## EXECUTIVE SUMMARY

---

Maryland Department of Transportation State Highway Administration (MDOT SHA) requested the general engineering consultant (GEC) to conduct a Limited Phase I Environmental Site Assessment (ESA) for the Phase I South portion of the Maryland I-495/I-270 Managed Lanes Study (MLS). Interstates I-495 and I-270 in Maryland are the two most heavily traveled freeways in the National Capital Region, each with average annual daily traffic volume of up to 260,000 vehicles per day in 2018 (MDOT SHA, 2019). I-495 is the only circumferential route in the region that provides interregional connections to many radial routes in the region, such as I-270, US 29 (Colesville Road), I-95, MD 295 (Baltimore-Washington Parkway), US 50 (John Hanson Highway), and MD 5 (Branch Avenue). I-270 is the only freeway link between I-495 and the fast-growing northwest suburbs in northern Montgomery County and the suburban areas in Frederick County. In addition to heavy commuter traffic demand, I-495 provides connectivity along the East Coast, as it merges with I-95 in Maryland for 25 miles around the east side of Washington, DC.

After discussion at the Federal and State levels, it was decided that the overall project would be divided into phases. This report covers what is known as Phase I South, which encompasses I-495 from the George Washington Parkway interchange in Fairfax County, Virginia to the interchange of I-270, I-495 and Rockville Pike (MD 355), as well as I-270 from the east and west interchanges of I-270 with I-495 to the interchange of I-370 and I-270 in Gaithersburg, Maryland. Future phase(s) will encompass the area along I-495 from the eastern interchange of I-270, I-495 and Rockville Pike to the interchange of I-495 and I-95, in addition to the interchange of I-95 and I-495 to Barry Drive in Temple Hills, Maryland.

The purpose of this Limited Phase I ESA was to identify soil, groundwater, soil vapor, or debris-impacted sites identified in the project corridor that have potentially impacted soil and groundwater within the limit of disturbance (LOD). The Phase I ESA was conducted in modified/limited accordance with EPA Standards and Practices for All Appropriate Inquiries as required under Section 101(35)(B) of the federal Superfund Law (CERCLA) as specified in Title 40 Code of Federal Regulations (CFR), Part 312; and ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13).

WSP made an effort to identify all sites of concern within, or partially within, a 0.25-mile buffer of the LOD. This 0.25-mile buffer is collectively known as the project corridor. Sites of concern within the project corridor were assigned risk classifications (high, medium, low, or de minimis) based on their potential to impact the area within the LOD.

In 1956, construction of Interstate I-270 and its eastern spur that connected the interstate with the northern portion of I-495 were completed. The western spur that connected I-270 with the southwestern portion of I-495 was completed in 1962. Interstate I-370, which intersects with I-270, connects the interstate with Maryland State Route 200 at the northern end of the Phase I South project corridor, and was completed around 1988.

The project corridor primarily consisted of undeveloped land and agricultural properties dating from at least the late 1800s up until the 1930s, when additional urban and suburban development began to increase around Bethesda, Maryland in the southeast portion of the project corridor.

The area around the convergence of the eastern and western spurs of I-270 with the main portion of I-270 is primarily commercial and retail shopping centers that began to be developed in the 1950s. The area north along the eastern I-495 spur has remained primarily residential since the 1960s. A buffer of forested

undeveloped land abuts the south-central portion of I-270 on both sides from Tuckerman Lane, continuing to the interchange with Montrose Road. Beginning just slightly north of the interchange of I-270 and West Montgomery Avenue and continuing to the northern end of the project corridor, both the eastern and western sides of I-270 began to be developed with multi-story office structures in the 1970s and currently house primarily biotechnology and government consulting companies. The area in the northern portion of the I-270/I-370 interchange was developed primarily with light industrial, commercial and warehousing facilities beginning in the late 1970s and continues to be utilized in that way. The area to the southwest of the I-370 interchange has been developed into a large mixed-use property that includes retail stores, restaurants, apartments, and hotels around a manmade lake.

A total of 255 sites within the project corridor were identified and classified as having either a high, medium, low or de minimis risk potential for contamination to the LOD based on a review of an environmental database report, historical aerial/topographic maps, site reconnaissance, and a review of regulatory documents from Maryland Department of the Environment (MDE) and the United State Environmental Protection Agency (USEPA).

- Through this evaluation, 11 of the 255 sites within the Phase I South project corridor have been ranked as high concern. Sites that fell under the high concern ranking are sites where releases are documented and are located within or adjacent to the LOD and thus, have the greatest potential to have impacted environmental media within the LOD. Forty-one (41) sites fell under the moderate concern ranking due to having documented releases; however, those sites are located at a sufficient distance from the LOD or were hydraulically separated from the LOD where impacts to the LOD are not anticipated. The remaining sites fell either under the low concern or de minimis rankings meaning these sites either had no documented releases or prior releases were documented to be adequately remediated or were at a significant distance from the LOD where impacts to the LOD are unlikely. Below is a brief summary of the 11 sites ranked as high concern within the project corridor. Figures illustrating each site are provided in Appendix B – Phase I South Potential Sites Of Concern Corridor Figures. **Site #93, 10401 Motor City Drive, Bethesda (Ourisman Ford)** - Records of releases, poor housekeeping/ management of hazardous materials, and leaking underground storage tanks (LUSTs). The LOD encroaches on the eastern side of the site. There is a possibility that this site has impacted soil and groundwater within the LOD.
- **Site #106, 6324 Windermere Circle, Rockville (Williams Residence)** – Documented heating oil UST releases, approximately 120 feet hydraulically upgradient of the LOD; therefore, there is a possibility that this site has impacted soil and groundwater within the LOD.
- **Site #107, 6340 Windermere Circle (Muniz Residence)** – Documented heating oil UST release, approximately 80 feet upgradient of the LOD; therefore, there is a possibility that this site has impacted soil and groundwater within the LOD.
- **Site #116, 10901 Westlake Drive, Rockville (Montgomery County Public Schools Bus Depot)** – Records of historical petroleum releases, LUSTs, residual contamination left in-place from LUST sites, high probability of petroleum/oil/lubricant releases from the storage of buses on the facility for at least 26 years. Potentially impacted soil and groundwater within the LOD.
- **Site #134-137, 12400-12525 Park Potomac Avenue, Potomac (Perry and Park Potomac Apartments/ Fougler-Pratt Companies/ Harris Teeter/ Royal Valet)** – MDE Land Restoration Program (LRP)/Voluntary Clean-up Program (VCP) site that has had multiple investigations performed since 2004. Buried debris and former automotive uses of the property impacted soil and groundwater. Total Petroleum Hydrocarbons(TPH)-Diesel Range Organics (DRO) and naphthalene in shallow soils. TPH-DRO, Chloroform, 1,1 dichloroethene (DCE), cis 1,2-DCE, naphthalene,

Tetrachloroethylene (PCE), and trichloroethylene (TCE) in groundwater. The several parcels that compose the site received No Further Requirements Determination (NFRD) between 2009 and 2017. Land-use controls (LUCs) that include groundwater use restrictions (approximately 20-23 feet below ground surface (ft. bgs)) are currently imposed on the site. The LUC areas on Site #135 through #137, encroach on the LOD.

- **Site #182, 1330 Piccard Dr, Rockville (Intracel, Corp./Hazelton Labs America, Inc./ARE Acquisitions, LLC/MRI Global, Bioqual, Inc.)** – Three petroleum underground storage tanks (USTs) were formerly located on the west side of the property, nearest LOD. Based on historical documentation, there is a possibility that residual contamination still exists in subsurface soils and groundwater, possibly within the LOD.
- **Site #210, 1, 3 And 5 Choke Cherry Rd/9, 9f and 11 Choke Cherry Rd/ 20-30 Upper Rock Circle, Gaithersburg (Kodak Processing Labs, Lot 2/Danac Technological Park/ Former Kodak Processing Plant Lot 9a)** – Limited environmental investigations conducted in early 2003 identified elevated groundwater concentrations of petroleum hydrocarbons and chlorinated solvents (1,1-DCE) and elevated levels of arsenic in the surficial soil samples. The several parcels that compose the site received a No Further Requirements Determination (NFRD) in 2003. No data was identified in regard to off-site sampling. Groundwater monitoring data from 2003, identified detected concentrations of 1,1-DCE at 22 micrograms per liter (ug/l) in a monitoring well in the southwest corner of the site, near the LOD. The detected concentration exceeds the MDE Groundwater Cleanup Standard of 7 ug/l for 1,1-DCE. Groundwater is approximately 11 to 15 ft. bgs and flows towards the west/southwest. The southern and western portions of the site encroach on the LOD.
- **Site #212, 15730 Shady Grove Road, Gaithersburg (Shell Gas Station/ Fields Robert Shady Grove Texaco/ PEH, LLC #807)** – The site is an active gas station that has a history of LUSTs that required active remediation (pump and treat) from 1989 to 1996. Currently, four 10,000-gallon petroleum USTs and a 550-gallon used oil UST are present onsite. The LOD encroaches onto the eastern boundary of the site; therefore, there is the potential for petroleum-impacted soils to be encountered within the LOD.

In addition, due to the potential deposition of pollutants over time in stormwater management basins, WSP reviewed the existing stormwater basins located within or partially within the LOD with the use of GIS and aerial photography, as well as conducted site reconnaissance of the basins. This evaluation identified 11 stormwater basins of concern. The stormwater basin IDs and locations are provided below.

- **Basin #1, SWM Facility ID# 150650**, Located north of the eastern I-495/I-270 spur, east of Charnwood Drive and west of Rosemont Drive in Rockville.
- **Basin #2, SWM Facility ID# 150670**, Located in between the northbound and southbound lanes of the western I-495/I-270 Spur. Directly northwest of the convergence of the western and eastern I-495/I-270 spurs with the main portion of I-270 in North Bethesda.
- **Basin #3, SWM Facility ID# 150060**, Located west of the western I-495/I-270 spur and east of I-270 Exit 1, Democracy Blvd exit ramp in Bethesda.
- **Basin #4, SWM Facility ID# 150027**, Located east of I-270 in the undeveloped portion of the Montrose Road interchange southeastern cloverleaf.
- **Basin #5, SWM Facility ID# 150026**, Located east of I-270 in the undeveloped portion of the Montrose Road interchange northeastern cloverleaf.
- **Basin #6, SWM Facility ID# 150028**, Located west of I-270 in the undeveloped portion of the Montrose Road interchange northwestern cloverleaf.

- **Basin #7, SWM Facility ID# 150264**, Located west of I-270, south of West Montgomery Avenue and north of the I-270 southbound onramp from West Montgomery Avenue, Rockville.
- **Basin #8, SWM Facility ID# 150066**, Located east of I-270 and approximately 200 feet west of Redland Boulevard. The SWM basin abuts Site #201, Kaiser Permanente, 1396 Piccard Drive, Rockville.
- **Basin #9, SWM Facility ID# 150069**, Located east of I-270 and west of Site #213, Chemlawn Corp, 9230 Gaither Road, south of Site #216, East Coast Billing Center, 15800 Gaither Road, and northwest of Site #209, 15710 Shady Grove, Rockville.
- **Basin #10, SWM Facility ID# 150068**, Located east of I-270 and west of Site #213, Chemlawn Corp, 9230 Gaither Road, south of Site #216, East Coast Billing Center, 15800 Gaither Road, and northwest of Site #209, 15710 Shady Grove, Rockville.
- **Basin #11, SWM Facility ID# 150064**, Located east of I-270 in the undeveloped portion of the Sam Eij Highway interchange northbound onramp, Gaithersburg.

## SECTION 1: INTRODUCTION

---

WSP was retained by the Maryland Department of Transportation State Highway Administration (MDOT SHA) to conduct a Limited Phase I Environmental Site Assessment (ESA) for the Phase I South portion of the Maryland I-495/I-270 Managed Lanes Study (MLS). Interstates I-495 and I-270 in Maryland are the two most heavily traveled freeways in the National Capital Region, each with average annual daily traffic volume up to 260,000 vehicles per day in 2018 (MDOT SHA, 2019). I-495 is the only circumferential route in the region that provides interregional connections to many radial routes in the region, such as I-270, US 29 (Colesville Road), I-95, MD 295 (Baltimore-Washington Parkway), US 50 (John Hanson Highway), and MD 5 (Branch Avenue). I-270 is the only freeway link between I-495 and the fast-growing northwest suburbs in northern Montgomery County and the suburban areas in Frederick County. In addition to heavy commuter traffic demand, I-495 provides connectivity along the East Coast, as it merges with I-95 in Maryland for 25 miles around the east side of Washington, DC.

After discussion at the Federal and State levels, it was decided that the overall project would be divided into phases. This report covers what is known as Phase I South, which encompasses I-495 from the George Washington Parkway interchange in Fairfax County, Virginia to the interchange of I-270, I-495 and Rockville Pike, as well as I-270 from the east and west interchanges of I-270 with I-495 to the interchange of I-370 and I-270 in Gaithersburg, Maryland. Future phase(s) will encompass the area along I-495 from the eastern interchange of I-270, I-495 and Rockville Pike to the interchange of I-495 and I-95, in addition to the interchange of I-95 and I-495 to Barry Drive in Temple Hills, Maryland.

### 1.1 Purpose

The Maryland Department of Transportation State Highway Administration (MDOT SHA), in coordination with the Federal Highway Administration (FHWA) as the lead federal agency, is soliciting developer(s) as part of a public private partnership (P3) for transportation improvements to portions of the I-495 and I-270 corridors in Montgomery and Prince George's Counties, Maryland, and Fairfax County, Virginia.

The purpose of this Phase I ESA was to identify soil, groundwater, soil vapor, or debris-impacted sites in the project corridor that have potentially impacted the area within the limit of disturbance (LOD). This Limited Phase I ESA report has been prepared to assist the potential developer's decision making during the design and construction of the improvements along Phase I South, as well as reduce financial risks and delays associated with the discovery of unknown surface and subsurface contaminants during the development portion of the project. WSP made an effort to identify all sites of concern within, or partially within, a 0.25-mile buffer of the LOD. This 0.25-mile buffer is collectively known as the project corridor.

The Phase I ESA was conducted in modified/limited accordance with EPA Standards and Practices for All Appropriate Inquiries (AAI) as required under Section 101(35)(B) of CERCLA as specified in Title 40 Code of Federal Regulations (CFR), Part 312; the ASTM International Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13).

### 1.2 Scope of Services

The following work was conducted during completion of the environmental assessment:

- Review of previous environmental reports and files provided by (Maryland Department of the Environment) MDE. Summaries of the documents have been incorporated into various portions

of this document, specifically in the Phase I South – Detailed Hazardous Materials Site Summary Table provided in Appendix A.

- Geographic information systems (GIS) software was used to spatially interpret the proximity of sites of concern from the LOD, while also accounting for local topography, stormwater and hydrologic features to determine the risk/impact the site would have on the Phase I South project. A sequence of maps detailing all the sites identified within the project corridor are provided in Appendix B. Sites and/or stormwater management basins that were categorized as “High Concern” are provided in Appendix C and Appendix D, respectively.
- A site visit of the project corridor, including drive and walk-by reviews, where feasible, (e.g., at properties with public access, such as retail businesses), was conducted on July 22-24, 2020.
- Photographs of the properties within the project corridor were taken to document current conditions during the site reconnaissance. Photographs have been incorporated individually in site-specific data sheets (Appendix E).
- WSP interviewed regulatory personnel in regard to specific sites and environmental cases, as needed.
- An environmental database search and review was conducted of the project corridor and properties within AAI- and ASTM-specified search radii to identify known or potential releases, and to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The search (including the approximate minimum search distances) was conducted in accordance with the standards established by Section 101(35)(B) of CERCLA, 40 CFR 312.26, and ASTM 1527-13. The results of the database search are presented in Appendix F.
- A search and review of historical records pertaining to the project corridor. The records search produced the following results:
  - Aerial photographs dated 1937/1938, 1943 (partial coverage), 1951, 1959/1960, 1963, 1971, 1977, 1981, 1988, 1993/1994 (partial), 2005, 2009, 2013, and 2017. Due the large number of files and total cumulative file size, access to these documents will be made available via an electronic file repository titled Appendix G.
  - Historical topographic maps online for the following years: 1885 (partial), 1890 (partial), 1891/1893, 1894, 1897 (partial), 1900 (partial), 1908 (partial), 1923 (partial), 1944 (partial), 1945 (partial), 1950 (partial), 1951, 1956, 1965, 1971, 1979, 1979/1980, 1983 (partial), 1984 (partial), 1994 (partial), 2013/2014, and 2014 (Appendix H).
  - Sanborn Fire Insurance maps were unavailable due to a lack of coverage.
- WSP reviewed multiple physical setting sources for the project corridor, including the United States Department of Agriculture (USDA) Web Soil Survey, United States Geological Survey (USGS) topographic maps, and publications available on the Maryland Geological Survey (MGS) website.
- WSP reviewed the *Managed Lanes Hazardous Materials Technical Report*, US DOT FHWA and MDOT SHA, with assistance from consultant RK&K, dated December 2019.
- WSP reviewed information on the MDE Oil Control Program (OCP) Case Information, and Underground Storage Tank Facility Summary websites for information on petroleum releases and underground storage tanks.
- WSP submitted a Public Information Act (PIA) request to MDE to request additional information on specific sites that were identified in the EDR environmental database search report. Due the large number of files and total cumulative file size, access to these documents will be made available via an electronic file repository.
- WSP reviewed information on the MDE’s Land Restoration Program (LRP) Project Site Mapping online database regarding the locations of any sites enrolled in MDE LRP or voluntary cleanup programs.

