs and ancillary equipment. Benzene, ethylbenzene, xylenes, TPH-GRO, TPH-DRO were all non-detect. Additionally, PID readings from the floors of the excavated areas, as well as removed soils ranged from 0 ppm to 9.2 ppm. It is believed that that gas station did not impact subsurface material in the surrounding area based on the analytical results of the confirmation sampling conducted during the closure of the USTs and ancillary equipment. The remaining four environmental database listings are unlikely to impact the LOD as they either have no violations, no releases, or are located downgradient. Based on a review of the two gas stations southwest (crossgradient) of the LOD. Impacted soil and groundwater was previously identified at both sites; however, based on a review of analytical sampling data and</p>

5	7-Eleven/ 19700 Frederick Rd Germantown, MD	265	<p>gasoline USTs. No release or cleanup reported. The case The case was closed in March 2002.</p> <p>2004 – A vehicle accident created a fire, burning the dispenser sump and flexible product piping. Soil samples were collected and analyzed for petroleum constituents prior to the damaged equipment being replaced. TPH-GRO was detected at 300 ug/kg and MTBE at 470 ug/kg. Once the equipment had been installed and tested, the case was closed approximately 4 months later.</p> <p>2009 – In May 2009, a vehicle struck a dispenser pump and an unknown amount of gasoline was released. Tank field monitoring pipes were gauged and free product was detected in a tank field. Thus, an enhanced fluid recovery (EFR) event was conducted to remove LPH from the pipe. Following the EFR event, LPH was detected in both tank field monitoring pipes (TF1 and TF2). The pipes were gauged weekly through October 2009 and then monthly. In July 2009, six borings were advanced across site to collect soil and groundwater samples and to delineate the petroleum contamination on-site. The soil sampling results were non-detect or below MDE action levels for petroleum constituents. The groundwater sampling results detected MTBE at a maximum concentration of 1,800 ug/l in SB4, benzene at a maximum concentration of 250 ug/l in SB3, and naphthalene at 33 ug/l in SB3. Approximately 1.07 gallon of free product was has been removed from the tank field via EFR and hand bailing. No LPH have been detected in either monitoring pipe since January 2010. The case received closure in November 2011. Based on the local topography, groundwater is believed to be flowing towards to the northwest, crossgradient of the LOD.</p>	Low
6	Exxon Gas/ 19825 Frederick Rd Germantown, MD	330	<p>FINDS/FRS, RCRA VSQG – Former RCRA VSQG and minor air permit, no violations.</p> <p>OCP, UST– The gas station had three 12,000-gallon gasoline USTs that were installed on 4/1/1994 and removed from ground on 8/29/2007.</p> <p>1996 - An OCP case was opened due to an issue with the vapor recovery system at the gas station. No indication of a release to the subsurface was identified. The recovery system was repaired and the case was closed in 1998</p> <p>1997– A small leak was observed at one of the gasoline dispensers. The gasoline that was released was contained by the sump system onsite. The leak was repaired and the case was closed four days later.</p> <p>2007 – In April 2007, the gas station closed and all UST, as well as the ancillary equipment onsite including the product</p>	Low

Street Address/Nearest Cross Streets	East side of Frederick Road (MD 355), south of the Middlebrook Road
City	Germantown
County	Montgomery
Type of property	ROW
Ranking Rationale Site Summary	
<p>The LOD is located along the west side of Frederick Road (MD 355), south of the Middlebrook Road, in Germantown, Maryland. The LOD is surrounded by commercial properties. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944 and commercial development in the surrounding area was observed by 1993 with the development a gas station to the east in 2005 that was demolished in 2015. The LOD and surrounding area are similar to their current configuration by 2017. Eleven environmental database listings were identified in the immediate area of the LOD, including a closed Exxon gas station 410 feet to the north (crossgradient), a 7-Eleven gas station 185 feet to the southwest, and a Sunoco (formerly Amoco) gas station 310 feet further to the southwest (crossgradient). The former Exxon station to the northeast was present up until 2007 when it closed. The facility was demolished and an urgent care facility was constructed in its place around 2015. During the closure of the gas station in April 2007, the three 12,000-gallon gasoline USTs, as well as the ancillary equipment onsite including the product lines, sump/vapor recovery systems, and dispenser islands were excavated and removed from the site. No substantial subsurface impacts were encountered during the removal of the USTs. Only low-level concentrations of toluene and MTBE were detected in soil samples from the excavated areas around the USTs and ancillary equipment. Benzene, ethylbenzene, xylenes, TPH-GRO, TPH-DRO were all non-detect. It is believed that that gas station did not impact subsurface material in the surrounding area based on the analytical results of the confirmation sampling conducted during the closure of the USTs and ancillary equipment. The remaining four environmental database listings are unlikely to impact the LOD as they either have no violations, no releases, or are located downgradient. Based on a review of the two gas stations southwest (crossgradient) of the LOD. The 7-Eleven gas station approximately 185 feet to the southeast currently has two gasoline USTs (10,000 gallons and 15,000 gallons) that were installed on 9/1/2001. The Sunoco (formerly Amoco) approximately 310 feet to the southeast.</p>	

Figure Location:

Project Area Site Descriptions

currently has four 10,000 gallon USTs. Impacted soil and groundwater was previously identified at both sites; however, based on a review of analytical sampling data and the groundwater elevation data, impacts are believed to be isolated to the gas station properties or to the southwest of the LOD. Thus, impacts are unlikely.

Ranking Rationale Site Summary		
<p>The LOD is located along the west side N. Frederick Road (MD 355), north of the Christopher Avenue, in Gaithersburg, Maryland. The LOD is located in the western most southbound lane and the vegetated area adjacent of the roadway. The surrounding area is primarily developed with commercial properties. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944. The surrounding area was primarily agricultural land up until the 1960s, when commercial development began. Development continued up until approximately 2005, when the surrounding area was observed to be developed in its current configuration. Nine sites were identified in the environmental database report, near the LOD that include four car dealerships, two automotive shops, and two defense contractor office facilities. There are four OCP cases that are in close proximity to the LOD (three car dealership and the IBM Corporation). Based on a review of available information on these site's and OCP cases provided by MDE through a PIA request, no substantial releases have occurred on the properties, that are believed to have impacted the LOD. The remaining five environmental database listings are unlikely to impact the LOD based on their distance from the LOD.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the east side of N. Frederick Road (MD 355), northwest of Montgomery Village Avenue (MD 124), in Gaithersburg, Maryland. The LOD consists of the easternmost northbound lane and the vegetated area adjacent to the roadway. The LOD is surrounded by commercial properties of the Lakeforest Auto Center. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944. Based on review of the 1959 aerial, the LOD and surrounding areas were residential with agricultural land. Commercial development began by 1981 and continued until 2017 when the LOD and surrounding areas are similar to their current configuration. A Costco warehouse store abuts the LOD to the east and was identified as a RCRA SQG. Although no releases or violations were reported, the facility received an enforcement action in 2014 from a nation-wide compliance evaluation for a refrigerant-related issue. A Ford dealership was identified 560 feet to the northwest (downgradient) with two closed OCP cases. No details were provided for one case other than the open (1987) and closure (1991) dates. The other OCP case is for a compliance inspection in 2000; no releases or cleanup activities were reported. The dealership is also an active RCRA SQG facility with no reported violations. Two additional auto dealerships were identified approximately 375 feet away to the east (crossgradient). Both are RCRA SQG listings with no reported violations or releases. Based on gradient, distance, and/or absence of violations or releases, none of these listings are likely to impact the LOD.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of N. Frederick Road (MD 355), northwest of Montgomery Village Avenue (MD 124), in Gaithersburg, Maryland. The LOD consists of the westernmost southbound lane and the vegetated area adjacent of the roadway. The LOD is surrounded by commercial properties of the Lakeforest Auto Center. Based on review of historical aerial and topographic maps, N. Frederick Road has been present since at least 1944. The LOD and surrounding areas were primarily developed as agricultural land, with some farms and structures intermixed throughout up until approximately 1981, when commercial development began, and continued through 2012, when the surrounding area was observed to be developed similar to its current configuration. Four environmental database listings were identified in the immediate area of the LOD, including three car dealerships and computer company. A Ford dealership was identified approximately 650 feet to the northwest (downgradient) with two closed OCP cases. No details were provided for one case other than the open (1987) and closure (1991) dates. The other OCP case is for a compliance inspection in 2000; no releases or cleanup activities were reported. The dealership is also an active RCRA SQG facility with no reported violations. Two additional auto dealerships were identified approximately 550 feet to the east (cross-gradient). Both are RCRA SQG listings with no reported violations or releases. IBM Corporation is located approximately 640 feet to the west (downgradient) and is listed as having one closed OCP case due to a release from an AST, which was subsequently addressed and closed. The IBM facility also has active ASTs and is a registered SQG with no recorded violations. Based on gradient, distance, case status, and/or absence of violations or releases, none of these listings are likely to impact the LOD.</p>