- Relevant environmental documents were reviewed, including Montgomery parcel maps, and project maps.
- WSP reviewed property information available online through the Montgomery County GIS interactive maps.

This Limited Phase I ESA was conducted in general accordance with ASTM E 1527-13. The requirements of ASTM E 1527-13 were modified to remove the requirement of conducting an environmental lien search for the subject property, as well as the requirement to obtain user information. Asbestos-containing building materials, radon, lead-based paint, lead in drinking water, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, biological agents, mold, and high-voltage power lines are non-scope considerations under Section 13.1.5 of ASTM E 1527-13 and were not included in WSP's Phase I environmental site assessment process.

### 1.3 Data Gaps

WSP identified the following data gaps during this Limited Phase I ESA:

- The site inspection was conducted under limited access conditions to private properties; most observations were made from public road rights-of-way (ROW), parking lots, and other publicly-accessible locations.
- In some instances, historical resources (i.e., aerial photographs and topographic maps) lacked complete coverage of sections of the project corridor. Additionally, some of the aerial photographs were of poor quality. Based on these types of insufficient historical records, it may difficult to determine an adequate history of each project corridor site.
- Sanborn Fire Insurance maps were unavailable due to a lack of coverage.

### 1.4 Deviations

Other than the limitations and exceptions listed in Section 1.4, the following modifications to the ASTM E 1527-13 standard were used in this report:

- The User did not complete the User Questionnaire.
- Title records and environmental lien searches were not reviewed for sites within the project corridor.

### 1.5 Disclaimer

Client acknowledges and agrees that this report was prepared solely on its behalf and functions solely as a Phase I ESA. By accepting this report Client acknowledges and agrees that it may in part rely upon sources, either written or oral, that WSP considers reliable but which are not guaranteed or independently verified by WSP.

Where Client is required to disseminate this report, either by law or in connection with Client's business activities, to any other party to whom this report is not addressed (the "Third Party"), Client agrees to notify the Third Party of the terms of this disclaimer who in turn shall be bound by such terms. Any Third Party wishing to rely on the information and opinions contained herein does so at its own risk in absence of a written letter of reliance provided by WSP.

## SECTION 2: PROJECT CORRIDOR

### 2.1 Location and Legal Description

This study area encompasses I-495 from the George Memorial Washington Parkway interchange in Fairfax County, Virginia to the interchange of I-270, I-495 and Rockville Pike, as well as I-270 from the east and west interchanges of I-270 with I-495 to the interchange of I-270 and I-370 in Montgomery County, Maryland. The section of roadway approximately 22 miles in length.

Parcel-specific information, including property name, address, and owner, for ranked sites identified within the project corridor are included throughout this report and in the Phase I South – Detailed Hazardous Materials Site Summary Table, provided in Appendix A.

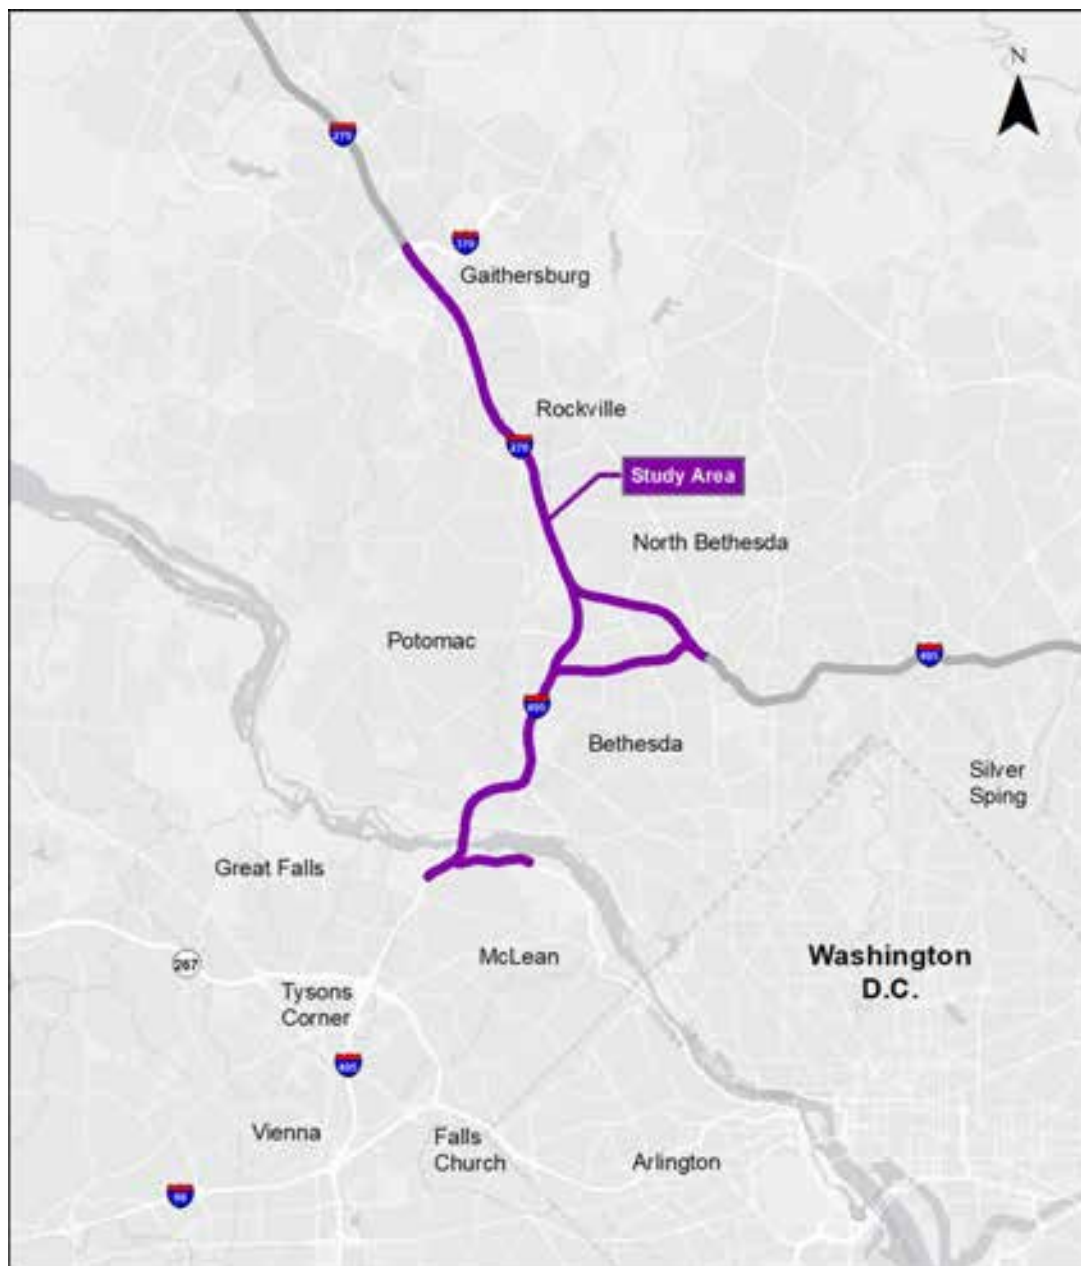

Figure 2.1 – Phase I South Study Area

## 2.2 Historical Use of the Project Corridor

The project corridor primarily consisted of undeveloped land and agricultural properties dating from at least the late 1800s up until the 1930s, when additional urban and suburban development began to increase around Bethesda, Maryland in the southeast portion of the project corridor. Several cities along the corridor, including Hunting Hill (northwest), Rockville (east), Montrose (east), Randolph (east), Bells Mills (west), Bethesda (southeast), and Cabin John (southeast) were observed on historical topographic maps from the late 1800s. However, little development appears to have occurred within the project corridor until the 1950s, with the exception of the US naval research facility that was constructed in approximately 1937, along the northern bank of the Potomac River, across from Virginia and west of the project corridor. The facility was originally named the David W. Taylor Naval Ship Research and Development Center, which was used to test miniature models of ships in a large model basin almost 500 feet long. The facility was renamed Carderock Division of the Naval Surface Warfare Center in the 1990s and is still an active naval research facility.

In 1956, construction of Interstate I-270 and its eastern spur that connected the interstate with the northern portion of I-495 was completed. The western spur that connected I-270 with the southwestern portion of I-495 was completed in 1962. Interstate I-370, which intersects with I-270, connects the interstate with Maryland State Route 200 at the northern end of the Phase I South project corridor, and was completed around 1988.

By the 1970s, the southern portion of the project corridor was developed almost entirely with residential properties and shopping centers. Commercial development began to also increase in the 1970s at the convergence of the two I-270 spurs with I-270, near the northern portions of Bethesda and Potomac, Maryland. The south-central portion has been developed over the years with residential communities, schools, and several Montgomery County support facilities, such as a school bus depot, maintenance vehicle depot, and jail, and medium size electrical substation managed by PEPCO, the local power utility provider.

Development along the north-central and northern portions of the project corridor also began in the 1970s; however, development consisted of primarily commercial, light industrial, and warehousing operations, especially in the area southeast of the I-370 interchange with I-270.

## 2.3 Current Use of the Project Corridor

The majority of the southern portion of the project corridor, including both the Maryland and Virginia sides, has remained residential since development started in the 1930s. Many of the properties are located on parcels of land greater than 1 acre in total size. The area adjacent to the convergence of the eastern and western spurs of I-270 with the main portion of I-270, is primarily commercial and retail shopping centers. The area north along the eastern I-495 spur is primarily residential. A buffer of forested undeveloped land abuts the south-central portion of I-270 on both sides from Tuckerman Lane, continuing to the interchange with Montrose Road, where approximately 30 office buildings and retail centers are present. Beginning just slightly north of the interchange of I-270 and West Montgomery Avenue and continuing to the northern end of the project corridor, both the eastern and western sides of I-270 are developed with multi-story offices that house primarily biotechnology and government consulting companies. As mentioned in the previous section, the area in the northern portion of the I-270/I-370 interchange was developed primarily with light industrial, commercial and warehousing facilities and continues to be utilized in that way, with the exception that some of the warehouse properties have been converted into recreational facilities, such as indoor trampoline parks, miniature golf courses, arcades, as well as a recently constructed indoor skydiving facility. The area to

the southwest of the I-370 interchange has been developed into a large mixed-use property that includes retail stores, restaurants, apartments, and hotels around a manmade lake.

Current conditions of sites noted during the site reconnaissance are summarized in the Phase I South – Detailed Hazardous Materials Site Summary Table provided in Appendix A, as well as in the Site Reconnaissance Photo log provided in Appendix E.

## SECTION 3: PHYSICAL SETTING

---

WSP reviewed multiple physical setting sources for the project corridor, including the United States Department of Agriculture (USDA) Web Soil Survey, United States Geological Survey (USGS) topographic maps, and publications available on the Maryland Geological Survey (MGS) website.

### 3.1 Topography

The general topography of the project area is dominated by a rolling plain or "low hill" landscape. Hills are concentrated in the northern part of Montgomery County adjacent to the major stream valleys. The highest point is 554 feet above sea level near the intersection of I-270 and I-370; the lowest point, 44 feet above sea level, is near the Potomac River at the southern portion of the project area. The average elevation gradient is 29 feet per mile (Montgomery County, 2020).

### 3.2 Geology and Soils

The Phase I South project corridor is located within the Piedmont Uplands physiographic province where the bedrock consists predominantly of metamorphic rocks. The predominant surficial rock type consists mainly of schist, along with small formations of gneiss and serpentinite. Alluvial deposits consisting of gravel, sand, silt, and clay of recent age are present along the Potomac River, particularly to the west. The area is within a low to moderate seismic zone (Montgomery County, 2018).

The Atlantic Coastal Plain province is east/southeast of the Phase I South project area and is separated from the Piedmont province by the Eastern Seaboard Fall Line that roughly parallels the northeast-southwest sections of I-95 outside the Beltway, running through the center of Washington, DC. The Atlantic Coastal Plain province is characterized by unconsolidated sedimentary deposits of sand, gravel, silt, and clay. Consolidated sedimentary rocks of Early Triassic age occupy a down-faulted basin in the western part of the county.

The Soil Survey of Montgomery County, Maryland (USDA, 1995) indicates that the western portion of I-495 and all of I-270 are underlain by two general soil associations. These include:

- Glenelg-Gaila-Occoquan Association: Composed of deep, nearly level to strongly sloping, well drained loamy soils on broad ridges and side slopes of uplands; and
- Urban Land-Wheaton-Glenelg Association: Composed of urban land with very deep, nearly level to strongly sloping, well drained loamy soils on broad ridges and side slopes of uplands.

### 3.3 Hydrogeology

According to the USGS and MGS, the Phase I South project area is primarily underlain by the crystalline-rock and undifferentiated sedimentary rock aquifer, one of the three primary aquifers of the Piedmont and Blue Ridge Physiographic Provinces. An unconsolidated, permeable material called regolith overlies these aquifers. The regolith consists of saprolite, colluvium, alluvium, and soil.

Groundwater is assumed to generally follow the topographic gradient from upland recharge areas to the nearest spring, stream, or waterbody. Most of the Piedmont and Blue Ridge Physiographic Provinces is underlain by dense impermeable bedrock that yields water from secondary porosity and permeability provided by fractures. Recharge is highly variable in these aquifers because it is determined by local precipitation and runoff, which are influenced by topographic relief, roadway infrastructure, land use, and the infiltration rates of the available land surface. A good portion of the

groundwater in these units occurs in the soil and weathered surface mantle which has an average thickness of 10-75 feet (Montgomery County, 2012 and 2018).

## SECTION 4: REGULATORY DATABASE REVIEW

---

### 4.1 Environmental Database Records review.

WSP retained EDR to search federal and state regulatory databases to identify environmental issues that have been reported for the Phase I South corridor and properties within the project corridor. Search radii specified by the AAI Standard (40 CFR 312.26(c)) and ASTM E 1527-13 were used. The complete database report, which provides detailed descriptions of the databases searched within the Phase corridor and surrounding properties, is provided in Appendix F.

The sites that have the greatest potential to have caused environmental contamination are those that have had releases or spills of hazardous substances or petroleum products located upgradient, adjacent to, or within the project corridor. Based on regional topography, groundwater is generally anticipated to flow to the east or southeast within the project corridor; however, local groundwater flow direction may vary.

A total of 1016 project corridor sites were listed in one or more of the environmental databases reviewed; however, of those 1016 sites initially identified within the project corridor study area, 722 sites were listed exclusively in the Maryland Lead Notification database, 20 sites were listed in the Maryland Asbestos notification database, and another 19 sites were found to be located outside the project corridor study area after verifying their respective addresses. It was determined that these sites were unlikely to have an adverse effect on the project corridor study; therefore, they were removed from further discussion in this report. Additionally, for sites that had multiple database listings, the lead and asbestos database listings were kept in the records of concern summaries of those respective sites. The remaining 255 sites identified in environmental databases as potentially having an adverse effect on the project corridor are summarized throughout this document, specifically, in the Phase I South – Detailed Hazardous Materials Site Summary Table provided in Appendix A.

### 4.2 Regulatory File Reviews

#### 4.2.1 Maryland Department of the Environment (MDE)

On August 28, 2020, Mr. Kevin Fields, Administrative Assistant, Oil Control Program (OCP)/Land and Materials Administration of MDE responded to WSP's Public Information Request (PIA) for documents pertaining to hazardous waste sites, petroleum releases/storage, land restoration/voluntary clean-up program sites, and spills. Due to COVID restrictions on outside personnel visiting Maryland government facilities, Mr. Fields sent a large electronic file with all the files MDE had available at the time. The file information provided by MDE is disseminated throughout this report and its appendices.

In addition to reviewing historical MDE case files, WSP reviewed information on the MDE OCP Case Information, and Underground Storage Tank Facility Summary websites for additional information on petroleum releases and underground storage tanks.

WSP reviewed information on the MDE's Land Restoration Program (LRP) Project Site Mapping online database regarding the locations of any sites enrolled in MDE LRP or voluntary cleanup programs (VCP).

Pertinent site-specific information identified from MDE's online data sources is disseminated throughout this report and appendices.

#### 4.2.2 United States Environmental Protection Agency (US EPA)

WSP reviewed available data and information on the US EPA's Enforcement and Compliance History Online (ECHO) website, which provides information on individual site's environmental permits, including, but not limited to air emission permits, Resource Conservation and Recovery Act (RCRA) generator permits, Toxic Release Inventory (TRI) reporting, and National Pollution Discharge Elimination System (NPDES) stormwater discharge permits.

WSP also reviewed various web-based mapping databases on the US EPA website, including NEPAassist, an online mapping system that draws environmental data dynamically from US EPA Geographic Information System (GIS) databases and web services and provides immediate screening of environmental assessment indicators for a user-defined area of interest. These features contribute to a streamlined review process that potentially raises important environmental issues at the earliest stages of project development.

Finally, WSP searched for federally regulated hazardous waste sites through the US EPA's web-based mapping system known as Cleanups in My Community, that enables users to map and review lists of hazardous waste cleanup locations and Brownfield grant sites.

#### 4.3 Unmapped Sites

One hundred and eighty-four (184) listings within a 1-mile radius of the project area were identified as "orphan sites" in the EDR database report. These sites are identified as unmappable sites due to imprecise or limited address information (e.g., an incomplete street address or a P.O. box). Therefore, it is difficult to determine the potential for activities at these sites to have affected the LOD. Orphan listings were identified in the following databases: RCRA generator (19 listings), Hazardous Materials Information Resource System (HMIRS) (8 listings), Emergency Response Notification System (ERNS) (18 listings), MDE OCP cases (33 listings), Maryland UST database (8 listings), Maryland VCP/LRP database (3 listings), US EPA Facility Index System (FINDS)/ECHO (25 listings), Drycleaner (1 listing), Lead (23 listings), Asbestos (10 listings), Manifest (21 listings), Mines (1 listing), Maryland Solid Waste/Landfill (SWF/LF) (1 listing), NPDES (5 listings). Based on a review of the information available, 19 of the orphan listings were associated with 11 sites that had already been identified as having at least one listing in the main database report. The details of these listings are included in the site summaries throughout this report.

The remaining orphan listings were determined to be de minimis in nature, such as lead/asbestos abatement associated with residential and commercial structures/improvements air emission permits, closed surficial spills de minimis in nature or outside the limits of the project corridor study area. During the site reconnaissance, none of the remaining "orphan sites" in the vicinity of the project area were observed; therefore, they are unlikely to pose an environmental concern.

## SECTION 5: HISTORICAL LAND USE REVIEW

---

Information sources that were used to evaluate past and present land use activities within the project corridor include historical aerial photographs and topographic maps. Fire Insurance maps were requested from EDR; however, there was no map coverage for any of the project area.

The following sections provide general observations regarding the land use history of the project corridor. Specific historical summaries for high concern sites, along with more detailed figures, have been incorporated, as appropriate, in figures provided in Appendix C.

### 5.1 Aerial Photographs

Aerial photographs dated 1937/1938, 1943 (partial coverage), 1951, 1959/1960, 1963, 1971, 1977, 1981, 1988, 1993/1994 (partial), 2005, 2009, 2013, and 2017. Due the large number of files and total cumulative file size, access to these documents will be made available via an electronic file repository titled Appendix G.

Aerial photographs dated 1937 through 1960 show that the project corridor was largely undeveloped land with pockets of forested land, agricultural fields, and residences dispersed throughout, with the exception of the City of Rockville, which appears to be relatively established, to the east of the north-central portion of the project corridor. The area currently occupied by the Naval Surface Warfare Center (NSWC) – Carderock, directly north of the Potomac River and west of the LOD in the southern portion of the project corridor, appears to have been cleared of vegetation in the 1937/1938 composite aerial photograph, and by 1951, the naval facility appears to be developed relatively similar to its current configuration. Large residential subdivisions are visible along the southeastern portion of the project corridor beginning in 1951.

The 1959/1960 composite aerial photograph shows I-270 running north to south, and the eastern I-270 spur that connects the interstate with I-495 has been constructed. The surrounding area to the east and west of I-270 is still primarily rural/agricultural land, with the exception of additional residential and commercial development around the City of Rockville, east of I-270 in the north-central portion of the project corridor.

The 1963 aerial photograph shows the southern portion of I-495 from the eastern I-270 spur, the American Legion Bridge spanning the Potomac River, and the Virginia portion of I-495 in the southern portion of the project corridor have been constructed. Substantial residential and commercial development is visible in the southern portion of the project corridor within Maryland, as well as in Virginia.

The 1971 aerial photographs shows additional residential development in the southern portion of the project corridor. The Westlake Mall is observed to the northwest of Democracy Boulevard and west of I-270. Commercial development is observed south of the intersection of the eastern and western I-270 spurs that converge with the main portion of the I-270. Additional commercial development beginning along the I-270 between Montrose Road and Falls Road, east of Rockville, is observed. Additional commercial development is observed southeast of the future I-370 interchange with I-270 in the northern portion of the project corridor.

The 1977 and 1981 aerial photographs show additional commercial development along the eastern and western sides of I-270 in the northern portion of the project corridor. Additional commercial development is observed in the area south of the intersection of the eastern and western I-270 spurs

that converge with the main portion of the I-270. Additional residential development is observed along the southern and north-central portions of the project corridor.

The 1988 aerial photographs show additional commercial development in the northern and south-central portions of the project corridor. The I-370 interchange with I-270 is shown to be under construction. A large commercial development that includes a manmade lake is observed to be under construction to the southwest of the I-370/I-270 interchange.

The 1993/1994 composite aerials only have coverage for the northern and southern ends of the project corridor. The I-370 interchange with I-270 is shown to have been completed. No substantial changes are observed in the southern portion of the project corridor that is covered in the aerial photograph.

The 2005 and 2009 aerial photographs show the project corridor developed in its current configuration, with the exception of a commercial development currently under construction northwest of the I-270 interchange with Montrose Road in the central portion of the project corridor.

The 2013 and 2017 aerial photographs show a commercial development under construction southeast of the I-270 interchange with Shady Grove Road in the northern portion of the project corridor. No other substantial changes are observed to the other portions of the project corridor.

## 5.2 Topographic Maps

Topographic maps produced by the USGS depicting cultural and natural surface features, as well as elevation contours, were reviewed for the years 1885 (partial), 1890 (partial), 1891/1893, 1894, 1897 (partial), 1900 (partial), 1908 (partial), 1923 (partial), 1944 (partial), 1945 (partial), 1950 (partial), 1951, 1956, 1965, 1971, 1979, 1979/1980, 1983 (partial), 1984 (partial), 1994 (partial), 2013/2014, and 2014. Copies of the topographic maps are provided in Appendix H.

The 1885, 1890, 1897, 1900 topographic maps only cover the southwest portion of the project corridor, where the Potomac river abuts the boundaries of Maryland and Virginia. Several roads and small structures are observed in the topographic maps. The Chesapeake and Ohio (C&O) Canal is observed running northwest to southeast along the Maryland side of the Potomac River.

The 1891/1893 and 1894 topographic maps cover the entire project corridor area. Several major roads bisect the corridor in this map. A railroad running northwest to southeast is observed to the west of the project corridor. Several towns are depicted to the east and west of the project corridor, including Hunting Hill (northwest), Rockville (east), Montrose (east), Randolph (east), Bells Mills (west), Bethesda (southeast), and Cabin John (southeast); however, little development appears to have occurred within the project corridor itself.

The 1908, 1923, and 1944 topographic maps cover the entire project corridor, with the exception of the southwestern portion from the western I-495/I-270 spur to Virginia. Both the 1908 and 1923 topographic maps show additional roadways, as well as a number of small structures, most likely residences and farms.

Additional development, primarily in urban areas, is observed to the east of the southern portion of the project corridor area in the Bethesda/Kensington area, as well as around Bethesda to east of the central portion of the project area in the 1944 and 1951 topographic maps. The US Navy Taylor Model Basin (currently the Naval Surface Warfare Center – Carderock) is observed along the Maryland side of the Potomac River and west of the southwestern portion of the project corridor area.

The 1956 topographic maps depict I-270 with several large intersections, running northwest to southeast, as under construction. The interstate ends at Old Georgetown Road which runs north to south through the middle of the southern portion of the project corridor area. Additional development is observed along the portion of I-270 under construction.

The 1965 topographic map shows the portion of I-270 shown as under construction in the 1956 topographic map as completed, as well as the portion of I-495 across the Potomac River to the south, which then turns east and then southeast. Both the eastern and western I-495/I-270 spurs are also shown on the topographic maps. Substantial residential and commercial development is observed along the southern and central portions the project corridor area. Minor development is observed in the northern portion of the project corridor, in the Gaithersburg area.

No substantial changes are observed to the project corridor area in the 1971 topographic map when compared to the 1965 topographic map, with the exception of additional residential development to the east and west of the central portion of the project corridor area, as well to the north of the northern portion of the project corridor area.

The 1979/1980 topographic map shows additional commercial development primarily along the central portion of the project corridor, as well as the northern portion of the project corridor area. The Westlake Mall is also observed to the west of the I-495/I-270 spur. Additional commercial development is observed in the area south of the intersection of the eastern and western I-270 spurs that converge with the main portion of the I-270.

The 1984 and 1994 topographic maps show additional commercial development along the northern, north-central portions of the project corridor, as well as in the area south of the convergence of the eastern and western I-270 spurs with the main portion of the I-270. Additional commercial development is observed in the northern portion of the project corridor, southeast of the future I-270/I-370 interchange.

The 2013/2014 topographic map shows that the I-370 interchange with I-270 in the northern portion of the project corridor area has been constructed. No structures are depicted in this topographic map.

## SECTION 6: SITE RECONNAISSANCE

David Postlewaite, Lead Environmental Scientist of WSP, conducted a site reconnaissance of the project corridor on July 22-24, 2020. During the site reconnaissance, weather conditions were sunny with temperatures ranging from 80 to 90 degrees Fahrenheit. Due to the COVID restrictions on workplaces, the majority of the commercial properties were vacant, which allowed WSP to observe many sites' hardscapes and parking lots free of obstructions (e.g., parked vehicles). WSP observed the following items during the reconnaissance of the properties:

- occupant/property use
- type of structures
- evidence of storage tanks
- evidence of releases, use and/or storage of hazardous substances or petroleum products

### 6.1 Site Operations, Processes, and Equipment

| Condition or Use     | Observed? | Sites   |
|----------------------|-----------|---|
| Emergency generators | Yes       | Emergency generators were observed on Sites #59, #145, #152, #156, #171, #164, #174, #178, #181, #182, #188, #216, and #254. No emergency generators were observed during the site reconnaissance within the boundaries of the LOD.   |
| Dry cleaning         | Yes       | Dry-cleaning facilities were observed on Sites #80, #168, and #215. No active or suspect dry-cleaning facilities were observed within the boundaries of the LOD during the site reconnaissance  |
| Photo processing     | No        | Site #210 was once a former Kodak Processing Plant that was active from 1967 to 1999. The area was impacted by spills and improper disposal of photographic processing chemicals that were present on-site when the facility was active; it is believed that subsurface contamination still exists on-site. No evidence of the former processing plant was observed during the site reconnaissance. The site is now developed with several mixed-used commercial/residential buildings and a small shopping center. |
| Incinerators         | No        |   |

### 6.2 Aboveground Chemical or Waste Storage

| Condition or Use   | Observed? | Comments   |
|--|-----------|--|
| Aboveground storage tanks (ASTs) or ancillary AST equipment  | Yes       | ASTs were observed on Sites #59, #65, #174, #93, #116, #145, #146, #152, #156, #178, #181, #182, #188, #198, #211, #216, #254 within the project corridor during the site reconnaissance.; however, no current evidence of ASTs or their ancillary equipment observed during the site reconnaissance are located within the boundaries of the LOD. |
| 5-gallon to 55-gallon drums or containers of petroleum containing materials, hazardous materials/waste, or unknown substances. | No        |  |

### 6.3 Underground Chemical or Waste Storage, Drainage, or Collection Systems

| Condition or Use  | Observed? | Comments  |
|---|-----------|---|
| Underground Storage Tanks (USTs) or ancillary UST equipment | Yes       | <p>Portions of several parcels (listed below) that are known to have USTs or formerly had USTs, are located within the project area; however, no current USTs or their ancillary equipment observed during the site reconnaissance are located within the boundaries of the LOD.</p> <p>Active USTs were observed on Sites #67, #68, #69, #78, #85, #163, #212, #220, and #225.</p> <p>Ancillary UST equipment associated with former USTs was observed on Site #74 (former Sears Auto Center) and #93.</p> |
| Sumps, cisterns, and/or dry wells                           | No        |   |
| Grease traps  | No        |   |
| Septic tanks and/or leach fields                            | No        |   |
| Oil/water separators  | No        |   |
| Pipeline markers  | No        |   |
| Wells/sample locations                                      | Yes       | <p>Leak detection/sentry wells associated with active USTs onsite were observed on Sites #67, #68, #69, #78, #85, #163, #212, #220, and #225.</p> <p>Former soil boring/ground water sampling points that were observed to have been grouted and abandoned were observed on Sites #67, #68, #74, #85, #93, #163, and #212.</p>  |

### 6.4 Electrical Transformers / PCB Equipment

| Condition or Use                                    | Observed? | Comments  |
|---|-----------|---|
| Pad- or pole-mounted transformers and/or capacitors | Yes       | <p>Project-wide: Pole- and pad-mounted electrical transformers were observed throughout the project area; however, no transformers were observed within the LOD. The transformers throughout the project are most likely owned and operated by Pepco; and as such, Dominion Energy would be responsible for the cleanup and remediation of any leaks, spills, or other releases from the transformers. No significant environmental concerns are anticipated from the transformers.</p> <p>A large electrical substation (Site #104) with multiple dielectric containing electrical equipment is partially located within the LOD; however, none of the electrical equipment is within the boundary of the LOD.</p> |
| Other equipment                                     | No        |   |

## 6.5 Releases or Potential Releases

| Condition or Use   | Observed? | Comments  |
|--|-----------|---|
| Stressed vegetation  | No        |   |
| Stained soil   | No        |   |
| Stained pavement or similar surface                                    | Yes       | Project-wide: Staining was observed on parking lots and hardscapes throughout the corridor; however, the staining appeared to be de minimis. Based on observations during the site reconnaissance, this is considered to be a de minimis condition.   |
| Leachate and/or waste seeps  | No        |   |
| Trash, debris and/or other waste materials                             | Yes       | Project-wide: Municipal solid waste and debris were observed throughout the project area, primarily along the roadways and adjacent storm water swales. The discarded items included, but were not limited to, plastic/glass bottles, plastic bags, and aluminum cans. Based on observations during the site reconnaissance, this is considered to be a de minimis condition. |
| Dumping or disposal areas  | No        |   |
| Construction/demolition debris and/or dumped fill dirt                 | No        |   |
| Surface water discoloration, odor, sheen, and/or free-floating product | No        |   |
| Strong, pungent, or noxious odors                                      | No        |   |
| Exterior pipe discharges and/or other discharges                       | No        |   |

## SECTION 7: INTERVIEWS

---

On September 11, 2020, WSP contacted Lisbeth Tolbert, Administrative Officer, OCP/Land and Materials Administration of MDE in regard to MDE's file retention policy. Ms. Tolbert stated that MDE's record retention schedules have been reviewed and adapted through the years based on changing technology and the needs of the program. Any changes to the program require the approval of the Maryland Department of General Services.