Ranking Rationale Site Summary		
<p>The LOD is located along the north side of Montgomery Village Avenue, northeast of northbound onramp to I-270, in Gaithersburg, Maryland. The LOD is surrounded by commercial properties. Based on review of historical aerial and topographic maps, Montgomery Village Avenue was an unimproved road in 1944, but was developed along with the interstate by 1959. Commercial development began around 1971 and continue through 1993, when the surrounding area was observed to be developed in its current configuration.. One environmental database listing was identified in the vicinity of the LOD. The Hilton Hotel is located approximately 300 feet to the southeast (crossgradient) with a closed OCP case due to a tank closure in 1998. A release and cleanup were reported. A second small spill (25 gallons) occurred at the hotel in 2015 due to a damaged hose on a trash truck and was cleaned up. Based on the local topography, the site is believed to be crossgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	East side of Montgomery Village Avenue (MD 124), south Russell Avenue	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Montgomery Village Avenue (MD 124), south Russell Avenue, in Gaithersburg, Maryland. The LOD is located in the southern most eastbound lane and the vegetated area adjacent of the roadway. The LOD is surrounded by commercial properties to the north, east, and west and a drainage basin to the south. Based on review of historical aerial and topographic maps, Montgomery Village Avenue was developed by 1971. The surrounding area was observed to be developed in its current configuration around 1993. Four sites of concern were identified in the environmental database report. A PIA request was submitted for further information regarding an office building and a fire station with previous USTs and OCP cases located 330 feet to the northwest (upgradient) and 400 feet to north (crossgradient), respectively. Based on a review of information for the two sites, no substantial petroleum impacts to soil and/or groundwater are believed to be present. Based on the proximity of these sites relative to the LOD, impacts are believed to be unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Montgomery Executive Center 6 Montgomery Village Gaithersburg, MD	330	<p>OCP, UST – The facility has one permanently out-of-use 500 gallon diesel UST that was removed from ground on 6/3/2010. Two soil samples were collected from 2 feet below of the grade of the UST and analyzed for TPH-DRO/GRO, BTEX, and MTBE, all of which were non-detect. Base on the analytical results the case received closure approximately 5 months later. Based on available information, the former UST is believed to be approximately 330 feet northwest (upgradient) of the LOD.</p> <p>HMIRS - Approximately 2 gallons of heating oil were released in a tank overfill incident on 10/28/1997. The spill was contained and cleaned up.</p>	Low
2-3	Fire Department 801 Russell Avenue Gaithersburg, MD	400	<p>OCP, UST – Crossgradient to the LOD. There are six permanently out-of-use USTs at the fire station. The facility currently has a 5,000-gallon aboveground storage tank on the northwest side of the site.</p> <p>1988 – A 1,000-gallon and 5,000-gallon UST were excavated and removed from the site. Monitoring wells were installed, no product, sheen or odor was observed in the wells. The case was closed approximately 3.5 months later.</p> <p>1995 – A 550-gallon diesel and 550-gallon gasoline UST were abandoned in-place due to their location under the fire station.</p> <p>1997 – A 300-gallon waste oil UST was excavated and removed from the site. No impacted soil was encountered during the removal of the UST. The MDE inspector onsite instructed the contractor to backfill the excavation and the case for the two 550-gallon USTs abandoned in place in 1995, along with the 550-gallon waste oil UST were closed by MDE.</p> <p>2015 – A 550-gallon diesel UST was excavated and removed from the site. No evidence of a petroleum release was observed during the removal of the UST. Two soil samples were collected below the grade of the former UST and analyzed for TPH-GRO/DRO and VOCs, which were all non-detect.</p> <p>Based on a review of current and historical imagery, the former USTs are believed to be approximately 400 feet north (crossgradient) of the LOD.</p>	Low
4	Rockville Inn/ 2 Montgomery Village Gaithersburg, MD	485	<p>FINDS/FRS –The hotel is a minor air source; no violations were identified during this review.</p>	Low

Ranking Rationale Site Summary <p>The LOD is located along the central median of Montgomery Village Avenue (MD 124), south of Lake Shore Drive, in Gaithersburg, Maryland. The surrounding area is primarily residential. Based on a review of historical imagery, the LOD and surrounding area were observed to be agricultural through the 1970s. Residential development continued expanding through the early 1990s when the LOD and surrounding area were observed to be developed in their current configuration. One site with a former UST was identified to be approximately 840 feet northwest of the LOD, based on Montgomery County property records. According to available records, the UST was closed in-place in 2001. Based on the local topography, the site is believed to be downgradient of the LOD. Thus, impacts to the LOD are unlikely</p>

Street Address/Nearest Cross Streets	Southeast corner of Midcounty Highway and Goshen Road	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located proximate to the southeast corner of Midcounty Highway (MD 124) and Goshen Road, in Gaithersburg, Maryland. The surrounding area is primarily forested land and residential. Based on a review of historical imagery, the LOD and surrounding area were observed to be agricultural land as early as 1959. Residential development began in the 1970s and continued through the 2000s when the LOD and surrounding area were observed to be developed in their current configuration. No records of concern that would have an impact on the LOD were identified during this environmental review.

Watershed:	WAS	
Street Address/Nearest Cross Streets	Northern side of Midcounty Highway(MD 124), northwest of Woodfield Road	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along northern side of Midcounty Highway (MD 124), northwest of Woodfield Road, in Gaithersburg, Maryland. The surrounding area is primarily residential and forested lands. Based on a review of historical imagery, the LOD and surrounding area were observed to be agricultural through the 1980s when residential development began. Residential development continued through 2005 when the LOD and surrounding area were observed to be developed in their current configuration. One record of concern, an ERNS case associated with illegal dumping, was identified 610 feet north of the LOD. This site is believed to be downgradient of the LOD and is hydraulically separated by a stream (Whetstone Run). Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	Northern side of Midcounty Highway (MD 124), west of Taunton Drive	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located along the northern side of Midcounty Highway (MD 124), west of Taunton Drive, in Gaithersburg, Maryland. The surrounding area is primarily residential. A middle school is located to the southeast. Based on a review of historical imagery, the LOD and surrounding area were observed as agricultural and forested land through the 1970s when residential development began. Residential development continued through 2005 when the LOD and surrounding area were observed to be developed in their current configuration. No records of concern were identified during this environmental review.

Street Address/Nearest Cross Streets	Central median of Midcounty Highway (MD 124), west of Miller Fall Road	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Midcounty Highway (MD 124), west of the intersection with Miller Fall Road, in Gaithersburg, Maryland. The surrounding area is primarily residential, with the exception of the Shady Grove Middle School located immediately south of the LOD. Based on a review of historical imagery, the LOD and surrounding area were observed to be agricultural through the 1970s when residential development began. Residential development continued through 2005 when the LOD and surrounding area were observed to be developed in their current configuration. The adjacent school has an air emissions permit, with compliance activity noted in 2011; however, air emissions will not have an impact on the LOD. A SPILLS record and an OCP case were noted for residential properties located 375 feet and 480 feet southeast of the LOD, respectively. Impacted soils were identified at both residential property; however, both sites are believed to be downgradient of the LOD. Thus, impacts are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	RESIDENCE/ 10 JEREMY CT, DERWOOD, MD, 20855	375	SPILLS – A release of an unknown quantity of No. 2 heating oil was reported on May 29, 2020, associated with a 500-gallon residential heating UST. Further investigation identified impacted soil. The case appears to remain open. Based on the local topography, the site appears to be downgradient of the LOD.	Low
2	SHADY GROVE MIDDLE / 8100 MIDCOUNTY HGWY	480	FINDS/FRS, ICIS – Air permit, enforcement/compliance activity noted in 2011 (ID No. 110019874741).	Low
3	SAMOL SOK/ 7804 JEREMY TERRACE	570	OCP, UST – In October 2010, a residential 500-gallon heating oil UST was excavated and removed from the property. During the removal of the UST, impacted media was identified. The impacted media was addressed and the case was closed on July 2011. Based on the local topography, the site appears to be downgradient of the LOD.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1959	The LOD and surrounding area are observed to be agricultural land, with forested land present to the north.	Aerial
1971	No change to LOD. Residential development is observed to the north and west.	Aerial
2005	Midcounty Highway is visible along with residential development to the north, east and west, and a school to the south. The LOD and surrounding area are observed to be developed in their current configuration.	Aerial

County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of N. Frederick Road (MD 355), northwest of Odendhal Avenue, in Gaithersburg, Maryland. The LOD is surrounded by commercial properties. The Lake Forest Mall is located to the northeast. Based on review of historical aerial and topographic maps, Frederick Road has been present since at least 1944. Commercial development was observed by 1971. The LOD and surrounding areas were observed to developed in their current configuration by 2005. Nine environmental database listings were identified in the immediate area of the LOD. Six of the sites were either gas stations, VCP sites, or had reported release and/or former USTs. A PIA request was submitted to MDE for further information on these sites. Based on a review of available information, the sites were determined to be hydraulically downgradient, crossgradient of the LOD or impacts were believed to be isolated to the site. Thus, it is believed that impacts to the LOD are unlikely.</p>