Under MDE's current requirements, when a case is closed, the records are scanned and kept indefinitely. MDE maintains the hard copy of the scanned file for three years, at which time it can be destroyed, if it is no longer needed.

Cases closed in the 1980s and 1990s may have been destroyed under different procedures from those that currently in place. Previous schedules did not require certain types of closed cases to be scanned (e.g., surface spills). Those files were maintained for a certain number of years, and then destroyed.

On September 15, 2020, WSP contacted Olaniran Sikarat, MDE OCP Inspector, in regard to an open case (14-0390MO) at Site #104, PEPCO - Bells Mill Substation #121 located at 10611 Westlake Drive, Bethesda, Maryland. During that discussion, Ms. Olaniran described the release incident which involved approximately 12 gallons of transformer mineral oil (non-PCB) to the ground in January 2014. Ms. Olaniran stated that she was onsite shortly after the release and all impacted soil had been excavated and removed from the site to her satisfaction. Finally, it was stated that the case is still pending due to large backlog of case files at MDE but should be closed out in the near future. Based on the information provided and nature of the release, this open OCP case most likely has no impact on the LOD.

## SECTION 8: FINDINGS

---

### 8.1 Ranking System

WSP identified all sites within the project corridor, and assigned risk classifications (e.g. high, moderate, low, or de minimis) based on their potential for contamination to the LOD. Sites were classified according to the following criteria listed below. Additionally, when it was possible to discern the approximate location of impacted areas within a site (e.g., location of current/former storage tanks, contamination plumes, land-use restrictions), the distance, from what has been defined as the “recognized environmental condition (REC)” in this report, to the LOD was used in lieu of the distance from the site’s property boundary to the LOD.

#### High Concern:

- Site has history of contamination, dumping and/or spills; and
- MDE cases are open; or
- MDE cases are closed, but residual contamination is known or suspected to remain;
- Site has multiple historical or operable USTs with violations or releases; or
- Open VCP, LRP, or Superfund site; or Land-use controls (LUC) have been imposed on the site.
- Site/REC is less than 300 ft hydraulically upgradient of the LOD; or
- Site/REC is less than 100 ft hydraulically downgradient or cross-gradient of the LOD.

#### Moderate Concern:

- Site has history of contamination, dumping and/or spills; and
- MDE OCP cases are closed with insufficient information regarding resolution;
- Site/REC is greater than 300 ft hydraulically upgradient of the LOD and is not separated from the LOD by a body of water or stream; or
- Site/REC is greater than 100 ft but less than 300 ft hydraulically down- or cross-gradient from the LOD;
- Site is listed as historical or existing dry cleaner or gasoline/auto station; or
- Site/REC is an LQG or SQG with documented violation notices; or
- Site has multiple historical or operable USTs; or
- Hazardous waste disposal or storage onsite; or
- Site has multiple historical or operable USTs with violations or releases; or
- Closed/no further action VCP, LRP, or Superfund site.

#### Low Concern:

- Site has no history of contamination or spills; or
- MDE OCP cases are closed or received no further action, with substantial information on remedial efforts and effectiveness;
- Site/REC is greater than 300 ft hydraulically down- or cross-gradient from the LOD or is separated from the LOD by a body of water or stream;
- Site is currently or historically listed as a RCRA- large quantity generator (LQG)/ small quantity generator (SQG)/ conditionally exempt small quantity generator (CESQG)/ very small quantity generator (VSQG) without documented violations or releases;
- Site has a single heating oil UST or less than 550-gallon historical or closed UST located greater than 250 ft from the LOD; or
- Site has historical or active ASTs present with no reported releases;
- Site/REC has undergone significant redevelopment as a non-petroleum/hazardous waste handling site.

De Minimis:

- Site has no history of contamination or spills; and
- Site is hydraulically down- or cross-gradient and greater than 300 feet (ft) from the LOD;
- Site has no history of contamination or spills; and
- Site is not listed as a RCRA generator, either currently or historically (i.e., NonGen/NLR);
- Site has no history of contamination or spills; or
- Site was found to be erroneously mislabeled as potential site of concern (e.g., gas station, auto repair facility, dry cleaner)

## 8.2 Sites of Potential Concerns

Based on observations from the site reconnaissance, database review, and other historic maps and information, sites located within the project corridor were classified as high, medium, low concern or de minimis based primarily on the potential for contamination from these sites to have impacted soil and groundwater within the LOD. A total of 255 sites were ranked as either high (11), medium (41), low (83) concern, or de minimis (120). Additional details pursuant to ranked sites are included on the Phase I South – Detailed Hazardous Materials Site Summary Table in Appendix A. The locations of the ranked sites are displayed in figures in Appendix B, Phase I South Potential Sites of Concern Corridor Figures. Sites of high concern are shown on individual figures in Appendix C. Stormwater management basins categorized as high concern are shown on figures provided in Appendix B.

### 8.2.1 High Concern Sites

The following table summarizes the 11 sites identified within the limits of the project corridor study area that were listed as high concern sites. Sites that fell under the high concern ranking are sites where releases are documented and are located within or adjacent to the LOD and thus, have the greatest potential to have impacted environmental media within the LOD.

| Table 8.1 – High Concern Sites |                              |           |  |  |
|--------------------------------|------------------------------|-----------|--|--|
| Site No.                       | Address                      | City      | Site Listing   | Records of Concern   |
| 93                             | 10401 Motor City Dr          | Bethesda  | Ourisman Collision Center  | Closed USTs, Spills, Violations, Scrap tire collection facility, Inactive auto repair shop; FINDS/ ECHO facility |
| 106                            | 6324 Windermere Cir          | Rockville | Williams Residence   | Closed heating oil USTs  |
| 107                            | 6340 Windermere Cir          | Rockville | Muniz Residence  | Closed heating oil UST   |
| 116                            | 10901 Westlake Dr            | Rockville | Montgomery County Public Schools Bus Depot   | Former and active fueling USTs, RCRA generator, auto repair, NPDES, FINDS/ ECHO/ US AIRS registry                |
| 134 to 137                     | 12400-12525 Park Potomac Ave | Potomac   | Perry and Park Potomac Apartments/ Fougler-Pratt Companies/ Harris Teeter/ Royal Valet | LRP, VCP, Institutional controls, historic cleaner   |

| Table 8.1 – High Concern Sites |   |              |   |   |
|--------------------------------|---|--------------|---|---|
| Site No.                       | Address   | City         | Site Listing  | Records of Concern  |
| 182                            | 1330 Piccard Dr   | Rockville    | Intracel, Corp./Hazelton Labs America, Inc./ARE Acquisitions, LLC/MRI Global, Bioqual, Inc.                               | Closed USTs, spills, NPDES, RCRA generator, FINDS/ ECHO registry  |
| 210                            | 1, 3 And 5 Choke Cherry Rd/9, 9f and 11 Choke Cherry Rd/ 20-30 Upper Rock Cir | Rockville    | Kodak Processing Labs, Lot 2, Danac Technological Park/ Former Kodak Processing Plant Lot 9a (Rap)/ Exterior/Ground Work/ | MDE VCP, Institutional controls, closed UST, RCRA generator, FINDS/ ECHO registry                             |
| 212                            | 15730 Shady Grove Rd  | Gaithersburg | Texaco - 15730 Shady Grove Rd/ Fields Robert Shady Grove Texaco (EDR Hist Auto)/ PEH, LLC #807/ Shell                     | Gas Station, Closed USTs, LUSTs, Active USTs, spills, RCRA generator, FINDS/ ECHO/ ICIS FRS/ US AIRS registry |

The following presents a discussion of each of these high concern sites:

#### 8.2.1.1 Site # 93

**10401 Motor City Drive, Bethesda (Ourisman Ford)** - This site is currently an inactive auto repair facility. This site was originally flagged for being listed on the following databases: Oil Control Program (OCP), underground storage tank (UST), leaking UST (LUST), and RCRA SQG databases. The site previously contained two (2) 4,000-gallon gasoline USTs and one 1,000-gallon used oil UST. Review of the MDE-provided files identified the following:

- **1990** - Soil samples were collected from a gasoline UST pit (2 USTs, approximately 90 ft off the LOD), as well as the waste oil UST excavation on the northeastern side of the facility. No detected concentrations identified in gasoline UST samples. Total Petroleum Hydrocarbons (TPH) were detected at 4,650 mg/kg in soils from the waste oil excavation, directly northeast of the structure.
- **1995** - Reports of poor housekeeping and MDE written notice of violations (NOVs). Waste oil tank released approximately 55 gallons onto the parking lot (area unknown, most likely eastern or southern side). MDE personnel reported that employees at facility had been instructed to directly dump oil down drains inside the shop that lead to an oil-water separator (OWS). Subsequently, the OWS was found to have collected a large amount of sludge; MDE instructed the owner to remove the material and clean the OWS.
- **2012** - Listed as a licensed Scrap Tire Collection Facility. No violations reported.
- **2013** - Approximately 10 gallons of lubricant oil were released onto the asphalt surface at the site. The spill was addressed and subsequently received closure from MDE.
- **2020** - The MDE Land Restoration Program was asked by the owner to conduct a technical review of report related to a recent investigation. According to available records, the LRP does not have oversight over the property; however, the site was given an LRP site tracking number (BMI # MD2019). During the site reconnaissance conducted in July 2020, the site was observed to be vacant. Multiple soil boring locations were observed throughout the asphalt lots on the site. Product lines from former storage tanks were observed on the northeast exterior (rear) of the facility.

#### 8.2.1.2 Site #106

**6324 Windermere Circle, Rockville (Williams Residence)** - This is a residential property that had two (2) leaking heating oil USTs. This site was originally flagged for being listed on the following databases: OCP and UST databases. Review of the MDE-provided files identified the following:

- **2004** - A 1,000-gallon heating oil (diesel #2) UST was found to have impacted soil and groundwater underneath the residence. Free product was observed along a sewer line underneath the structure. Subsequently, approximately 9.19 tons of soil were removed.
- **2007** - A 500-gallon heating oil (diesel #2) UST was found to have leaked on the property. The UST was excavated and removed, along with approximately 2.6 tons of soil and 20 gallons of liquid petroleum hydrocarbons (LPH) from the excavation pit. A vapor extraction system was installed in the basement to address vapor intrusion concerns. An additional 12.5 tons of soil were excavated and removed from the tank pit and two wells were installed to recover remaining LPH beneath the site. Additionally, approximately 2.62 tons of petroleum-impacted soil were excavated and removed from the area near sumps on the south side of the structure. Local topography is towards a low-lying area south, towards I-270. The site received no further action from MDE in 2008, with the agency allowing the residual contamination to remain on-site. The site is currently separated by a drainage ditch; however, possible residual impacted soil and groundwater may be present in or near the LOD.

#### 8.2.1.3 Site #107

**6340 Windermere Circle (Muniz Residence)** - This is a residential property that had a leaking heating oil UST. This site was originally flagged for being listed on the following databases: OCP and UST databases. Review of the MDE-provided files identified the following:

- **2008** - A residential 500-gallon heating oil (diesel #2) UST was found to have had a release at the property. Due to its location adjacent to the structure's foundation, the UST was abandoned in-place. TPH- Diesel Range Organics (DRO) (5,700 mg/kg), naphthalene (1400 mg/kg), and benzene, toluene, ethylbenzene, xylenes (BTEX) (961 mg/kg) detected between 7 to 7.5 ft bgs. MDE allowed for the impacted soil to remain in place. The site is approximately 80 ft from a low-lying area/creek and the LOD. Possible residual impacted soil and groundwater may be present in or near the LOD.

#### 8.2.1.4 Site #116

**10901 Westlake Drive, Rockville (Montgomery County Public Schools Bus Depot)** - This site is a fleet maintenance facility that has been active for at least 26 years. The site was originally flagged for being listed on the following databases: OCP and UST databases. Two 10,000-gallon diesel USTs, one 10,000-gallon gasoline UST, one 5,000-gallon heating oil (diesel #2) UST, one 550-gallon used oil UST and one 600-gallon used oil UST have been excavated and removed from the site. Currently, there are one 12,000-gallon gasohol and one 20,000-gallon diesel fuel USTs, along with fuel dispenser islands present on-site. Review of the MDE-provided files identified the following:

- **1993** - A 5,000-gallon diesel UST was excavated and removed from the site. The soils from the bottom of the excavation were checked with a Photoionization Detector (PID) that resulted in a reading of 156 parts per million (ppm); some residual contamination remains. Excavation pit was backfilled without further over-excavation.

- **1996** - Two 10,000-gallon diesel USTs and one 10,000-gallon gasoline UST were excavated and removed from the site, a PID reading from the bottom of the excavation was recorded at 1800 ppm; PID readings from the stockpiled soil ranged from 322-425 ppm. The stockpiled soils were removed and disposed of prior to collecting samples to be tested for TPH at a laboratory. Subsequently, the UST removal contractor was fined.
- **2000** - A 550-gallon used oil UST and a 5,000-gallon heating oil (diesel #2) UST were excavated and removed from the site, and no impacts to soil or groundwater were identified.
- **2014** - A 600-gallon used oil UST was excavated and removed from the site. Elevated concentrations of petroleum constituents were found in confirmatory samples. Approximately 18 tons of petroleum-impacted soils were removed from the UST excavation pit. Analysis of samples collected at the bottom of the excavation pit (12 ft bgs) were all below MDE residential standards. Concentrations of TPH-DRO detected at 600 and 570 mg/kg. Residual impacted soils may still exist on-site.
- **Currently** - A 12,000-gallon diesel UST, a 20,000-gallon gasoline UST, and a 600-gallon waste oil UST, along with fuel dispenser islands, are believed to still be present on-site. Additionally, an AST (approximately 500-gallons) was observed during the site reconnaissance conducted in July 2020, on the northwest portion of the facility from the ROW, along Westlake Drive.

#### 8.2.1.5 Site #134-137

**12400-12525 Park Potomac Avenue, Potomac (Perry and Park Potomac Apartments/ Fougler-Pratt Companies/ Harris Teeter/ Royal Valet)** – This property, which is broken into multiple sites totaling approximately 50 acres in size, is currently developed with townhouses, multi-story condominium complexes, office buildings and retail stores. These sites were originally flagged as being listed on the MDE LRP, MDE VCP, and Institutional/Land-Use Controls (LUCs) databases. Review of the MDE-provided files identified the following:

- **2004-2010** - Prior to development beginning in 2004, the site was primarily vacant, undeveloped land. The central portion of the site was believed to have been used as an unauthorized disposal area for construction debris. A vehicle repair facility was believed to have previously been located on site prior to 2004. Based on previous Phase I and Phase II Environmental Site Assessments (ESAs) conducted between 2004 and 2010, buried debris and former automotive uses of the property, along with upgradient sites to the northwest, were found to have impacted soil and groundwater. Chemicals of concern identified on the sites included TPH-DRO and naphthalene in shallow soils; and TPH-DRO, chloroform, 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethylene (cis-1,2-DCE), naphthalene, tetrachloroethylene (PCE), and trichloroethylene (TCE) in groundwater. Groundwater is believed to be approximately 20-23 ft bgs.
- **2009** - Site JJ received a NFRD from MDE.
- **2011** - Site HH received a NFRD from MDE.
- **2017** - Site GG received NFRD from MDE.
- **Currently** – The property currently has LUCs imposed on it that prohibit the disturbance of soil and/or use of groundwater on-site prior to notification of and approval from MDE. The LOD encroaches on Parcel HH, JJ, and FF, which will require coordination with MDE during construction.

#### 8.2.1.6 Site #182

**1330 Piccard Dr, Rockville (Intracel, Corp./Hazelton Labs America, Inc./ARE Acquisitions, LLC/MRI Global, Bioqual, Inc.)** – This site is adjacent to the eastern boundary of the LOD, along I-270. This site is a commercial structure that has had multiple tenants through the years. ARE Acquisitions, LLC is believed to be the current owner. The site was originally flagged for being listed on the following databases: OCP, UST and Spill databases. The site had two 20,000-gallon heating oil (diesel #2) USTs, two 1,000-gallon diesel USTs, and one 10,000-gallon heating oil (diesel #2) UST. All USTs have been excavated and removed; however, some impacted residual soil and groundwater may still exist on-site.

- **1994** – According to a spill report provided by MDE, approximately 20 gallons of petroleum were released onto bare soil (location unknown). The impacted soil was excavated, and the MDE OCP case closed.
- **1998** - Two 20,000-gallon diesel USTs, along with 1,000 tons of impacted soil, were excavated and removed from the site. A 10,000-gallon diesel UST was installed in place of the two 20,000-gallon USTs.
- **2000** - Approximately 700-gallon release of diesel fuel from generator day tank. An unquantified amount of oil was identified in streams on the opposite side of I-270. It is believed that the oil reached the streams via storm drains.
- **2010** - Oil-contaminated water identified under basement during construction. No further information was available from MDE regarding this case.
- **2011** - 1,000-gallon diesel UST and 10,000-gallon heating oil (diesel #2) UST, both fiberglass, were removed. Low levels of TPH-DRO (ND-110 mg/kg) were found in the northwest corner of the structure.
- **2014** – Approximately 11 gallons of motor oil were released when motor oil blew onto the generator. The spill was addressed and the MDE OCP case closed.
- **Currently** – No USTs are believed to exist at the site; however, it is possible that residual contamination may remain in the subsurface soils and groundwater in the vicinity of the former USTs once located on the west side of the site.

#### 8.2.1.7 Site #210

**1, 3 And 5 Choke Cherry Rd/9, 9f and 11 Choke Cherry Rd/ 20-30 Upper Rock Circle, Gaithersburg (Kodak Processing Labs, Lot 2/ Danac Technological Park/ Former Kodak Processing Plant Lot 9a)** - This site was once a former Kodak Processing Plant that was active from 1967 to 1999. The area was impacted by spills and improper disposal of photographic processing chemicals that were present on-site when the facility was active. The site was originally flagged for being listed on the following databases: MDE VCP, LRP, LUC, OCP, FINDs, National Pollution Discharge Elimination System (NPDES), and ECHO databases. Portions of the site received NFRD from MDE in both 2003 and 2010. Currently, LUCs and restrictions on the use of groundwater are imposed on the site. Review of the MDE-provided files identified the following:

- **1965 to 1998** - Kodak purchased the property on October 15, 1965 and, in 1967, began construction of the photo processing facility. In 1988, Qualex, a subsidiary of Kodak, assumed operations and, in 1994, Lerner, a subsidiary of Qualex, began operations at the facility. On October 15, 1998, JBG/JER Shady Grove L.L.C., purchased the property and leased the facility to Kodak to continue photo processing operations.

- **1967 to 1999** - Between 1967 and July 1999, photographic film processing operations occurred in the basement of a single-story building. The facility maintained permits during its operative years for heating oil tanks, wastewater discharge, and controlled hazardous substances. A variety of chemicals such as metal reagents, mineral spirits, and caustic and acid solutions were utilized in the photo processing operation. Spent silver, mineral spirits, and cyanide generated by the photo processing operations were discharged to a network of floor drains and sumps that entered the sanitary sewer system and an on-site dry well, located adjacent to the solvent room. Spent chemical sludge was also transported off-site as hazardous waste. In July 1999, operations at the facility ceased and in September 1999, Kodak began demolition activities, which were completed in March 2000.
- **1990 to 2003** - Multiple environmental investigations conducted between 1990 and 2003 identified soil and groundwater contamination on the southern portion of the property beneath the basement. Soil contaminants detected included low levels of semi-volatile organic compounds (benzo-[a]-anthracene, benzo[b]fluoranthene) and elevated levels of inorganics (arsenic, sulfides, cyanide). Groundwater contaminants detected were volatile organic compounds in the shallow aquifer and metals in the deep aquifer. In the shallow aquifer, the principal contaminants were chloroform, 1,1 DCE, acetone, 1,1-dichloroethane (1,1-DCA), 1,2-dichloroethane (1,2-DCA), 1,1,1-trichloroethane (1,1,1-TCA) and 1,1,2-trichloroethane (1,1,2-TCA), and traces of arsenic and selenium. In the deep aquifer, arsenic and selenium were identified. Groundwater contaminants were not detected in the domestic wells sampled in 2000.
- **2000 to 2010** - The site entered into the MDE VCP in 2000. On September 17, 2003, MDE issued a NFRD for the two parcels that abut the LOD along Shady Grove Road to the west and I-270 off-ramp to the south, contingent upon future limited residential use LUCs with a groundwater use restriction on the property. The remaining parcels that compose the Former Kodak Processing Plant/Danac Technological Park, subsequently received NFRDs from MDE, along with LUCs and groundwater use restrictions on the property. Groundwater monitoring data from 2003, identified detected concentrations of 1,1-DCE at 22 micrograms per liter (ug/l) in a monitoring well in the southwest corner of the site, near the LOD. The detected concentration exceeds the MDE Groundwater Cleanup Standard of 7 ug/l for 1,1-DCE. No data was identified in regard to off-site sampling. Based on local topography, groundwater is believed to be flowing to the southwest.
- **Currently** - The site is developed with multi-story residential structures, with one large office building in the central portion, along with a grocery store, restaurant, and CVS pharmacy on the northwestern portion of the site. No monitoring wells from the previous investigations were observed on the property during the site reconnaissance. Based on the local topography, the hydraulic gradient appears to trend to the southwest.

#### 8.2.1.8 Site #212

**15730 Shady Grove Road, Gaithersburg (Shell Gas Station/ Fields Robert Shady Grove Texaco/ PEH, LLC #807)** - This site is an active gas station that has been present on the property since at least 1971 when the first USTs were installed, including three 8,000-gallon gasoline USTs and one 550-gallon used oil UST. A soil vapor extraction (SVE)/pump and treat active remediation system was installed on the site after several of the USTs were excavated and removed in 1989. MDE granted closure in 1996; however, residual petroleum contamination may still exist on-site. Currently, there are three 10,000-gallon gasohol USTs, one 10,000-gallon diesel UST, one 1,000-

gallon heating oil (diesel #2) UST, and one 550-gallon used oil UST on-site. Review of the MDE-provided files identified the following:

- **1989** – Three 8,000-gallon gasoline USTs were excavated and removed from the site. Three 10,000-gallon gasohol USTs, one 10,000-gallon diesel UST, one 1,000-gallon heating oil UST and one 550-gallon used oil UST were installed at the service station facility. Impacted soil and groundwater were present on-site and a SVE/pump and treat remediation system was installed along with 15 monitoring wells. Groundwater samples from monitoring wells indicate that concentrations of BTEX were present on-site. Based on a figure provided in the MDE documents, the local groundwater gradient appears to trend towards the southwest.
- **1996** – MDE granted permission to backfill the excavation. MDE also determined that no further action was required in regard to the impacted soil and groundwater that was remediated through the SVE/pump and treat remediation system and the 15 monitoring wells could be abandoned on-site. Additionally, a 550-gallon used oil UST and an associated OWS (both installed in 1989) were excavated and removed from the site. No impacted soil or groundwater was encountered during the removal of the OWS. The soil excavated during the removal of the used oil UST along with the soil interval at the bottom of the excavation were screened with a PID. Readings ranged from 15 to 97 ppm. A reading of 16 ppm was recorded in the soil interval several feet below the former used oil UST (the deepest reading collected).
- **2001** – Two monitoring wells were installed at opposing corners of the tank field to a depth of 2 ft below the invert of the USTs.
- **Currently** - Four 10,000-gallon USTs (3 gasohol and 1 diesel), one 1,000-diesel UST and one 550-gallon used oil UST are currently in operation at the facility. It is unknown if groundwater at the site is still monitored due to the previous contamination found in 1989. The LOD encroaches onto the eastern boundary of the site; therefore, there is the potential for petroleum-impacted soils to be encountered within the LOD.

### 8.2.2 Moderate Risk Sites

The following table summarizes the 41 sites identified within the limits of project corridor study area that were listed as moderate concern sites. Moderate concern sites are sites that are known to have environmental issues but are either located at a sufficient distance from the LOD or were hydraulically separated from the LOD where impacts to the LOD are not anticipated.

| Table 8.2 – Medium Concern Sites |                        |          |   |   |
|----------------------------------|------------------------|----------|---|---|

### 8.2.3 Low Concern Sites

The following table summarizes the 83 sites identified within the limits of project corridor study area that were listed as low concern sites. Low concern sites are sites that either had no documented releases or prior releases were documented to be adequately remediated.

| Table 8.3 – Low Concern Sites |  |           |  |  |
|-------------------------------|--|-----------|--|--|
| Site No.                      | Address                                      | City      | Site Listing   | Records of Concern                             |

#### 8.2.4 De Minimis Sites

Sites were classified as de minimis risk if they were judged to be unlikely for potential contamination based on review of the environmental database listings, regulatory file review, and/or site reconnaissance. In general, de minimis sites were listed in a regulatory database but had no history of contamination or spills, no current or previous RCRA generator permits, air emission permits, national pollutant discharge elimination system (NPDES) permits; or had active/closed petroleum storage tanks, LRP/VCP sites, but were determined to be hydrologically downgradient/crossgradient and a reasonable distance from the LOD, whereas any environmental concerns associated with the site were determined to have no impact on the LOD. Additionally, the site reconnaissance did not identify hazardous materials or evidence of contamination at de minimis sites visited.

The following table summarizes the 120 sites identified within the limits of the project corridor study area that were determined to have a de minimis on the LOD:

| Table 8.4 – De Minimis Sites |                        |          |  |   |
|------------------------------|------------------------|----------|--|---|
| Site No.                     | Address                | City     | Site Listing   | Records of Concern  |
| 1                            | 850 Balls Hill Rd      | McLean   | Oakcrest School  | FINDS registry  |
| 2                            | 6811 Wemberly Wy       | McLean   | Wickersham, Warren G Property                                    | Closed LUST   |

### 8.2.5 Stormwater Management Basins of Concern

Non-point source pollution from stormwater runoff is well-documented as a leading cause of impairment of freshwater lakes, rivers, and estuaries. When impervious surfaces such as roads, parking lots, and rooftops replace areas that previously allowed infiltration of stormwater, the resulting stormwater runoff has typically been conveyed to storm or sanitary sewers which may act as conduits that carry pollutants (e.g., sediments, nutrients, metals, petroleum constituents) to receiving water bodies, such as stormwater management (SWM) basins (University of Minnesota, 2008). Over time, the concentrations of pollutants that are deposited in the SWM basins build up. When concentrations of certain pollutants (e.g., petroleum hydrocarbons, lead) increase in the sediments of the SWM basins, regulatory disposal requirements take effect when they are excavated and removed as they are now considered a regulated material that requires disposal per Federal and state regulations.

WSP reviewed the existing stormwater basins located within or partially within the LOD with the use of GIS and aerial photography, as well as conducted site reconnaissance of the basins that were identified to have potentially elevated levels of surface runoff contaminants based on the network of stormwater conveyance infrastructure that was discharging runoff from adjacent roadways and hardscapes in the respective basins. A table listing the SWM basins of concern is presented on the following page. Figures illustrating the location of these basins in the project corridor are presented in Appendix B. Detailed basin-specific figures are presented in Appendix D.

| Table 8.5 - Stormwater Management Basins of Concern |                  |  |   |
|---|------------------|--|---|
| Basin No.   | SWM Facility ID# | Site Address/Location  | Reason of Concern   |
| 1   | 150650           | Located north of the eastern I-495/I-270 Spur, east of Charnwood Drive and west of Rosemont Drive in Rockville.  | Potentially impacted sediment/soil from decades of vehicle/road runoff that may have been deposited in the stormwater management basin over time. |
| 2   | 150670           | Located in between the northbound and southbound lanes of the western I-495/I-270 Spur. Directly northwest of the convergence of the western and eastern I-495/I-270 spurs with the main portion of I-270 in North Bethesda. |   |
| 3   | 150060           | Located west of the western I-495/I-270 spur and east of I-270 Exit 1, Democracy Blvd exit ramp in Bethesda.   |   |
| 4   | 150027           | Located east of I-270 in the undeveloped portion of the Montrose Road interchange southeastern cloverleaf.   |   |
| 5   | 150026           | Located east of I-270 in the undeveloped portion of the Montrose Road interchange northeastern cloverleaf.   |   |
| 6   | 150028           | Located west of I-270 in the undeveloped portion of the Montrose Road interchange northwestern cloverleaf.   |   |
| 7   | 150264           | Located west of I-270, south of West Montgomery Avenue and north of the I-270 southbound onramp from West Montgomery Avenue, Rockville.  |   |
| 8   | 150066           | Located east of I-270 and approximately 200 feet west of Redland Boulevard. The SWM basin abuts Site #201, Kaiser Permanente, 1396 Piccard Drive, Rockville.   |   |
| 9   | 150069           | Located east of I-270 and west of Site #213, Chemlawn Corp, 9230 Gaither Road, south of Site #216, East Coast Billing Center, 15800 Gaither Road, and northwest of Site #209, 15710 Shady Grove, Rockville.                  |   |
| 10  | 150068           | Located east of I-270 and west of Site #224, Data Measurement Corp, 15884 Gaither Drive, Gaithersburg  |   |
| 11  | 150064           | Located east of I-270 in the undeveloped portion of the Sam Eig Highway interchange northbound onramp, Gaithersburg  |   |

## SECTION 9: CORRIDOR-WIDE CONCERNS

---

### 9.1 Unidentified Impacts

Additionally, implementation of the following mitigation measures will minimize the effects of hazardous materials during construction:

- Preparation of an Environmental Compliance Plan, detailing the methodologies to achieve and maintain environmental commitments and permit conditions throughout construction;
- Preparation of a Hazardous Materials Management Plan (HMMP) detailing the procedures and measures for the safe handling, storage, treatment and/or disposal of contaminated media, whether encountered at or brought within the LOD by the developer;
- Implementation of an environmental compliance and awareness training program;
- Preparation of an Emergency Action Plan (EAP) in accordance with OSHA Parts 1910 and 1926. As part of the EAP, a Spill Prevention, Control and Countermeasure (SPCC) Plan and Stormwater Pollution Prevention Plan (SWPPP) should be prepared in accordance with federal and Maryland regulations; and
- Preparation of a Health and Safety Plan (HASP) to protect worker health and safety.

### 9.2 Demolished Structures

While the LOD identified within this document does not indicate that structures will be acquired, should the LOD change or if additional lands outside of the LOD that contain structures will be acquired, hazardous materials surveys of those structures should be completed. Surveys for asbestos, lead-based paint, PCBs and universal wastes are recommended.

## SECTION 10: CONCLUSIONS

---

WSP was retained by Maryland SHA to conduct a Limited Phase I ESA of approximately 22 miles of roadway along I-495 and I-270, northwest of Washington D.C. The project area is known as Phase I South and encompasses I-495 from the George Washington Parkway interchange in Fairfax County, Virginia to the interchange of I-270, I-495 and Rockville Pike, as well as I-270 from the east and west interchanges of I-270 with I-495 to the interchange of I-270 and I-370 in Montgomery County, Maryland.

A total of 255 sites within the project corridor were flagged and classified as having either a high, medium, low or de minimis risk potential for contamination to the LOD based on a review of an environmental database report, historical aerial/topographic maps, site reconnaissance, and a review of regulatory documents from MDE and the US EPA.

Through this evaluation, 11 sites of the 255 sites within the Phase I South project corridor have been ranked as high concern. High concern sites that fell under the high concern ranking are sites where releases are documented and are located within or adjacent to the LOD and thus, have the greatest potential to have impacted environmental media within the LOD. Forty-one (41) sites fell under the moderate concern ranking due to those sites having documented releases; however, those sites are located at a sufficient distance from the LOD or were hydraulically separated from the LOD where impacts to the LOD are not anticipated. The remaining sites fell either under the low concern or de minimis rankings meaning these sites either had no documented releases or prior releases were documented to be adequately remediated or were at a significant distance from the LOD where impacts to the LOD are unlikely.