2, 3 & 4	Gaithersburg Square Shopping Center/ Swift Cleaners/ 472-582 N Frederick Gaithersburg, MD	120	<p>RCRA SQG, FINDS/FRS – The shopping center is a SQG for tetrachloroethylene and spent halogenated solvents. No violations were found; no violations were identified during this review.</p> <p>RCRA VSQG, FINDS/FRS, FED Drycleaners – Downgradient to the LOD. The dry cleaners is a VSQG for spent halogenated solvents. The status as a drycleaners is inactive; no violations were identified during this review.</p> <p>SHWS, VCP, LUC – Abuts the LOD. The site is listed as a Hazardous Waste Program Voluntary Cleanup program for groundwater contamination, opened in 2002. According to a report summarizing a limited subsurface investigation, elevated levels of chlorinated solvents from a former drycleaner, as well as petroleum constituents and additives from an Exxon station on the eastern side of the facility are present above MDE actions levels in the groundwater onsite; however, based on potentiometric maps provided in the report, groundwater is believed to flow to the west/northwest (crossgradient) of the LOD. Additionally, the impacted areas are believed to at least 224 feet south of the LOD. The site received a NFRD from MDE in 2003, with land-use controls on the use of groundwater onsite.</p> <p>Based on the local topography, the site is believed to be crossgradient of the LOD.</p>	Low
5	CVS Pharmacy 546 N Frederick Gaithersburg, MD	220	RCRA LQG, FINDS/FRS – The pharmacy is a LQG for ignitable waste, corrosive waste, silver, and four P-listed wastes; no violations were identified during this review.	Low
6	Hecht CO 491 N Frederick Gaithersburg, MD	235	OCP – In 1999, a 300-gallon diesel UST was excavated and removed from the site. No staining or odors were observed in the excavation. Additionally, the tank was in good condition. A PID reading from the excavation was recorded at 10 ppm. Thus, the MDE inspector onsite instructed the contractor to install a new 550-gallon diesel UST in its place and backfill the excavation. The case was closed approximately 11 months later. Based on the local topography, the site is believed to be crossgradient of the LOD.	Low

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
7	Exxon/ 448 N Frederick Gaithersburg, MD	235	<p>RCRA SQG, FINDS/FRS, ICIS - The gas station is a SQG for ignitable waste and benzene. The station is a permitting minor air source. No violations were identified during this review.</p> <p>OCP, UST –There are five permanently out-of-use USTs removed from ground, and two currently in use 20,000 gallon gasoline and diesel USTs.</p> <p>1989 – A case was opened for well/groundwater contamination. A release and cleanup was reported. Closure was granted on 9/27/2004.</p> <p>2000 - Case opened on 9/25/2000 due to a surface spill (also listed in the SPILLS database) A release and cleanup was reported. Closure was granted on 11/13/2000.</p> <p>2017/2018 to Present – Two OCP cases are currently open at the site. Based on available information provided by MDE through a PIA request, petroleum constituents and additives are present in groundwater onsite and are currently being monitoring through quarterly groundwater sampling from existing groundwater wells. As well as free product is being removed by several skimmer pumps installed in wells across the site. Based on the analytical data, impacts are isolated to the site and areas to the south, southwest, and southeast, downgradient of the LOD.</p>	Low
8	Amoco/ 596 N Frederick, Gaithersburg, MD	315	<p>OCP, UST, FINDS/FRS – This site had seven USTs ranging in size from 550-gallons to 10,000- gallons that were excavated and removed from the ground in 1996. Approximately 175 tons of impacted soil identified onsite, was disposed of offsite; however, a large amount was left onsite. Monitoring wells were installed onsite that identified concentrations of petroleum constituents and additives present onsite. The site was redeveloped and the new structure required soil vapor mitigation system to be installed under the new structure. Once, the system was properly installed, MDE granted closure to the site in 1997. Based on the local topography, the site is believed to be downgradient of the LOD.</p>	Low

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
9	Goodyear Auto/ 457 N Frederick Gaithersburg, MD	335	<p>RCRA SQG, FINDS/FRS – Downgradient to the LOD. The repair facility is a SQG for ignitable waste; no violations were identified during this review.</p> <p>OCP - A closed OCP case was opened on 3/31/1992, due a complaint of poor housekeeping and management of used oil in an AST located adjacent to the structure. MDE observed surficial staining on the pavement and spilling on the AST. The material was address and exterior of the AST cleaned and the case was closed approximately half a month later. Based on the available information, impacts at the site appear to be mostly surficial in nature.</p>	Low
10	Shell 455 N Frederick Gaithersburg, MD	435	<p>FINDS/FRS, ICIS, RCRA NonGen –The station no longer generates waste; no violations were identified during this review.</p> <p>OCP, UST - The station has five permanently out-of-use USTs. The following OCP cases files were listed:</p> <p>1991 – A 1,000-gallon heating oil UST was excavated and removed from the site. No release or impacted soil was noted in the</p> <p>1994 – A case was opened for a compliance inspection that. No release was identified and the case was closed in 1995.</p> <p>2003 – A site assessment of the facility identified elevated levels of petroleum constituents and additives in soil and groundwater at the site. A total of 6 monitoring wells were installed and sampled several times. The site is believed to be upgradient of the LOD. Based on the analytical results, impacts appear to be isolated to the site, as the analytical results from the monitoring well on the western end of the site was non-detect for analytes with the exception of a detection of chloroform. MDE granted closure to the site in 2008 and the monitoring wells were abandoned.</p> <p>2015 – A 1,000-gallon used oil UST that was abandoned in-place was excavated and removed, along with approximately 30 tons of impacted soil and disposed of offsite. There were no obvious perforations observed in the 19 year old UST or in its associated piping. Based upon field screening results and the absence of significant petroleum impact, soils were returned to the excavation. Two soil samples were collected at approximately 8 feet bgs to evaluate the presence/absence of residual petroleum impact. The post excavation soil sample results were below Department non-residential cleanup standards. The case received closure in 2016.</p>	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the west side of N. Frederick Road (MD 355), south of Odendhal Avenue, in Gaithersburg, Maryland. The LOD is surrounded by commercial properties. The Lake Forest Mall is located to the northeast. Based on review of historical aerial and topographic maps, Frederick Road has been present since at least 1944. Commercial development was observed by 1971. The LOD and surrounding areas are similar to their current configuration by 2005. Eleven environmental database listings were identified in the immediate area of the LOD. Seven of the sites were either gas stations, VCP sites, or had reported release and/or former USTs. A PIA request was submitted to MDE for further information on these sites. Based on a review of available information, the sites were determined to be hydraulically downgradient, crossgradient of the LOD or impacts were believed to be isolated to the site. However, the LOD abuts a gas station located directly to the south that has an open OCP related to dissolved and free phase product present in groundwater at the site that is currently being addressed by skimmer pumps, as well as being monitored by quarterly sampling. Based on the proximity of the gas station to the LOD, impacts to the LOD cannot be completely ruled out. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

9	Beahm's Auto Park 443 N Frederick Gaithersburg, MD	430	OCP – Case opened 5/6/1995 for well/groundwater contamination. A release was reported. Closure was granted on 4/18/1997. Based on the local topography, the site is believed to be crossgradient of the LOD.	Low
10	Pollo 430 N Frederick Gaithersburg, MD	485	FINDS/FRS – Crossgradient to the LOD. This site is in the FINDS database for having an air permit; no violations were identified during this review.	Low
11	CVS Pharmacy 546 N Frederick Gaithersburg, MD	520	RCRA LQG, FINDS/FRS – Crossgradient to the LOD. The pharmacy is a LQG for ignitable waste, corrosive waste, silver, and four P-listed wastes; no violations were identified during this review.	Low
12	Hecht Co 491 N Frederick Gaithersburg, MD	555	OCP – In 1999, a 300-gallon diesel UST was excavated and removed from the site. No staining or odors were observed in the excavation. Additionally, the tank was in good condition. A PID reading from the excavation was recorded at 10 ppm. Thus, the MDE inspector onsite instructed the contractor to install a new 550-gallon diesel UST in its place and backfill the excavation. The case was closed approximately 11 months later. Based on the local topography, the site is believed to be crossgradient of the LOD.	Low
13	Amoco 596 N Frederick Gaithersburg, MD	620	OCP, UST, FINDS/FRS – This site had seven USTs ranging in size from 550-gallons to 10,000- gallons that were excavated and removed from the ground in 1996. Approximately 175 tons of impacted soil identified onsite, was disposed of offsite; however, a large amount was left onsite. Monitoring wells were installed onsite that identified concentrations of petroleum constituents and additives present onsite. The site was redeveloped and the new structure required soil vapor mitigation system to be installed under the new structure. Once, the system was properly installed, MDE granted closure to the site in 1997. Based on the local topography, the site is believed to be downgradient of the LOD.	Low