In addition, due to the potential deposition of pollutants over time in stormwater management basins, WSP reviewed the existing stormwater basins located within or partially within the LOD with the use of GIS and aerial photography, as well as conducted site reconnaissance of the basins. This evaluation identified 11 stormwater basins of concern.

Based on these findings, it is recommended that Phase II Environmental Site Investigation (ESI) activities be conducted to characterize the soils within the LOD nearest to each of the 11 high concern sites listed in Section 8.2.1, as well as sediments located in the 11 SWM basins of concern listed in Section 8.2.5. Proposed investigation for the high concern sites should adequately characterize surficial and subsurface soils, as well as groundwater, if anticipated to be encountered. Sample locations should take into account locations of previous releases, former/current/abandoned storage tanks, and inferred groundwater flow, as well as proposed soil/groundwater disturbance during construction. The laboratory analytical suite should be tailored to the contaminant(s) potentially present. Proposed investigation for the SWM basins of concern listed in Section 8.2.5 should adequately characterize deposited sediments present near each outfall as well as in each basin. Should contaminants be present at levels potentially indicative of hazardous waste, subsequent sampling utilizing Toxicity Characteristic Leaching Procedure (TCLP) is recommended.

## **SECTION 11: QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS**

---

This assessment is based on a thorough review of pertinent environmental files and site visits to the project area by the following Environmental Professionals: David Postlewaite, Lead Environmental Scientist and Erik Gustafson, PG, CHMM, Principal Environmental Scientist, both with WSP.

Appendix I contains supporting documentation of the qualifications of the environmental professionals listed above.

| 3   | The site was observed to be developed with multiple office and research buildings, some of which were very large in size. Several pools for research/ testing were also observed. Access to the site, as well as photographs of the site were restricted. | Naval Surface Warfare Center - Carderock Division, Carderock Taylor Testing | 9500 Macarthur Blvd | Potomac  | MD | 20817    | LRP, DOD Installation Restoration Program (IRP) Facility | <p>NSWC - Carderock Division performs Research, Development, Testing and Evaluation in naval architecture, marine engineering, ship concepts, vehicle technology and survivability under the effect of weapons; fleet support, and in-service engineering for surface and undersea vehicle systems. The facility initially had 9 restoration program sites and 4 munitions restoration program sites. The site has been by the Department of Defense since 1937.</p> <p>A Remedial Investigation (RI) of these nine sites under the DoD Installation Restoration Program (IRP) was initiated in 2001 and was completed in 2006 when a Record of Decision (ROD) was issued by the Navy for the 9 sites that stated that no further action was required for these sites.</p> <p>The 2006 RI identified an additional 16 sites of potential concern. Removal/remedial actions were conducted at 2 of the sites. The final Site Investigation Closeout Report concluded that no further action was required for the 16 sites (Sites 10-25).</p> <p>During a review of records of a World-War I chemical-weapons testing, a possible test area was identified as the Conduit Road Test Site (CRFT). The records indicated that an Army field test of various protective masks against diphenylchloroarsine (DA) gas may have been conducted near this site. An investigation was conducted by the Navy to evaluate these concerns. The investigation found no conclusive evidence for the exact location of the former CRFT. Representatives of MDE, USEPA, and the NSWCCD community expressed agreement with this assessment.</p> <p>Currently this is no IRP related activity being performed at the site. Based on a review of the available information on the restoration and munitions sites at this facility, none of the sites are expected to impact the LOD.</p> | LRP, DOD Facility                | 140  | NW                                 | Cross-gradient                                       | Moderate                                |

| 35  | This site was observed to developed with a private school. Several of the buildings appear to be new or have been renovated. No environmental concerns were observed during | French International School, Lycee Rochambeau | 9600 Forest Rd  | Bethesda | MD | 20814    | UST Facility ID: 2558 ACTIVE/INACTIVE; HIST UST Facility ID: 6008638; OCPCASES Facility ID: 07-0069MO1, CLOSED, 08/25/2006; 94-0387MO, 09/20/1993; 7-1607MO, CLOSED, 05/28/1987; 00-2011MO1, 03/04/2002; ASBESTOS; RCRA-VSQG EPA ID: MDR000526325; FTTS; FINDS/ ECHO/ US AIRS/ ICIS FRS Registry ID: 110001690965 | <p><b>1987</b> - A 6,000-gallon heating oil (diesel #2) UST was closed in-place after the UST failed a tank tightness test. Two monitoring wells were installed that were tested from free product, none of which was observed. A new 6,000-gallon heating oil UST was installed in-place of the abandoned UST. The case received closure from MDE approximately 3 months later.</p> <p><b>1993</b> - A 1,000-gallon diesel UST (installed in 1960) that had been used to fuel school vehicles, was excavated and removed from the site. Soil from the excavation was screened using a PID, which ranged from 68 ppm to 113 ppm. A PID reading from soil 2 ft. bgs of the bottom of the UST was recorded at 21.9 ppm. Based on these PID readings, the MDE inspector onsite during the UST removal allowed the excavation to be backfilled and recommended the case be closed. The case was formerly closed by MDE approximately 4 months later.</p> <p><b>2000</b> - The school hired a contractor to conduct a subsurface environmental investigation to determine if any residual petroleum contamination existed in the vicinity of the 6,000-gallon heating oil UST closed in-place in 1987, as well as in the vicinity of the active 6,000-gallon heating oil UST. Three soil boring samples were collected from depth ranging from 12-16 feet bgs around each UST and analyzed from TPH-DRO. TPH-DRO was not detected above the laboratory method detection limit in any of the samples collected. The case received closure in March 2002.</p> <p><b>2006</b> - An abandoned 1,500-gallon UST filled with water was found during construction in the parking lot of the school. PID readings were taken from the soils and excavation bottom that ranged from 5 to 103 ppm. Three confirmation soil samples were collected from the bottom of the excavation and analyzed for TPH-GRO, TPH-DRO, and BTEX, all of which were non-detect.</p> <p><b>Currently</b> - The 6,000-gallon heating oil UST installed in 1987 is believed to still be active on-site. The current and former USTs are believed to be at least 700 feet downgradient of the LOD; therefore, no impacts to the LOD are likely.</p> | Closed USTs   | 339  | S                                  | Downgradient   | Low                                     |

| 39  | The site was observed to be developed with several large radio towers. Access to the site was restricted.  | WMAL Radio                                 | 7115 Greentree Rd      | Bethesda | MD | 20817    | UST Facility ID: 2693; HIST UST Facility ID: 6008800; OCPCASES Facility ID: 97-0119MO2, CLOSED, 08/01/1996; ASBESTOS; MANIFEST                                   | <b>1996</b> – A 2,000-gallon steel heating oil (diesel #2) UST was excavated and removed from the site. No impacted soil was found (PID reading of 0 ppm). The case received closure from MDE shortly thereafter.  | Closed heating oil UST, ASBESTOS, MANIFEST               | LOD  | N                                  | Upgradient   | Low                                     |
| 40  |  | Ain Kivimae Residence                      | 7208 Grubby Thicket Wy | Bethesda | MD | 20817    | OCPCASES Facility ID: 14-0033MO, CLOSED, 08/27/2013  | <b>2013</b> - A 500-gallon heating oil (diesel #2) UST was excavated and removed from the northwestern corner of the residential structure on the property. The UST was found to have released petroleum into the soil in the vicinity of the UST. No soil was excavated due to both the sewer and water lines were believed to run near or underneath the former UST. A soil sample was collected approximately 1 foot below the grade of the former UST (approx. 6 ft bgs) and analyzed for TPH-DRO, TPH-GRO, and VOCs. The excavation was backfilled to grade with existing soils and borrow fill. Based on the analytical results, TPH-DRO was detected at 4,600 mg/kg, TPH-GRO was detected at 240 ug/kg, all VOCs were non-detect in the soil sample. The environmental contractor investigated the home's basement for signs of vapor intrusion using a PID and visual evidence of fuel oil seeping through the walls. Several days later, six soil borings were advanced using a geoprobe around the vicinity of the former UST. Four soil samples were collected and analyzed for TPH-DRO, TPH-GRO, and VOCs. Based on the analytical results, all samples analyzed were non-detect for the constituents analyzed for with the exception of detected concentrations of TPH-DRO (11,000 mg/kg), TPH-GRO (3,800 ug/kg), Xylenes (14 ug/kg), and naphthalene (6.2 ug/kg) in Sample #2 collected at 9 ft. bgs from the northern side of the eastern side of the excavation. Based on the results of the investigation, it appears that the residual soil contamination is localized and has not migrated off-site. The case received no further action from MDE in August 2013. The location of the former UST is believed to be approximately 396 feet east of the LOD. Based on this information summarized above, impacts to the LOD are unlikely. | Closed heating oil UST                                   | 362  | E                                  | Cross-gradient                                       | Low                                     |
| 41  | The site was observed to be developed with multiple multi-story apartment complexes. No environmental concerns were observed during the site reconnaissance. | Whitley Park Condominium Association, Inc. | 5450 Whitley Park Ter  | Bethesda | MD | 20814    | UST Facility ID: 12054/ ACTIVE/ INACTIVE; LEAD Facility ID: 160702904305, 160702904670, 160702904965, 16160702905036, FINDS Registry ID: 110019906477, 400235584 | <b>1986</b> – One 20,000-gallon heating oil (diesel #2) UST was closed in-place. The UST is associated with a former owner and structure that is different than what is presently located on the site. The case received closure in 2015.<br><br><b>Currently</b> - A 1,000-gallon diesel UST associated with an emergency generator was installed in 1988 and is currently in-use. The MDE case records have been reportedly destroyed per the information in the PIA request.  | Spill (surficial)                | LOD  | E                                  | Cross-gradient                                       | Moderate                                |
| 44  |                             | Howard Rubin          | 7209 Greentree Rd                  | Bethesda | MD | 20817    | OCPCASES Facility ID: 90-0101MO1, CLOSED, 08/14/1991                            | <b>1989</b> - In 1989 the owner of the residence on the site reported to MDE that a strong petroleum odor was emanating from the basement. Upon further investigation it was found that the residence's recently replaced heating oil UST on the south side of the residence was leaking. Heating oil was found in the basement sump pump and was discharging into the storm drain on the eastern side of the property. Impacted soil around the sump pump was excavated and disposed of off-site. An oil/water separator was installed to mitigate the petroleum discharge, as well as a fan and vent system to remove petroleum odors was installed. Additionally, two soil borings that were completed as piezometers (monitoring wells) were installed on the north and south side of the residence. TPH was detected at 5 mg/kg and 233.7 mg/kg in the two soil samples collected at approximately 10 feet bgs and 13 feet bgs, respectively. Concentrations of TPH were detected at 3 mg/l in the monitoring well on the south side of the property (no water was encountered in piezometer 2 on the north side). A trickle hose was installed to introduce a continuous flow between the monitoring well on the south side of the property and basement sump pump. In 1990 the air vent system and trickle hose were turned off after petroleum odors or sheens in the sump pump were no longer observed for one month. The case received no further action in August 1991. The former UST is approximately 450 feet east of the LOD and hydrologically crossgradient. Based on the information summarized above, no impacts to the LOD are likely. | Closed heating oil UST           | 428  | E                                  | Cross-gradient                                       | Low                                     |

| 93  | The former automotive facility onsite was observed to be vacant. Multiple soil boring locations were observed throughout the asphalt lots on the site. Product lines from former storage tanks were observed on the northeast exterior (rear) of the facility | Ourisman Ford | 10401 Motor City Dr | Bethesda | MD | 20817    | UST Facility ID: 14622; HIST UST Facility ID: 3008361; OCPCASES Facility ID: 91-0953MO, CLOSED, 04/20/1992; 96-0740MO2, CLOSED, 11/24/1995; 98-0945MO1, CLOSED 11/21/1997; RCRA-SQG EPA ID: MDD014415046; FINDS/ ECHO Registry ID: 110056023672; FINDS/ ECHO Registry ID: 110003508936 | <p>This site is an inactive auto repair facility. This site was originally flagged for being listed on the following databases: OCP, UST, LUST, and RCRA SQG databases. The site previously contained two 4,000-gallon gasoline USTs and one 1,000-gallon used oil UST. Review of the MDE-provided files identified the following:</p> <p><b>1990</b> - Soil samples were collected from a gasoline UST pit (2 USTs, approximately 90 ft of the LOD), as well as the waste oil UST excavation on the northeastern side of the facility. No detected concentrations identified in gasoline UST samples. Total Petroleum Hydrocarbons (TPH) were detected at 4,650 mg/kg in soils from the waste oil excavation, directly northeast of the structure.</p> <p><b>1995</b> - Reports of poor housekeeping and MDE written notice of violations (NOVs). Waste oil tank released approximately 55 gallons onto the parking lot (area unknown, most likely eastern or southern side). MDE personnel reported that employees at facility had been instructed to directly dump oil down drains inside the shop that lead to an oil-water separator (OWS). Subsequently the OWS was found to have collected a large amount of sludge, MDE instructed the owner to remove the material and clean the OWS.</p> <p><b>2012</b> - Listed as a licensed Scrap Tire Collection Facility. No violations reported.</p> <p><b>2013</b> - Approximately 10 gallons of lubricant oil were released onto the asphalt surface at the site. The spill was addressed and subsequently received closure from MDE.</p> <p><b>2020</b> - The MDE Land Restoration Program was asked by the owner to conduct a technical review of report related to a recent investigation. According to available records, the LRP does not have oversight over the property; however, the site was given a LRP site tracking number (BMI # MD2019).</p> | Closed USTs, Spills, Violations, Scrap tire collection facility, Inactive auto repair shop; FINDS/ ECHO facility | LOD  | W & S                              | Cross-gradient                                       | HIGH                                    |

| 96  | The site was observed to be developed with a multi-story office building. No environmental concerns were observed during the site reconnaissance. | Democracy Center One   | 6901, 6903, 6905 Rockledge Dr | Bethesda  | MD | 20817    | UST Facility ID: 17444/INACTIVE; HMIRS System ID: 415312<br><br>UST Facility ID: 12491/INACTIVE; HIST UST Facility ID: 6008998; OCPCASES Facility ID: 95-0668MO2, Closed, 04/27/1995; 00-1098MO1, Closed, 01/14/2000; HMIRS; EDR Hist Cleaner<br><br>UST Facility ID: 17443/INACTIVE; HIST UST Facility ID: 6008997; NPDES Facility Status Not reported; FINDS/ ECHO Registry ID: 110028106886; FINDS Registry ID: 110064823847 | <b>1995</b> - Two 550-gallon (Tank #1 and #2) and one 1,000-gallon (Tank #3) diesel USTs were excavated and disposed of off-site. Additionally, one 550-gallon diesel UST (Tank #4) was abandoned in-place at the site. The exact locations of the former USTs are unknown. PID readings from the bottom of the excavation for Tank #1 ranged from 24-50 ppm, PID readings ranged from 2-7 ppm from the Tank #2 excavation, PID readings ranged from 4-6 ppm from the Tank #3 excavation. A sample was collected below the bottom of Tank #4 and analyzed for TPH and naphthalene. No records associated with the sampling were identified; however, there are no open cases associated with the property and therefore, it is likely that no impacts associated with the UST abandoned in-place are present. | Closed USTs/ Active ASTs, spills, FINDS/ ECHO registry, Hist Cleaner | LOD  | E                                  | Cross-gradient                                       | Moderate                                |