HISTORICAL IMAGES SUMMARY		
Date Range	Property Use	Source
1944	Frederick Road is observed to be present. Residential development is observe to the south/southeast of the LOD.	Topo

Street Address/Nearest Cross Streets	West side of N. Frederick Road (MD 355), south of Montgomery Avenue	
City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of N. Frederick Road (MD 355), south of Montgomery Avenue in Gaithersburg, Maryland. The LOD is surrounded by commercial properties to the north, south, and east and a cemetery to the west. The Lake Forest Mall is located to the north. Based on review of historical aerial and topographic maps, Frederick Road has been present since at least 1944. Commercial development was observed by 1971. The LOD and surrounding areas are similar to their current configuration by 1993. Eleven environmental database listings were identified in the immediate area of the LOD. Nine of these listings likely have no impact on the LOD based on no releases, no violations, or distance. The remaining two sites include a gas station approximately 225 feet downgradient of the LOD, as well as a Midas tire shop approximately 500 feet upgradient of the LOD. Based on a review of available information on the two sites provided by MDE through a PIA request, no substantial releases have occurred at either site and are not believed to have impacted the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2	Sire Speedy Printing 300 Frederick Rd Gaithersburg, MD	135	RCRA SQG, FINDS/FRS – The shop is a SQG for silver; no violations were identified during this review.	Low
3	274 Frederick Rd Gaithersburg, MD	145	SPILLS – A truck had a ruptured saddle tank that released approximately 50 gallons of diesel on 5/21/2016. The truck was towed away. Based on the local topography, the site is believed to be upgradient of the LOD.	Low
4	Rt 355 & Maryland Gaithersburg, MD	225	OCP – A OCP case was opened on 5/8/1996 due to a surficial spill. The released material was addressed and the case was closed approximately 6 months later. Based on the local topography, the site is believed to be upgradient of the LOD.	Low
5	Old Country Buffet 240 Frederick Rd Gaithersburg, MD	245	FINDS/FRS – Listed in the MD-TEMPO database as a registered cafeteria; no violations were identified during this review.	Low
6	Exxon/ 408 Frederick Rd Gaithersburg, MD	290	<p>FINDS/FRS, ICIS – The station has a minor air source permit; no violations were identified during this review.</p> <p>OCP, UST – The gas station has four currently-in-use USTs ranging in size from 8,000 to 12,000 gallons of gasoline and diesel installed on 5/1/1982. A used oil UST was removed from ground on 8/8/1997. The following OCP cases were listed:</p> <p>1991 – An OCP case was opened due to a surficial release of approximately 75 gallons of gasoline. Absorbent material was deployed on the release and cleaned up. The case was recommended for closure the next day; however, MDE did not grant closure until 1995.</p> <p>1994 – An OCP case was opened for a compliance inspection. Several deficiencies were noted, none of which resulted in a release were addressed and the case was closed in 1997.</p> <p>1997 – A 1,000-gallon used oil UST was excavated and removed from the site. No odors or staining were observed in the excavation or soils removed. PID readings were 0.0 below the grade of the tank. Therefore, the MDE inspector onsite instructed the onsite contractor to backfill the excavation and the case was closed approximately four months later.</p> <p>Based on the local topography, the gas station is believed to be downgradient of the LOD.</p>	Low
7	Sherwin-Williams 260 Frederick Rd Gaithersburg, MD	390	FINDS/FRS, RCRA VSQG – The site is a hazardous waste generator for ignitable waste; no violations were identified during this review.	Low

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	Southwest corner of Darnestown Road (MD 28) and Turkey Foot Road	
City	Gaithersburg	
County	Montgomery	
Type of property	Private	
Ranking Rationale Site Summary		
<p>The LOD is an open field located at the southwest corner of the intersection of Darnestown Road (MD 28) and Turkey Foot Road, in Gaithersburg, Maryland. The surrounding area can be classified as a semi-rural suburban area. Residential houses and open space adjoin the property to the north, east, and west. A church, followed by a school, are observed to the south the LOD, beyond Darnestown Road. The surrounding area to the east and southeast were observed to be developed with residential and commercial properties as early as 1968. Residential and commercial development continued through 2018 when the LOD and surrounding area was observed to be developed in its current configuration. No records of concern that would have an impact on the LOD were identified during this environmental review; however, review of historical topographic maps identified an underground petroleum pipeline running north to south directly west of the LOD. Review of the National Pipeline Mapping System confirmed a pipeline to be present. The pipeline is likely buried 3 to 6 feet below grade surface. No releases associated with the pipeline have been reported in the immediate vicinity of the LOD; however, due the proximity of this pipeline to the LOD. Thus, further investigation is warranted prior to intrusive groundwork to determine if environmental media within the LOD have been impacted.</p>

Street Address/Nearest Cross Streets	South side of Darnestown Road (MD 28), west of Edin Rock Court	
City	Germantown	
County	Montgomery	
Type of property	ROW/Private	
Ranking Rationale Site Summary		
<p>The LOD is located along the south side of Darnestown Road (MD 28), west of Edin Rock Court, in Germantown, Maryland. Residential properties are located to the north and west. A church/private school are located to the southwest. Commercial properties, including a drycleaner, commercial businesses, bank, and grocery store, are located to the southeast. The surrounding area to the north, west, and south were primarily developed as agricultural land from the early 1900s up until the 1960s. The area to the east has been developed since the early 1900s, and both residential and commercial development has continued through present day. A closed LRP dry-cleaning site is located approximately 533 feet east (cross-gradient) of the LOD, as well as several other sites with closed OCP cases and petroleum spills between 535 feet to 1,610 feet south and southeast of the LOD. Based on local topography, these sites appears to be either crossgradient or downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2 & 4	Secco Cleaners 14100 A /14105 Darnestown Rd Germantown MD 20874	533	SHWS, RCRA CESQG, FINDS/FRS, DRYCLEANERS, FED DRYCLEANERS, ICIS - The site is an active dry-cleaning facility. The site was listed as a very small quantity generator of spent halogenated solvents (dry-cleaning agents) and had an active minor air emissions permit. The site was also inputted into the MDE land restoration program (LRP) site (BM# MD1892) in 2017. According to available records, personnel from the LRP reviewed the environmental reports provided by the owner for the site and issued a Review of Reports (comfort) letter to the owner dated 02/22/17. The case is listed as closed and has been archived. Based on the local topography, the site appears to be crossgradient of the LOD.	Low
2	14100 DARNESTOWN ROAD AT THE 612 CONVENIENCE, STORE ROCKVILLE MD	533	ERNS - A Troxler gauge containing radioactive material was found next to a dumpster. No material was reported to be released from the gauge. The item was removed from the site and disposed of properly.	Low
3	STATE ROAD COMMISSION ROUTE 28 & ROUTE 112	535	UST, OCP – A 550-gallon motor oil/lubricant-containing UST was excavated and removed from the ground in 2004. There was no release identified in connection with the UST. The case received closure in 2005.	Low
5	Adrein's Market 14125 Seneca Rd	790	OCP - The site is associated with a UST of unknown size that contained motor oil/lubricant. The records state that a release occurred and was remediated. The case was opened on 9/2/1998 and closed on 10/14/1998. Based on further review, the site is actually approximately 755 feet southeast (crossgradient) of the site, not 555 feet as the ERIS report stated.	Low
6,7	Archdiocese Of Washington (Mary Of Nazareth School), Windsor School 14131 Seneca Rd	490 to 1610	OCP. The site is currently a church/school. The church is approximately 490 feet south of the LOD, while the school campus is approximately 1610 feet southwest of the LOD, not 623 feet as the ERIS report stated. Several OCP, UST closure/removals, and heating oil spill are associated with this property; however, based on the local topography, the site is cross-gradient of the LOD, therefore, impacts are low. 1994 - One 300-gallon diesel UST and one 300-gallon gasoline UST (both installed in 1961) were excavated and removed from the ground in 1994 and Oil Control Program (OCP) case was opened but does not state if there was a release or remediation effort. The case was closed 3 months after it was opened. 1995 - Another OCP case was opened in 1995 in regard to a spill of heating oil, which was closed in 1999. The site was also listed in the ICIS, FINDS/FRS database. Based on the local topography, the site is cross-gradient of the LOD, therefore, impacts are unlikely. 2012 – A 1,000-gallon heating oil (diesel #2) UST was excavated and removed from the site. No records of a release were associated with the UST were identified.	Low

Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Darnestown Road (MD 28), between Argosy Drive/Dufief Mill Road and Muddy Branch Road, in Gaithersburg, Maryland. Residential properties surround the site to the north and east. A large farm is located to the west of the LOD. A medical center and old repurposed barn are located directly south of the LOD, followed by additional residential properties. Based on historical imagery, the surrounding area was primarily developed as agricultural properties up until the 1970s, with the golf course to the north and residential properties to the west, north, and south constructed in the early 1980s. By 2009, the surrounding area and LOD were observed to be developed in their current configuration. A former military radar site was located approximately 1,050 feet north (upgradient) of the LOD. According to available information, the site was decommissioned in the 1980s and was repurposed by the US Consumer Product Safety Commission. Currently, Montgomery County is proposing to redevelop the site into a public park.. Based on available information provided by MDE through a PIA request, as well as on the MDE LRP website, several USTs have been excavated and removed from the site over the years. No known environmental impacts are known to be present onsite. Thus, impacts to the LOD are unlikely.</p>

1	Barbara 'Connell Residence 10905 Citreon Ct	625	OCP – An OCP case was opened for the property in December 2014 and closed three months later in February 2015. No information on the type of release or amount was provided. The site is believed to be upgradient of the LOD; however, it is separated by a stream running east to west.	Low
116	Rockville - Control 10901 Darnstown Rd; GSA Consumer Product Safety Comm 10901 Darnestown Rd Adm Bldg B	1050	CERCLIS-NFRAP, SEMS-ARCHIVE, FINDS, RCRA-CESQG, RCRA-SQG FINDS/FRS, LRP, UST, FUDS, OCP – a military radar site was located approximately 1,050 feet north of the LOD. The site was decommissioned in the 1980s and was repurposed by the US Consumer Product Safety Commission.. Based on available information provided by MDE, a 1,500-gallon heating oil UST was excavated and removed from the site in 1992, two 1,000-gallon heating oil USTs were excavated and removed from the site in 1993, and a 10,000-gallon heating oil UST was excavated from the site in 2015. PID readings and/or confirmation soil samples were collected from the soil interval below the grade of the former USTs that indicated no substantial petroleum impacts were present onsite. Additionally, available online records from MDE Land Restoration Program state that no known contaminants are known to be present in the soil and groundwater onsite. The site is most likely tracked by MDE LRP, since it is a Formerly Utilized Defense Site (FUDS). Montgomery County is currently looking to repurpose the site into a public park.	Low

Ranking Rationale Site Summary		
<p>The LOD located within the median at the intersection of Seneca Road (MD 112) and Esworthy Road, in Germantown, Maryland. The surrounding area is primarily suburban, with private residences on large tracts of land abutting the LOD on a four sides. The surrounding area was developed with agricultural properties up until the late 1970s, when residential development began to occur. Residential development continued up until 2005, when the LOD and surrounding area were observed to be developed in their current configuration. A residential heating oil UST of unknown size was excavated and removed from a property approximately 470 feet to the southeast (downgradient) of the LOD in 2018. A release was reported, material was cleaned up, and the site received closure approximately 3 months later. Based on local topography, the site is believed to be downgradient of the LOD. A second OCP case was opened in January 1997 at property approximately 725 feet southwest (crossgradient) of the LOD, related to a ground seep investigation. The release was reportedly address and received closure from MDE in June 1997. A spill case opened for a release of approximately 12 ounces of heating oil at a property approximately 565 feet south of the LOD. Based on the distances of the sites relative to the LOD, impacts are unlikely.</p>

Street Address/Nearest Cross Streets	West side of Seneca Road (MD 112), south of River Road	
City	Darnestown	
County	Montgomery	
Type of property	Vacant	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Seneca Road (MD 112), south of River Road, in Darnestown, Maryland. Residential structures on large tracts of land abut the LOD to the north, east, and south. A golf course, constructed in the late 1960s, abuts the LOD to the west. The surrounding area was primarily agricultural land up until the late 1960s/ early 1970s, when residential development began to occur. By 2005, the LOD and surrounding area were observed to be developed in their current configuration. No records of concern were identified in the vicinity of the LOD during this environmental review.</p>

Street Address/Nearest Cross Streets	North side of River Road (MD 190), east of Watkins View Lane	
City	Potomac	
County	Montgomery	
Type of property	ROW/private	
Ranking Rationale Site Summary		
<p>The LOD is located along the north side of River Road (MD 190), east of Watkins View Lane, in Potomac, Maryland. Residential houses are located to the southeast. Residential development is observed to begin in the 1960s and continue through 2013, when the surrounding area was observed to be developed in its current configuration. Two database listings were identified in the surrounding area. In 1994, a 2000-gallon heating oil UST was closed in place at a residential property approximately 225 feet south of the LOD. Available records did not indicate whether a release occurred and/or clean-up/remediation was required. An active 2,000-gallon heating oil UST is present at a residence approximately 655 feet to the southeast of the LOD. No records associated with releases or cleanup in connection with the UST were identified. Base on the local topography, both sites are believed to be downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	North side of River Road (MD 190), west of Lake Potomac Drive	
City	Potomac	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the north side of River Road (MD 190), directly west of Lake Potomac Drive, in Potomac Maryland. The surrounding area is semi-rural/suburban area Residential properties built between 1981 and 1988 on moderate size lot are to the north, east, west. The WSSC Potomac Filtration Plant is located approximately 200 feet south of the LOD, built prior to 1959 and has been expanded multiple times. There have been 27 reported spills that range in size from 1 gallon to an unknown amount, ranging from wastewater to water treatment chemicals. There are 7 USTs registered at the property, 6 of which are permanently out of use and 1 currently in use. Based on local topography, the LOD is potentially downgradient from the site. Based on a review of MDE files provided through a PIA request, five 20,000-gallon ferric chloride USTs were excavated and removed for off-site disposal in 1994. No corrective action was required based on site observation and analytical data, and MDE closed case #94-2858 MO-2. Other records reviewed included a spill report for the release of 2 gallons of oil inside a container in 2017, as well as several third party UST inspections and associated MDE correspondence. Based on the lack of documentation related to the closure of the 1,000-gallon gasoline UST, as well the majority of the spills at the facility, the facility's proximity, and its potential upgradient proximity relative to the LOD, there is a potential for impacts to the LOD.</p>

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	WSSC – Potomac WFP 12200 River Road	240	<p>ERNS – In 1996, an AST containing hydrofluosilicic acid was overfilled, spilling 400 gallons onto soil and asphalt. The leak was secured.</p> <p>HMIRS – In 2016, there were 2 incidents, in which 15 gallons and 0.25 gallons, respectively, of sulfuric acid leaked during unloading of trailers. In 2010, there were 3 separate incidents in which 0.5 gallons, 0.0625 gallons, and 1 gallon, respectively, of sulfuric acid leaked during unloading of trailers.</p> <p>OCP – There have been three OCP cases, which have all been closed. There were no indications as to whether releases and cleanups occurred.</p> <p>RCRA CESQG – Facility is a generator of D001 (ignitable waste), D039 (tetrachloroethylene), F003 (spent nonhalogenated solvents). Current VSQG, former LQG. In 2005, a compliance evaluation inspection was performed onsite. No violations were found</p> <p>SPILLS – There have been 27 reported spills that range in size from 1 gallon to an unknown amount. The spills ranged from wastewater to water treatment chemicals. Spills events resulted from emergency maintenance conditions, missed sampling events, chlorine exceedance, etc.</p> <p>UST – There are seven (7) USTs, six (6) are permanently out of service (one (1) 1,000-gallon gasoline and five (5) 20,000-gallon hazardous substance tanks), one (1) 4,000-gallon gasohol tank currently in use</p> <p>Based on the local topography, the site is potentially upgradient of the LOD.</p>	High

Street Address/Nearest Cross Streets	South side of River Road (MD 190), southwest of Travilah Road/Rivers Edge Drive	
City	Potomac	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the south side of River Road (MD 190), southwest of Travilah Road/Rivers Edge Drive, in Potomac, Maryland. The surrounding area is considered semi-rural/suburban. A housing complex is located to the southwest of the LOD. Several residential houses and open space surround the property to the north, south, and east. Residential development is observed to have begun around 1981 and continued through 1994, when the LOD and surrounding area were observed to be developed in their current configuration. An OCP case associated with a leaking 1,000-gallon heating oil UST at residential property is approximately 200 feet north of the LOD. Based on case documents provided by MDE, the UST was found to be leaking in 2014. Subsequently, the UST and approximately 40 tons of petroleum impacted soil were excavated and removed from the site in 2015. Additional investigations were conducted that included soil boring sampling and monitoring well installation. Free product up to 3.5 feet thick was identified in several of the monitoring wells as well as the residence's drinking water well. Thus, remediation was conducted that included several rounds of pumping out free product through, when the monitoring wells were abandoned with permission from MDE in 2016. Based on site investigation reports reviewed, the impacted area is isolated to the immediately southeast of the residence, northeast of the LOD, and is believed to not extend near or into the boundaries of the LOD. The case is still open, as MDE has requested that surrounding residence's drinking water wells be tested for the presence of petroleum constituents. Based on the information summarized above, impacts to the LOD unlikely.</p>

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along River Road (MD 190), east of Daruish Lane in Potomac, Maryland. The surrounding area was primarily developed as agricultural land up until 1981, when residential development began to occur. Residential development continued through 2006, when the surrounding area was observed to be developed in its current configuration. Two sites with former or current UST were identified in the vicinity of the LOD. In 2007, an OCP case was opened during a residential heating oil tank closure at a property approximately 325 feet to the north of LOD. Impacted material was encountered during the removal of the UST, which was addressed and the case received closure from MDE approximately 3 months later. The second site of concern is associated with a residential property with a 3,000-gallon residential heating oil UST (installed in 1980) currently in use. The UST is located over 500 feet north of the LOD. Based on local topography both sites are believed to be downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	West side of River Road (MD 190), northwest of Potomac Manors Drive	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of River Road (MD 190), northwest of Potomac Manors Drive, in Rockville, Maryland. The surrounding area is primarily residential, with a school to the northeast and commercial development further to the southeast. Residential development is observed to begin prior to 1964 and continued through 2005, when the surrounding area is observed to be developed in its current configuration. A school located 185 feet from the LOD had a 10,000-gallon heating oil UST excavated and removed from the site in July 1995. Based on available records provided by MDE, after the UST had been removed from the ground, the soil interval below the grade of the bottom of the UST was checked for volatile organic compounds using a PID by an inspector from MDE. Readings ranged from 1 ppm to 28 ppm. Based on the PID readings, the inspector instructed the UST removal contractor to backfill the excavation and the case was officially closed approximately 2 months later. The school is also listed as having a RCRA permit; however, records state that the school has no current or previous violations associated with the handling and disposals of hazardous waste. All other sites with environmental concerns are believed to be located at least 480 feet crossgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

LOD ID: WAS-4652	Site Rank: High	Figure Location: 
Quadrant:	NW	
Watershed:	WAS	
Street Address/Nearest Cross Streets	North of the intersection of River Road (MD 190) and Persimmon Tree Road	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located to the north of the intersection of River Road (MD 190) and Persimmons Tree Road, in Rockville, Maryland. The surrounding area is primarily residential with some commercial development in the surrounding area. Residential development is observed to begin by 1964 and continued through 2005, when the surrounding area was observed to be developed in its current configuration. There have been three OCP cases and two SPILLS cases in the surrounding area. One OCP case, abutting the LOD, was opened during a residential heating oil tank closure approximately 85 feet south of the LOD. The UST along with approximately 24 tons of impacted soil were excavated from the site and disposed of at a regulated facility. Two confirmation samples were collected from the excavation and analyzed for TPH-DRO/GRO and VOCs. Detected concentrations of naphthalene (42.7mg/kg) and TPH-DRO (9,800 mg/kg) in the sample collected from the western end of the excavation, exceeded MDE's corresponding soil cleanup standards of 3.8 mg/kg (naphthalene) and 230 mg/kg (TPH-DRO), respectively. MDE allowed for the remaining impacted soil to be left in-place and the case was closed. The second case is associated with a residential property approximately 40 feet to 175 feet northwest of the LOD. The case is related to a leaking heating oil UST that was leaching oil into the basement of the residence in 1990. The UST was removed and over a 1,000 gallons of petroleum impacted groundwater were collected and disposed offsite from 1991 to 1992. The case was closed after air samples were collected from the basement indicated that risk was present. No analytical data or information pertaining to efforts to characterize subsurface soil and groundwater were provided in the files reviewed; therefore, residual concentrations of petroleum constituents could be present on the property, as well as within the boundaries LOD, as the site is believed to be upgradient. Based on in the information summarized above of these two sites in close proximity to the LOD, further investigation maybe warranted prior to any intrusive groundwork to determine whether or not impacted material is present within the boundaries of the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	Able Gerpe Residence 9601 Persimmons Tree Road Potomac, Md	25	OCP – In March 2012, a 550-gallon residential heating oil was excavated and removed from the site approximately 85 feet of the LOD. Perforations were observed in the walls of the UST after it had been removed from the excavation. Elevated PIDs were recorded in the soils below the UST at 203 ppm. Oil was observed to have infiltrated the concrete wall of the adjoining basement; however, no petroleum was observed in the residence's sump. The former location of the UST was over-excavated to the depth of 12 feet bgs (6 ft below the grade of the bottom of the UST) and approximately 24 tons of soil was disposed of offsite at a regulated facility. Two confirmation samples were collected from the excavation and analyzed for TPH-DRO/GRO and VOCs. Detected concentrations of naphthalene (42.7mg/kg) and TPH-DRO (9,800 mg/kg) in the sample collected from the western end of the excavation, exceeded MDE's corresponding soil cleanup standards of 3.8 mg/kg (naphthalene) and 230 mg/kg (TPH-DRO), respectively. The wall of the basement was sealed with plastic poly and tar, the excavation was then backfilled and the case received closure from MDE, approximately two months later since water to the residence was provided by the local municipality and it was believed that there were no current pathways of exposure. Based on the information summarized above, impacts may be present within the boundaries of the LOD.	High

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2	Embassy of Ecuador 9713 River Road Potomac, Md	40	OCP – In 1990, an OCP case was opened due to a report that oil was seeping through the walls and foundation of the residence's basement. In June 1991, the UST was excavated and removed, along with 1,050-gallons of oil water from the sump and drains of the basement between June 1991 and February 1992. The residence was tested using a 5-gas meter for concentrations of benzene, toluene, xylenes, petroleum distillates, as well as upper- and lower-range petroleum hydrocarbons, which were all reported as negative even though a slight odor was noted during the test. According to the closure letter, MDE granted closure to the site and recommended that basement walls be steamed cleaned. No analytical data or information pertaining to efforts to characterize subsurface soil and groundwater were provided in the files reviewed; therefore, residual concentrations of petroleum constituents could be present on the property, as well as within the boundaries LOD, as the site is believed to be upgradient. Based on the information summarized above, impacts may be present within the boundaries of the LOD.	High
3	Suzana Soza/ 9708 Sotweed Road Potomac, Md	265	OCP – In 1993, an OCP case was opened. The case was closed within a year. It is unknown whether any releases or cleanup actions occurred. Based on local topography the site is believed to be crossgradient of the LOD.	Low
4	Residence/ 9609 Sotweed Road Potomac, Md	390	SPILLS – There have been two spills at this residence. Both spills, one in 2014 and one in 2018, involved the release of one gallon of residential heating oil. Cleanup actions were taken following both releases. Based on local topography the site is believed to be downgradient of the LOD.	Low

Ranking Rationale Site Summary		
The LOD is located along the north side of River Road (MD 190), immediately east of Newbridge Drive, in Rockville, Maryland. The surrounding area is primarily residential. Residential development is observed to begin prior to 1964 and continued through 2005, when the surrounding area was observed to be developed in its current configuration. No records of concern that would have an impact on the LOD were identified during this environmental review.

Street Address/Nearest Cross Streets	East side of Falls Road (MD 189), north of Winterset Drive	
City	Rockville	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the east side of Falls Road (MD 189), north of Winterset Drive, in Rockville, Maryland. The surrounding area is primarily residential developments. The surrounding area was primarily observed to be developed with agricultural properties up until the early 1970s, when residential development began to occur. Residential development continued in directions of the LOD up until approximately 2018, when the surrounding area was observed to be developed in its current configuration. A church located 485 feet of the LOD had one 4,000-gallon UST removed in 1997 and new 4,000-gallon UST was installed in its place. No impacted material was encountered during the closure of the former UST. A residential property located approximately 430 feet to the southeast had a residential heating oil UST excavated and removed from property in 1999. According to available records, impacted material was encountered and cleaned-up/ remediated. The case was closed 16 months later. Based on local topography, both sites are believed to be downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	West side Germantown Road (MD 118), south of Brookmead Drive	
City	Germantown	
County	Montgomery	
Type of property	LOD	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side Germantown Road (MD 118), south of Brookmead Drive, in Germantown, Maryland. Residential structures on medium tracts of land surround the LOD. Based on historical imagery, the surrounding area appeared to be primarily agricultural up until the early 1980s, when residential development began to occur. Residential development continued through 2005, when the surrounding area was observed to be developed in its current configuration. One spill case resulting in the release of less than a gallon of heating oil occurred at a residence approximately 335 feet west of the LOD in 1994. The material was contained and cleaned up. An OCP case was opened at a private residence approximately 250 feet southwest of the LOD due to release from a residential heating oil AST. The material was cleaned-up/remediated and the case was closed approximately 5 months later. Both of these sites summarized above are believed to be downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