| 104   | The site was observed to be a large electrical substation operated by Pepco. Access to the site was restricted. | Pepco- Bells Mill Substation #121 | 10611 Westlake Dr | Bethesda  | MD | 20817    | HIST UST Facility ID: 3009094; UST Facility ID: 4512; OCPCASES Facility ID: 14-0390MO, OPEN; 03-0806MO1, CLOSED, 01/13/2003; ENG CONTROLS; FINDS Registry ID: 110008479501; AST Facility ID: 2013-OPT-5882A | <p><b>1993</b> - A 11,000-gallon UST containing cable oil released approximately 250-gallons of oil. Approximately 50-gallons of oil reached a concrete stormwater ditch that flowed into an intermittent stream. The impacted soil was excavated and disposed of offsite. The oil present in the stream was captured with absorbent booms. MDE inspected the release after remediation had been completed and the case was granted closure.</p> <p><b>1990</b> - Two 5,000-gallon kerosene USTs installed in 1975 were excavated and disposed of offsite. No odors or impacted soil was encountered during the removal of one of the USTs, and the UST was found to be in good condition. MDE allowed the excavation to be backfilled with the soils generated from the UST removal. Some odor was encountered in the soil excavated during the second UST removal. The soil was stockpiled and allowed to aerate for an unknown amount of time before being backfilled. New 10,000-gallon fiberglass USTs were installed in their place.</p> <p><b>1996</b> - A release of approximately 5-10 gallons of non-PCB breaker oil occurred after a power line onsite was struck by lightning. The impacted soil was excavated and disposed off-site and the area was inspected by MDE, which approved of the remediation actions and closed the case shortly thereafter.</p> <p><b>1997</b> - One 650-gallon diesel UST (installed in 1982) and one 11,000-gallon diesel UST (installed in 1980) were excavated and disposed of off-site. No pitting or perforations were found on the two USTs. PID readings from the 2 ft. below the excavation ranged from 0.7 to 3.5 ppm; therefore, MDE allowed the excavation to be backfilled with clean soil and closed the case.</p> <p><b>2014</b> - According to a discussion with Sikirat Olairan, MDE OCP inspector, who is in charge of environmental cases with the Pepco substation located at 10611 Westlake Dr. Approximately 12-gallons of transformer mineral oil was released to the ground. Ms. Olairan stated that she was onsite shortly after the release and all impacted soil had been excavated and removed from the site. She stated that the case is still pending due to large backlog of case files at MDE but should be closed out in the near future.</p> <p><b>Currently</b> - Three 10,000-gallon kerosene USTs (fiberglass double-walled) installed in 1990 are believed to be present on-site currently.</p> | Close / Active USTs, ASTs Spills, Eng Controls, FINDS registry. | LOD  | W                                  | Upgradient/D owngradient                             | Moderate                                |

| 106   | The site was observed to be developed with a private residence. No environmental concerns were observed from the ROW during the site reconnaissance. | Williams Residence            | 6324 Windermere Cir | Rockville | MD | 20852    | OCPCASES Facility ID: 07-0645MO1, CLOSED, 06/23/2008; 04-0622MO1, CLOSED, 11/10/2004   | <p>This is a residential property that had two leaking heating oil USTs. This site was originally flagged for being listed on the following databases: OCP and UST databases. Review of the MDE-provided files identified the following:</p> <p><b>2004</b> - A 1,000-gallon heating oil (diesel #2) UST was found to have impacted soil and groundwater underneath the residence. Free product was observed along a sewer line underneath the structure. Subsequently, approximately 9.19 tons of soil was removed.</p> <p><b>2007</b> - A 500-gallon heating oil (diesel #2) UST was found to have leaked on the property. The UST was excavated and removed, along with approximately 2.6 tons of soil and 20 gallons of liquid petroleum hydrocarbons (LPH) from the excavation pit. A vapor extraction system was installed in the basement to address vapor intrusion concerns. An additional 12.5 tons of soil was excavated and removed from the tank pit and two wells were installed to recover remaining LPH beneath the site. Additionally, approximately 2.62 tons of petroleum-impacted soil were excavated and removed from the area near sumps on south side of structure. Local topography is towards a low-lying area south, towards I-270. The site received no further action from MDE in 2008, with the agency allowing the residual contamination to remain on-site. The site is currently separated by a drainage ditch; however, possible residual impacted soil and groundwater may be present in or near the LOD.</p> | Closed heating oil USTs                      | 5  | N                                  | Upgradient   | HIGH                                    |
| 107   | The site was observed to be developed with a private residence. | 109   |                             | Peter Black Residence | 10805 Mazwood Place | Rockville | MD | 20852    | OCPCASES Facility ID: 06-1025MO1, CLOSED, 03/14/2007 | <b>2006</b> - A residential 550-gallon heating oil (diesel #2) UST was excavated and removed from the site in 2006. Impacted media was encountered and approximately 167 tons of petroleum contaminated soils was excavated down to 8ft bs and disposed of off-site. Further excavation was not feasible without compromising the foundation of the residential structure. Confirmation soils were collected that identified detected concentrations of the TPH-DRO between 3,400 mg/kg and 4,500 mg/kg. The excavation was backfilled with clean fill and the case received closure in 2007 with the belief that residual contamination is contained to the around the former UST and there is currently no direct pathway of exposure. The UST was located on the southwestern side of the structure. The site itself is approximately 151 feet north of the LOD; however, based on the local topography, the former UST is approximately 450 feet to the northeast.   | Closed heating oil UST           | 151  | N                                  | Upgradient   | Moderate                                |
| 110   |                             | Neil Marquhardt       | 6104 Wayside Dr     | Rockville | MD | 20852    | OCPCASES Facility ID: 05-1058MO1, CLOSED, 08/17/2007 | <b>2005</b> - The owner reported heating oil (diesel #2) coming from a drain tile adjacent to the house. A contractor responded to the incident and found a product line had been compromised. The 500-gallon heating oil UST along with the product lines were excavated and removed, along with the impacted soil around the line and disposed off-site. A 500-gallon heating oil UST was installed in its place. The case received closure from MDE in 2007.  | Closed heating oil UST           | 162  | N                                  | Upgradient   | Moderate                                |
| 111   |                             | Robert Wagner Spill   | 6228 Mazwood Rd     | Rockville | MD | 20852    | OCPCASES Facility ID: 05-0258MO1, CLOSED, 01/17/2006 |  | Closed heating oil UST           | 475  | S                                  | Upgradient   | De minimis                              |
| 112   |                             | Salmon Residence      | 6316 Cameo Ct       | Rockville | MD | 20855    | OCPCASES Facility ID: 06-1141MO1, CLOSED, 01/12/2007 | <b>2006</b> - One 1,000-gallon heating oil (diesel #2) UST was abandoned in place. Two soil samples were collected at 8 feet bgs and analyzed for TPH-DRO (23 mg/kg) and BTEX (77 ug/kg). It was concluded that any impacted soil was primarily located in the vicinity of the abandoned UST and had not migrated off-site. Based on information provided in the MDE files, the abandoned UST is approximately 540 feet north of the LOD; therefore, impacts to the LOD are unlikely.  | Closed heating oil UST           | 390  | N                                  | Upgradient/  | Low                                     |
| 113   |                             | Maria Rivas Residence | 6110 Wayside Dr     | Rockville | MD | 20896    | OCPCASES Facility ID: 14-0075MO, CLOSED, 08/14/2013  | <b>2012</b> - A 500-gallon heating oil (diesel #2) UST was excavated and removed from the northwestern side of the residential structure. The UST was found to have impacted the soil locally and approximately 6 tons of impacted soil was excavated and removed from the site. Additional excavation was not possible due to the proximity of the property's water line, septic lines, and the house's porch. Two soil samples were collected approximately 7.5 feet bgs, as well as from a random spot of impacted soil that still remained in the ground. TPH-DRO was detected at 9,900 to 10,000 mg/kg, TPH-GRO at 370 mg/kg to 1,700 mg/kg, total xylenes at 26 mg/kg to 51 mg/kg, naphthalene at 14 mg/kg to 27 mg/kg, Toluene at 2.1 mg/kg to 2.6 mg/kg, ethylbenzene at 5.1 mg/kg to 9.4 mg/kg. The excavation was backfilled with crushed stone and 10-10-10 fertilizer to assist with degradation of the remaining petroleum constituents in the subsurface. Results from the soil sampling indicated that residual petroleum contamination remains on-site. MDE granted no further action for the site based on the information summarized above and conditions onsite that restricted further excavation of the impacted soil. The site is approximately 485 feet north of the LOD. Groundwater flow is believed to follow the local topographic gradient to the southwest. | Closed heating oil UST           | 365  | N                                  | Upgradient   | Moderate                                |

| 116   | The site was observed to a bus depot for Montgomery County schools. An AST was observed on the NW portion of the facility from the ROW along Westlake Dr. | Mo County Public Schools Bus Depot/ Bethesda Maintenance Transportation Depot Facility/ Bethesda Depot | 10901 Westlake Dr  | Rockville | MD | 20852    | UST Facility ID: 11059; HIST UST Facility ID: 3008420; OCPCASES Facility ID: 15-0051MO, CLOSED, 12/02/2014; 93-2373MO2, CLOSED, 5/10/1993; 97-0078MO2, 11/13/2000; NPDES; FINDS/ ECHO Registry ID: 110022387059; RCRA-SQG EPA ID: MDD985385038, MANIFEST; FINDS, US AIRS, ECHO Registry ID: 110009680265 | <p>This site is a fleet maintenance facility that has been active for at least 26 years. The site was originally flagged for being listed on the following databases: OCP and UST databases. Two 10,000-gallon diesel USTs, one 10,000-gallon gasoline UST, one 5,000-gallon heating oil (diesel #2) UST, one 550-gallon used oil UST and one 600-gallon used oil UST have been excavated and removed from the site. Currently, there are one 12,000-gallon gasohol and one 20,000-gallon diesel fuel USTs, along with fuel dispenser islands present on-site. Review of the MDE-provided files identified the following:</p> <p><b>1993</b> - A 5,000-gallon diesel UST was excavated and removed from the site. The soils from the bottom of the excavation were checked with a Photoionization Detector (PID) that resulted in a reading of 156 parts per million (ppm); some residual contamination remains. Excavation pit was backfilled without further over-excavation.</p> <p><b>1996</b> - Two 10,000-gallon diesel USTs and one 10,000-gallon gasoline UST were excavated and removed from the site, a PID reading from the bottom of the excavation was recorded at 1800 ppm; PID readings from the stockpiled soil ranged from 322-425 ppm. The stockpiled soils were removed from and disposed of prior to collecting samples to be tested for TPH at a laboratory. Subsequently, the UST removal contractor was fined.</p> <p><b>2000</b> - A 550-gallon used oil UST and a 5,000-gallon heating oil (diesel #2) UST were excavated and removed from the site, and no impacts to soil or groundwater were identified.</p> <p><b>2014</b> - A 600-gallon used oil UST was excavated and removed from the site. Elevated concentrations of petroleum constituents were found in confirmatory samples. Approximately 18 tons of petroleum-impacted soils were removed from UST excavation pit. Analysis of samples collected at bottom of excavation pit (12 ft below ground surface [bgs]) were all below MDE residential standards. Concentrations of TPH-Diesel Range Organics (DRO) detected at 600 and 570 mg/kg. Residual impacted soils may still exist on-site.</p> <p><b>Currently</b> - A 12,000-gallon diesel UST, a 20,000-gallon gasoline UST, and a 600-gallon waste oil UST, along with fuel dispenser islands, are believed to still be present on-site.</p> | Former and active fueling USTs, RCRA generator, auto repair, NPDES, FINDS/ ECHO/ US AIRS registry | LOD  | W                                  | Upgradient   | HIGH                                    |

| 125   | The site was observed to be a residential property. No signs of environmental impacts were observed during the site reconnaissance. | Bhalla Residence                  | 20 Farm Haven Ct      | Rockville | MD | 20852    | OCPCASES Facility ID: 14-0725MO, CLOSED, 06/11/2014  | <b>2014</b> - In 2014 a subsurface investigation was conducted on the property to determine if a 1,000-gallon heating oil (diesel #2) UST had been properly abandoned in 2004. The environmental contractor could not determine if the UST had been properly abandoned after hand digging to uncover the top of the UST; therefore, a subsurface soil sample was collected from approximately 7.5 feet bgs that had a detected concentration of TPH-DRO of 770 mg/kg. Based on this information, the contractor fully excavated the UST and found that the vessel was full of oily water. Subsequently, the contents of the UST was pumped out, interior cleaned, and the UST was then removed from the ground. The soil interval below the UST appeared to be dry and no staining, odors or other indications of a release were observed. Two soil samples were collected from the either end of the excavation pit and analyzed for TPH-DRO, TPH-GRO, and VOCs. TPH-DRO was detected in both samples at 77 mg/kg and 150 mg/kg, respectively. No VOCs or TPH-GRO were detected in either of the two samples. Based on the information summarized above. MDE granted no further action for the site in June 2014. The former UST is approximately 320 feet north of the LOD. Based on the residual levels of TPH-DRO and the proximity to the LOD, impacts to the LOD are unlikely. | Closed UST                       | 242  | N                                  | Upgradient   | Low                                     |

| 134 - 137   | The site was observed to be developed with a multi-story mixed-use development, including restaurants, retail, stores, offices, outdoor pavilions, and a grocery store. There is a multi-story parking facility under the majority of the site. No signs of environmental impacts or monitoring wells were observed during the site reconnaissance. | Perry and Park Potomac Apartments/ Fougler-Pratt Companies/ Harris Teeter/ Royal Valet | 12400-12525 Park Potomac Ave | Potomac   | MD | 20854    | INST CONTROL; LRP; EDR Hist Cleaner                    | <p>This property, which is broken into multiple sites totaling approximately 50 acres in size, is currently developed with townhouses, multi-story condominium complexes, office buildings and retail stores. These sites were originally flagged as being listed on the MDE LRP, MDE VCP, and Institutional/Land-Use Controls (LUCs) databases. Review of the MDE-provided files identified the following:</p> <p><b>2004-2010</b> - Prior to development beginning in 2004, the site was primarily vacant, undeveloped land. The central portion of the site was believed to have been used as an unauthorized disposal area for construction debris. A vehicle repair facility was believed to have previously been located on site. Based on previous Phase I and Phase II Environmental Site Assessments (ESAs) conducted between 2004 and 2010, buried debris and former automotive uses of the property, along with upgradient sites to the northwest, were found to have impacted soil and groundwater. Chemicals of concern identified on the sites included TPH-DRO and naphthalene in shallow soils. TPH-DRO, chloroform, 1,1-dichlorethene (1,1-DCE), cis-1,2-dichlorethylene (cis-1,2-DCE), naphthalene, tetrachloroethylene (PCE), and trichloroethylene (TCE) in groundwater. Groundwater is believed to be approximately 20-23 ft bgs.</p> <p><b>2009</b> - Site JJ received a No Further Requirements Determination (NFRD) from MDE.</p> <p><b>2011</b> - Site HH received a NFRD from MDE.</p> <p><b>2017</b> - Site GG received NFRD from MDE.</p> <p><b>Currently</b> – The property currently has LUCs imposed on it that prohibit the disturbance of soil and/or use of groundwater on-site prior to notification of and approval from MDE. The LOD encroaches on Parcel HH, JJ, and FF, which will require coordination with MDE during construction.</p> | LRP, VCP, Institutional controls, hist cleaner | 160  | S                                  | Upgradient   | HIGH                                    |