Street Address/Nearest Cross Streets	West side of Germantown Road (MD 118), south of Richter Farm Road	
City	Germantown	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the west side of Germantown Road (MD 118), south of Richter Farm Road, in Germantown, Maryland. Residential structures on small tracts of land are observed in all directions of the LOD. A high school is located further to the east. Based on historical imagery, the surrounding area was primarily developed with agricultural properties until the early 1980s, when residential development began. Residential development continued through 2005, when the surrounding area was observed to be developed in its current configuration. A SPILLS case related to a sewage release of approximately 2-gallons was listed approximately 450 feet southwest of the LOD. An OCP case related to release of heating oil associated with a heating oil AST in 2003 at residential property was listed approximately 525 feet southwest of the LOD. The release was cleaned up/ remediated and the case was closed two days later. Both sites are believed to be crossgradient of the LOD. Thus, impacts are unlikely.</p>

Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the central median of Quince Orchard Road (MD 124), south of Pawnee Drive, in Gaithersburg, Maryland. Based on historical imagery, the surrounding area was primarily developed with agricultural properties until the early 1980s, when residential development began. Residential development continued through 2005, when the surrounding area was observed to be developed in its current configuration. A residential heating oil UST was excavated and removed from a property approximately 210 feet to the west of the LOD in July 1997. Impacted material was encountered during the removal of the UST, which was addressed and the case received closure approximately 5 month later. Based on the local topography, the site is believed to be downgradient of the LOD. One spill case associated with the release of less than gallon of hydraulic fluid was identified approximately 150 feet from the LOD. Two OCP cases were identified between 440 and 470 feet south of the LOD. Based on the local topography, the sites are believed to be either crossgradient or downgradient of the LOD. Thus, impacts to the LOD are unlikely.</p>

City	Gaithersburg	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
<p>The LOD is located along the side of Darnestown Road (MD 28), east of Quince Orchard Drive (MD 124), in Gaithersburg, Maryland. Commercial structures are located to the north, south, and west of the LOD. The MCFR Fire Station 31 is located to the south. Potomac Garden Center is located to the east. Rachel Carson Elementary School is located to the northeast. Residential properties are located beyond in all directions. Based on a review of historical imagery, the surrounding area appeared to be primarily agricultural land agricultural, up until the early 1980s when commercial development began. By 2005, the LOD and surrounding area appeared to be developed in its current configuration. Five environmental database listings were identified in the immediate area of the LOD. A current nursery had two UST removed from the site at least 265 feet southeast (downgradient) of the LOD. No substantial impacts were encountered. Fire station located directly south of the LOD had thee UST removed from the site between 2010 and 2014. No impacted soil was encountered during the removal of the USTs. A drycleaner is located approximately 550 feet northwest of the LOD, there have been no reported violations associated with the facility. Additionally, two gas stations are located between 530 and 570 feet west/northwest of the LOD. Both are known to have impacted soil and groundwater onsite; however, both sites area believed to be crossgradient of the LOD, based on the local topography. Thus, impacts to the LOD are unlikely, based on the downgradient and crossgradient proximity of these sites, relative to the LOD.</p>

DATABASE SEARCH LISTINGS				
ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
1	MO County Fire Dept 12100 Darnestown Rd Gaithersburg MD 20878	100	<p>OCP, UST – The fire station had 3 USTs installed on 4/1/1990 that were removed from ground on 3/15/2010 (1 UST) and 4/23/2014 (2 USTs) and are permanently out of use.</p> <p>1989 – A OCP case was opened for a compliance violation and did not result in a release. The issue was resolved the case was closed.</p> <p>2010 – A 550-gallon used oil UST was excavated and removed from the site. No impacted soil was encountered. Two confirmation soil samples were collected from the bottom of the excavation and analyzed for BTEX, TPH, and VOCs, all of which were non-detect. The case received closure approximately 1-month later.</p> <p>2014 – Two 3,000-gallon diesel USTs along with their ancillary piping and equipment were excavated and removed from the site. Two confirmation samples were collected from the bottom of each tank excavation and analyzed for TPH-DRO/GRO and VOCs, which were all non-detect.</p> <p>Spills – Approximately 1-2 gallons of gasoline was released, which was addressed.</p> <p>Based on the local topography, the site is believed to be downgradient of LOD.</p>	Low

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
2	Dede's Diner/ Potomac Garden Center 12024 Darnestown Rd Gaithersburg MD 20878	265	<p>OCP, UST – This site is currently a garden center and was formerly occupied by a restaurant.</p> <p>1999 – An OCP case was opened for a release of motor/lube oil from an AST. The material was addressed and the case was closed one month later.</p> <p>2001 – A 550-gallon heating oil UST was excavated and removed from the site. A PID reading of 80 ppm was recorded from the soils in the bottom of the excavation. The MDE inspector requested that the impacted soil (amount unknown) be disposed of offsite and the excavation backfilled. It believed that the UST was located next to a former structure in the northeast portion of the site.</p> <p>2019 – A 3,000-gallon diesel UST was discovered during the installation of a storm drain at the site. Impacted material was excavated and removed from the excavation. PID readings from the bottom of the pit were recorded at 50 ppm and 6.5 ppm. Two confirmation soil samples were collected at a depth of approximately 14 feet bgs and analyzed for VOCs, TPH-DRO/GRO. A nearby supply well is located approximately 35 feet from the UST that was also sampled; however, there no analytical data was provided for the samples. The case is still currently pending closure and the exact location of the UST is also unknown based on the information provided.</p> <p>Based on a review of the historical imagery, any UST would be at 265 feet southeast (crossgradient) of the LOD.</p>	Low
3	Potomac Valley Cleaners 12145 Darnestown Rd Gaithersburg MD 20878	550	<p>RCRA SQG, Dry Cleaners – Upgradient of LOD. The facility operates as a drycleaners (status inactive) and generated spent halogens with no violations found. The site was listed as being 190 feet northwest of the LOD; however, after further review, the site is actually 550 feet northwest of the LOD. Based on the local topography, the site is believed to be crossgradient of the LOD.</p>	Low

4	Texaco/ 12140 Darnestown Rd Gaithersburg MD 20878	530	<p>FINDS/FRS – Minor air permit, non-major NPDES permit. Received an informal violation related to the their air permit.</p> <p>OCP, UST - There are three currently in USTs: 10,000-gallon gasoline, 15,000-gallon gasoline, and 10,000-gallon diesel. The previous tanks installed on 1/1/1971 were removed from the ground on 6/8/1998.</p> <p>1986 to 2019 – A loss gasoline was reported in one of their previous UST. The UST was shut down and monitoring wells were installed around it, which indicated free product in the all five wells. A dual phase pump and treat system was installed at the site and 1,806-gallons of product was recovered up until 1996, when the system was shut down due diminishing amounts of product recovery. Free product was intermittently observed and vacuumed out of one of the monitoring wells from 1997 to 1999 (approx. 255 gallons). In 1998 the gas station was rebuilt and approximately 900 tons of impacted material was excavated and disposed of offsite. In 2000, another leak was discovered in the premium gasoline dispenser pump sump. Additional monitoring wells were installed onsite and free product was observed in the several of them. Several investigations and pilot studies were conducted through 2007 to determine the extent of the material. A SVE system was installed in 2008 and ran intermittently through 2019, when it was requested that the system be shut down to conduct monitoring to determine whether concentrations will rebound or not. Based on available data from the November 2019 quarterly sampling, concentrations of benzene (ND to 506 ug/l), BTEX (ND to 3,616 ug/l), MTBE (ND to 216 ug/l), TPH-GRO (ND to 9.7 ug/l), TPH-DRO (6.3 ug/l). Based on available data, groundwater is believed to flow to the northeast, crossgradient of the LOD. Thus, impacts are unlikely.</p>	Low

ERIS Site ID	Name/Address	Distance (Ft.)	Listing of concern (OCP Cases, USTs, ASTs, ERNS/HMIRS/Spills, LRP, VCP, NPL, SEMS, SEMS ARCHIVE)	Risk to LOD
5	Exxon 12175 Darnestown Rd Gaithersburg MD 20878	570	<p>UST, OCP – There are four currently in USTs: three 12,000-gallon gasoline, and 4,000-gallon used oil. The previous gasoline tanks installed on 5/1/1967 were removed from the ground on 5/11/1994.</p> <p>1994 – Two 8,000-gallon gasoline, one 6,000-gallon gasoline, and 550-gallon waste oil UST were excavated and removed from the site. Impacted material was encountered and removed (amount unknown). After the area had been over-excavated, soils in the excavation were screened with a PID that recorded readings of 11 to 55 ppm. Two soil borings were samples were collected at 19-21 feet bgs and 9-11 feet bgs and analyzed for benzene (ND-0.02 mg/kg), toluene (ND-0.24 mg/kg), ethylbenzene (ND-0.24 mg/kg), xylene (ND-1.1 mg/kg), and TPH (ND to 68 mg/kg. Three 12,000-gallon gasoline USTs and one 1,000-gallon waste oil UST was installed in their place.). Additionally, two monitoring wells were installed adjacent to the new UST to monitor for releases. The case was closed in 1995.</p> <p>2000 – An OCP case was opened for a compliance inspection. Several small violations were noted; however, none resulted in a release. The issues were addressed and the case was closed 2 months later.</p> <p>2010 – A limited subsurface investigation was conducted at the site. The results of the investigation determined that petroleum constituents were present the subsurface soils. TPH-GRO was detected at 3,000 mg/kg in one of the samples, which exceeded is MDE non-residential clean-up standard of 620 mg/kg. Subsequently, three groundwater samples were collected, which identified detected concentrations of TPH-DRO (0.69 mg/l to 1.14 mg/l) and TPH-GRO (1.62 mg/l to 180 mg/l), which exceed the MDE action levels of 0.047 mg/l. MTBE was also detected at 543 to 148,000 ug/l, which exceeded is action level of 20 ug/l. It was believed that some of the impacts were likely attributed to the gas station (Texaco/ 12140 Darnestown Rd Gaithersburg MD 20878) located to the south of the site that's summarized above. Between June 2010 and 2012, the wells were sampled 8 times and showed decreasing levels of petroleum constituents. MDE granted closure to the site in November 2012. Additionally, groundwater flow at the site is believed to be to the northeast, crossgradient of the LOD.</p>	Low

Street Address/Nearest Cross Streets	North side of Darnestown Road (MD 28), north of Prairie Landing Way	
City	North Potomac	
County	Montgomery	
Type of property	ROW	
Ranking Rationale Site Summary		
The LOD is located along the north side of Darnestown Road (MD 28), north of Prairie Landing Way, in Potomac, Maryland. Residential development is to the west and south, and a farm to the north. Commercial development is located to the east. The area surrounding the LOD was mostly developed by the late 1980's. Two sites were identified in the environmental database search: a site with multiple OCP cases for UST releases is located approximately 450 feet southeast of the LOD, and a pharmacy that is a registered RCRA VSQG is located approximately 605 feet to the east of the LOD. Based on the local topography the sites are believed to downgradient of the LOD. Thus, impacts to the LOD are unlikely.

APPENDIX E – MAINTENANCE OF TRAFFIC EVALUATION

Compensatory Stormwater Management Sites for the I-495 and I-270 Managed Lanes Study

APPENDIX E: Maintenance of Traffic Desktop Evaluations

1. Background

The I-495 and I-270 Managed Lanes Study (MLS) Compensatory Stormwater Management (SWM) Sites review requires a conceptual level review from Maintenance of Traffic's (MOT) perspective. The purpose of this review is to verify that the recommended location and the Limit of Disturbance (LOD) for each site is feasible and reasonable to accommodate MOT, construction access, and staging requirements.

2. Methodology and Assumptions

Maryland Department of Transportation State Highway Administration (MDOT SHA) conducted preliminary MOT evaluations of constructability and LOD at each of the potential SWM site for the MLS. MDOT SHA standards were applied when performing the conceptual level MOT evaluations. The evaluations were based on preliminary site LODs provided by the Water Resources Team. Because no design work has been done on the individual SWM sites at the time of review, this effort constitutes only a preliminary review to identify potential MOT and constructability issues with the LOD and type of potential SWM site provided. The goal of the review was to identify any potential issues or concerns and to identify sites that are not feasible from an MOT standpoint.

Because the MOT evaluations were based on preliminary information, additional review will be required for all sites as design information is developed.

In addition to the information provided by the Water Resources Team, MOT desktop evaluations are based on imagery available from Google Earth and Google Street View. At this time, no MOT team field visits have been made. Other disciplines provided field feedback, which was available for MOT review.

Transportation master plan of MDOT SHA and local public agencies were not consulted during the selection of the compensatory SWM sites. Therefore, in the next phase if a site is being selected for more serious deliberation, the potential SWM site improvements will need to involve cooperation with MDOT SHA and local public agencies to confirm that potential SWM improvements are coordinated with local transportation planning.

Maintenance of Traffic Review Considerations:

The elements taken into consideration at each site with respect to the degree of complexity from a MOT perspective of an identified site include:

Posted Speed Limit of Roadway – The preliminary information provided by the Water Resources Team included a potential location of the site. Majority of the identified sites are located adjacent to a roadway. The posted speed limit drives the MOT requirements because it determines the lateral distance from the edge of travelway that needs to be obstacle free. This influences the available area outside of the edge of travelway that is available for construction access and staging.

Existing Roadway Geometry and Features – While reviewing the identified compensatory SWM locations, the impacts to existing roadway features were identified and noted. Majority of the identified compensatory SWM sites are located adjacent to existing pavement which may impact existing pavement underdrain. Impact to the safety of traffic due to the construction of the potential SWM site was taken into consideration.

Shoulder Width – The existing paved shoulder width helps determine if there needs to be available space outside of the roadway for construction staging and access. This also determined if the construction could be done under flagging operations, roadway shifts, and/or shoulder closure.

Roadside Condition – The existing roadside condition helps determine if a long-term barrier is needed. It also factors in if the existing side slope is compatible with the potential SWM site. The existing fore slope and backslope helps determine if the LOD is feasible to accommodate the grading required for the construction of the potential SWM site. The existing grades were conceptually evaluated if a new retaining wall may be needed to install a potential SWM site within LOD. Many of the existing roadside barriers that do not meet MASH and NCHRP 350 standards will have to be replaced if it is within the LOD. Roadside safety for each site will have to be evaluated when more information regarding the potential SWM sites become available. Potential grading to construct new SWM site will comply with guidelines stated in AASHTO's Roadside Design Guide 2011 Edition. If clear zone requirements cannot be satisfied, then roadside barrier that meets MASH and NCHRP 350 guidelines will be designed and installed.

Traffic Operation and Safety – Existing traffic volume, operation and safety traveling on roadways impacted by the identified potential compensatory SWM sites will be taken into consideration when evaluating Maintenance of Traffic Alternative Analysis (MOTAA) in the future when more information becomes available. For example, further traffic analysis needs to be conducted to investigate if traffic operation continues to operate at an acceptable Level of Service (LOS) during construction hours, when a lane on a multilane expressway needs to be taken out of service due to the lack of available shoulder width.

Area Size of LOD – The size of the LOD was evaluated to determine if space is available within it to install the potential SWM site. During evaluation, the LOD area size was evaluated to determine if it is adequate to accommodate the potential SWM site and construction access and staging. For potential SWM median installations, the site was reviewed to confirm that the width of the median and inside shoulder width is sufficient for excavation and parking/maneuvering of construction equipment such as a crane or truck. In addition, the existing grade difference between opposing roadways was assessed to determine if it is appropriate for the potential SWM site. For potential SWM sites located adjacent to the outside edge of roadway, the site was reviewed to ensure that the LOD area can accommodate the potential grading required to construct the potential SWM and account for construction access and staging. For SWM sites that involve potential construction of pipes under existing major roadways, the size of LOD was evaluated to account for potential of jack and bore operations for the pipe construction.

Location of Site – The location of the potential SWM site determines if a standard, reasonable, and practical MOT plan can be applied during construction. The accessibility of the site was evaluated to be feasible.

Maintenance of Traffic Determination Definitions:

No MOT Required is assigned when the site is located away from public roadways and the construction does not interfere with traffic.

Temporary/Daily Shoulder Closures Required is assigned when the site has available space to store construction equipment and the existing shoulder will only be used to temporarily store equipment and for construction access. The shoulder will only be closed and used during contract documented work hours and cleared of obstacles during off work hours.

Long Term Shoulder Closures with Barrier Required is assigned when the existing roadway shoulder must be closed with temporary concrete traffic barriers erected to protect traffic from a potential roadside hazard. This situation happens when there is limited available space from edge of travelway to store equipment and the contractor may use the existing roadway shoulder to temporarily stage and park equipment.

Complex MOT Required is assigned when the construction of a site requires closure of a major roadway that will in consequence need to detour significant a volume of traffic. Another potential scenario would be that the LOD is widespread and consequently the MOT may necessitate numerous construction phases.

3. Conclusion

MDOT SHA completed a preliminary MOT review of 739 SWM facility sites and 15 stream restoration sites for the Compensatory SWM Plan. The following is a summary of the findings with respect to the MOT desktop evaluation of the site.

Table E-1. Summary of MOT Determinations

MOT Determinations	No. of SWM Sites	No. of Stream Restoration Sites
No MOT Required	4	0
Temporary/Daily Shoulder Closures Required	500	14
Long Term Shoulder Closures with Barrier Required	223	1
Complex MOT Required or Not Feasible for Other Reasons	12	0

Majority of the compensatory SWM sites identified can be constructed with applying standard MDOT SHA MOT plans with some minor adjustment to adapt to the local traffic pattern and roadway geometry. This is a conceptual level MOT review of the compensatory SWM sites identified based on very limited information available. More detail and specifics will be needed to do a more in-depth MOT evaluation which should be provided by designers in the future.