| 182   | The site was observed to be developed with a multi-tenant office building. Emergency generators with a diesel AST was observed on the western side of the structure. A large HVAC condenser was observed further to the west within the LOD. | Intracel, Corp./Hazelton Labs America, Inc./ARE Acquisitions, LLC/MRI Global, Bioqual, Inc. | 1330 Piccard Dr | Rockville | MD | 20850    | HIST UST Facility ID: 6008947; OCPCASES Facility ID: 12-0276MO, CLOSED, 04/03/2012; 95-0747MO1, CLOSED, 02/06/1995; 98-2282MO2, 9/17/2001; 99-2775MO2, CLOSED, 07/13/1999; 00-1647MO2, CLOSED, 06/15/2000; 05/05/2005, CLOSED, 04/03/2012; NPDES, ECHO, FINDS, US EPA SQG / VSQG/ NLR/ NON-GEN (MULTIPLE) | <p>This site is adjacent to the eastern boundary of the LOD, along I-270. This site is a commercial structure that has had multiple tenants through the years. ARE Acquisitions, LLC is believed to be the current owner. The site was originally flagged for being listed on the following databases: OCP, UST and Spill databases. The site had two 20,000-gallon heating oil (diesel #2) USTs, two 1,000-gallon diesel USTs, and one 10,000-gallon heating oil (diesel #2) UST. All USTs have been excavated and removed; however, some impacted residual soil and groundwater may still exist on-site.</p> <p><b>1994</b> – According to a spill report provided by MDE, approximately 20 gallons of petroleum were released onto bare soil (location unknown). The impacted soil was excavated, and the MDE OCP case closed.</p> <p><b>1998</b> - Two 20,000-gallon diesel USTs, along with 1,000 tons of impacted soil, were excavated and removed from the site. A 10,000-gallon diesel UST was installed in place of the two 20,000-gallon USTs.</p> <p><b>2000</b> - Approximately 700-gallon release of diesel fuel from generator day tank. An unquantified amount of oil was identified in streams on the opposite side of I-270. It is believed that the oil reached the streams via storm drains.</p> <p><b>2010</b> - Oil-contaminated water identified under basement during construction. No further information was available from MDE regarding this case.</p> <p><b>2011</b> - 1,000-gallon diesel UST and 10,000-gallon heating oil (diesel #2) UST, both fiberglass, were removed. Low levels of TPH-DRO (ND-110 mg/kg) were found in the northwest corner of the structure.</p> <p><b>2014</b> – Approximately 11 gallons of motor oil were released when motor oil blew onto the generator. The spill was addressed and the MDE OCP case closed.</p> <p><b>Currently</b> – No USTs are believed to exist at the site; however, it is possible that residual contamination may remain in the subsurface soils and groundwater in the vicinity of the former USTs once located on the west side of the site.</p> | Closed USTs, spills, NPDES, RCRA generator, FINDS/ ECHO registry | LOD  | E                                  | Downgradient   | HIGH                                    |

| 210   | The site was developed with multi-story residential structures, with one large office building in the central portion, along with a grocery store, restaurant, and CVS on the northwestern portion of the site. No monitoring wells from the previous investigations were observed on the property during the site reconnaissance. Based on the local topography, groundwater is expected to flow towards the northwest. | Kodak Processing Labs, Lot 2/ Danac Technological Park/ Former Kodak Processing Plant Lot 9a) | 1, 3 And 5 Choke Cherry Rd/ 9, 9f and 11 Choke Cherry Rd/ 20-30 Upper Rock Cir | Rockville | MD | 20850    | VCP; INST CONTROL; LRP; ASBESTOS<br>RCRA-LQG EPA ID: MDR000527335, MANIFEST; ECHO, FINDS<br>Registry ID: 110070207243 (CVS); OCPCASES Facility ID: 91-0437MO1, CLOSED, 02/13/1992; RCRA-SQG EPA ID: MDD022660088; FINDS Registry ID: 110056029337; FINDS/ECHO Registry ID: 110056029337; NPDES | <p>This site was once a former Kodak Processing Plant that was active from 1967 to 1999. The area was impacted by spills and improper disposal of photographic processing chemicals that were present on-site when the facility was active. The site was originally flagged for being listed on the following databases: MDE VCP, LRP, LUC, OCP, FINDs, National Pollution Discharge Elimination System (NPDES), and ECHO databases. Portions of the site received NFRD from MDE in both 2003 and 2010. Currently, LUCs and restrictions on the use of groundwater are imposed on the site. Review of the MDE-provided files identified the following:</p> <p><b>1965 to 1998</b> - Kodak purchased the property on October 15, 1965 and, in 1967, began construction of the photo processing facility. In 1988, Qualex, a subsidiary of Kodak, assumed operations and in 1994, Lerner, a subsidiary of Qualex, began operations at the facility. On October 15, 1998, JBG/JER Shady Grove L.L.C., purchased the property and leased the facility to Kodak to continue photo processing operations.</p> <p><b>1967 to 1999</b> - Between 1967 and July 1999, photographic film processing operations occurred in the basement of a single-story building. The facility maintained permits during its operative years for heating oil tanks, wastewater discharge, and controlled hazardous substances. A variety of chemicals such as metal reagents, mineral spirits, and caustic and acid solutions were utilized in the photo processing operation. Spent silver, mineral spirits, and cyanide generated by the photo processing operations were discharged to a network of floor drains and sumps that entered the sanitary sewer system and an on-site dry well, located adjacent to the solvent room. Spent chemical sludge was also transported off-site as hazardous waste. In July 1999, operations at the facility ceased and in September 1999, Kodak began demolition activities, which were completed in March 2000.</p> <p><b>1990 to 2003</b> - Multiple environmental investigations conducted between 1990 and 2003 identified soil and groundwater contamination on the southern portion of the property beneath the basement. Soil contaminants detected included low levels of semi-volatile organic compounds (benzo-[a]-anthracene, benzo[b]fluoranthene) and elevated levels of inorganics (arsenic, sulfides, cyanide). Groundwater contaminants detected were volatile organic compounds in the shallow aquifer and metals in the deep aquifer. In the shallow aquifer, the principal contaminants were chloroform, 1,1 DCE, acetone, 1,1-dichloroethane (1,1-DCA), 1,2-dichloroethane (1,2-DCA), 1,1,1-trichloroethane (1,1,1-TCA) and 1,1,2-trichloroethane (1,1,2-TCA), and traces of arsenic and selenium. In the deep aquifer, arsenic and selenium were identified. Groundwater contaminants were not detected in the domestic wells sampled in 2000.</p> <p>(cont. on next page)</p> | MDE VCP, Institutional controls, closed UST, RCRA generator, FINDS/ ECHO registry | LOD  | E & N                              | Upgradient   | HIGH                                    |

| 210<br>(cont.)  |  |                          |                   |           |    |          |  | <b>2000 to 2010</b> - The site entered into the MDE VCP in 2000. On September 17, 2003, MDE issued a NFRD for the parcels that compose two parcels that abut the LOD along Shady Grove Road to the west and I-270 off-ramp to the south, contingent upon future limited residential use LUCs with a groundwater use restriction on the property. The remaining parcels that compose the Former Kodak Processing Plant/Danac Technological Park, subsequently received NFRDs from MDE, along with LUCs and groundwater use restrictions on the property. Groundwater monitoring data from 2003, identified detected concentrations of 1,1-DCE at 22 micrograms per liter (ug/l) in a monitoring well in the southwest corner of the site, near the LOD. The detected concentration exceeds the MDE Groundwater Cleanup Standard of 7 ug/l for 1,1-DCE. No data was identified in regard to off-site sampling. Based on local topography, groundwater is believed to be flowing to the southwest. |  |  |                                    |  | HIGH                                    |
| 211   | The site was observed to be developed with a vacant multi-tenant office building. | 212   | The site is an active gas station and auto repair facility (minor repairs). The UST field is located on the north-central portion of the property. The site appears to slope towards the northwest. Several grouted and abandoned sampling points were observed throughout the paved area of the site. Based on the local topography, groundwater is believed to flow towards the northwest. | Shell Gas Station/ Fields Robert Shady Grove Texaco/ PEH, LLC #807 | 15730 Shady Grove Rd | Gaithersburg | MD | 20877    | UST Facility ID: 6735; HIST UST Facility ID: 3009282; FINDS, US AIRS, ICIS Registry ID: 110019873323; RGA LUST Facility ID: 9-1142MO, CLOSED, 11/14/1996; 01-1231MO2, CLOSED, 10/16/2001; 04-0228MO2, CLOSED, 07/30/2003; RCRA-VSQG EPA ID: MDD985371608; EDR Hist Auto ; | <p>This site is an active gas station that has been present on the property since at least 1971 when the first USTs were installed, including three 8,000-gallon gasoline USTs and one 550-gallon used oil UST. A soil vapor extraction (SVE)/pump and treat active remediation system was installed on the site after several of the USTs were excavated and removed in 1989. MDE granted closure in 1996; however, residual petroleum contamination may still exist on-site. Currently, there are three 10,000-gallon gasohol USTs, one 10,000-gallon diesel UST, one 1,000-gallon heating oil (diesel #2) UST, and one 550-gallon used oil UST on-site. Review of the MDE-provided files identified the following:</p> <p><b>1989</b> – Three 8,000-gallon gasoline USTs were excavated and removed from the site. Three 10,000-gallon gasohol USTs, one 10,000-gallon diesel UST, one 1,000-gallon heating oil UST and one 550-gallon used oil UST were installed at the service station facility. Impacted soil and groundwater were present on-site and SVE/pump and treat remediation system was installed along with 15 monitoring wells. Groundwater samples from monitoring wells indicate that concentrations of BTEX were present on-site. Based on a figure provided in the MDE documents, the local groundwater gradient appears to trend towards the southwest.</p> <p><b>1996</b> – MDE granted permission to backfill the excavation. MDE also determined that no further action was required in regard to the impacted soil and groundwater that was remediated through the SVE/pump and treat remediation system and the 15 monitoring wells could be abandoned on-site. Additionally, a 550-gallon used oil UST and an associated OWS (both installed in 1989) were excavated and removed from the site. No impacted soil or groundwater was encountered during the removal of the OWS. The soil excavated during the removal of the used oil UST along with the soil interval at the bottom of the excavation were screened with a PID. Readings ranged from 15 to 97 ppm. A reading of 16 ppm was recorded in the soil interval several feet below the former used oil UST (the deepest reading collected).</p> <p><b>2001</b> – Two monitoring wells at opposing corners of the tank field were installed to a depth of 2 ft below the invert of the USTs.</p> <p><b>Currently</b> - Four 10,000-gallon USTs (3 gasohol and 1 diesel), one 1,000-diesel UST and one 550-gallon used oil UST are currently in operation at the facility. It is unknown if groundwater at the site is still monitored due to the previous contamination found in 1989. The LOD encroaches onto the eastern boundary of the site; therefore, there is the potential for petroleum-impacted soils to be encountered within the LOD.</p> | Gas Station, Closed USTs, LUSTs, Active USTs, spills, RCRA generator, FINDS/ ECHO/ ICIS FRS/ US AIRS registry | LOD  | W                                  | Cross-gradient                                       | HIGH                                    |

| 217   |  | Home Depot #HD2550/ Bechtel Power Corp.                                  | 15740 Shady Grove Rd       | Gaithersburg | MD | 20877    | UST Facility ID: 11647 INACTIVE; HIST UST Facility ID: 3009199; FINDS/ ECHO Registry ID: 110003539172; RCRA-SQG EPA ID: MDR000001404, MANIFEST; | <b>1981</b> - Two 6,000-gallon gasoline USTs were installed on the property.<br><b>1992</b> - The two 6,000-gallon gasoline USTs were installed in 1981 were excavated and removed from the property. A PID was used to screen soil at the bottom of the tank pits. Readings from the Tank #1 excavation ranged from 18 ppm to 1,400 ppm. Readings from the Tank #2 excavation were recorded at 1,300 ppm. Based on these reading confirmation soil samples were collected from the bottom of the tank pits as well as a water sample from a temporary monitoring well and analyzed for MTBE, BTEX, and TPH. Elevated levels of all the analytes tested for were detected in the soil and groundwater samples. Subsequently, MDE requested that the monitoring well be resampled in 30 days to see if there were any changes to the concentrations, which the sampling showed a substantial decrease of BTEX concentrations and slight increases in concentrations of MTBE and TPH. Based on the results, MDE granted no further action to the site in November 1992. The former UST locations are at least 342 feet of the LOD and hydrologically crossgradient based on the local topography. | Closed USTs, FINDS/ ECHO registry, RCRA generator | 25   | NE                                 | Upgradient   | Moderate                                |

One of the UST was found to have a hole in the bottom of it after it had been removed from the ground. The soil in the excavation had a petroleum odor; therefore, the pit was over excavated to a depth of 13 feet bgs until soil was odor free. The impacted soil was disposed of off-site at a regulated facility. Four holes were found in the bottom of the 2nd UST removed. The soil in this excavation pit was also found to have an odor and the pit was over excavated to a depth of 11 feet until the soil was odor free. Both pits were backfilled and the MDE inspector onsite during the UST removals recommended no further action at the site. MDE closed the case in 1990. The former USTs were most likely located adjacent to the structure on-site, which is approximately 320 feet north of the LOD. Since most of the source material is believed to have been removed, impacts to the LOD are unlikely. | Closed USTs, FINDS/ ECHO registry                  | LOD  | N                                  | Upgradient   | Low                                     |

| 251   | This facility was observed to be a roofing/sheet metal company with two structures and outdoor storage area. No environmental concerns were observed. | Horizon Distributors, Inc/ Instate Corp Roofing & Sheet Metal                              | 16031 Industrial Dr | Gaithersburg | MD | 20877    | UST Facility ID: 17337/INACTIVE, HIST UST Facility ID: 3009157; RCRA-SQG EPA ID: MDD985410802, MANIFEST; FINDS/ ECHO/ US AIRS Registry ID: 110001783678; OCPCASES Facility ID: 95-2177MO, CLOSED, 04/05/1995; 8-0739MO, CLOSED, 09/01/1988 | <p><b>1987</b> - A 4,000-gallon gasoline underground storage tank (UST) failed a precision test and was removed. A petroleum odor was observed in the excavation; therefore, MDE requested that three monitoring wells be installed, and groundwater samples be collected and analyzed for benzene, toluene, and xylenes. Based on the analytical data provided the three analytes were non-detect in the groundwater samples. Additionally, a 1,000-gallon UST was installed in-place of the 4,000-gallon UST that was removed.</p> <p><b>1995</b> - One 1,000-gallon gasoline UST and one 4,000-gallon diesel UST were excavated and removed from the site. The soil from the excavation, as well as the soil at the bottom of the excavation were screened with a PID. PID readings ranged from 10 ppm to 49 ppm in the stockpiled soil and 30 ppm to 59 ppm at the bottom of the excavation. Based on the results of the PID screening, the MDE inspector onsite recommended that the excavation be backfilled, and the case be closed. One 2,000-gallon and one 1,000-gallon vaulted AST were installed in-place of the two former USTs.</p> <p><b>2015</b> - The cases remained open until 2015, as MDE would not close the cases until it was determined that the monitoring wells associated with the removal of the 4,000-gallon UST in 1987 had been properly abandoned. MDE inspected the site in 2015 and did not find any evidence of the monitoring wells onsite and grated closure to the two cases.</p> <p><b>Currently</b> - The two 1,000-gallon and 2,000-gallon vaulted petroleum ASTs are present in the central portion of the property. There are no records of releases associated with these two ASTs. Based on aerial photographs, the former USTs were at least 150 feet south of the LOD. A stormwater pond on the northern side of the property divides the property from the LOD.</p> | Closed USTs, RCRA generator, FINDS/ ECHO/ US AIRS registry | 50   | S                                  | Cross-gradient                                       | Moderate                                |
| 252   | Currently the site is a community services and support center. No environmental concerns were observed  | Glen Construction Co., Inc./ Merit Associates/Buchanan Properties, Inc./ 121 Kentlands LLC | 9055 Comprint Ct    | Gaithersburg | MD | 20877    | UST Facility ID: 9561; HIST UST Facility ID: 6008560; OCPCASES Facility ID: 99-2342MO2, CLOSED, 12/15/199; FINDS/ ECHO/ US AIRS Registry ID: 110001258683  | <p><b>1999</b> - Two 10,000-gallon USTs (one diesel and one gasoline) were excavated and removed from the rear of the building, near the loading dock. Soils at the bottom of excavation were screen with a PID. PID readings 11.1 ppm (gasoline UST excavation) and 9.1 ppm (diesel UST excavation) were recorded. The USTs were inspected after being removed from the ground. Some minor pitting was observed, but no holes were observed on either UST. The MDE inspector instructed the environmental contractor to backfill the excavations and recommended that the case be closed. The case received closure from MDE in December 1999.</p>   | Closed USTs, FINDS/ ECHO/ US AIRS registry                 | 5  | S                                  | Upgradient   | Moderate                                |
| 253   | The site was observed to a be a large warehouse facility. No environmental concerns were observed   | NIH DL Property Warehouse/ Armed Forces Inst Of Pathology                                  | 16050 Industrial Dr | Gaithersburg | MD | 20877    | FINDS Registry ID: 110003543498; 110016750434; 110070432588 MANIFEST, RCRA-SQG EPA ID: MDR000010231  | <p><b>Currently</b> - The facility is a registered RCRA-SQG. There have been no reported violations associated with the facility since at least 2010; therefore, impacts to the LOD are unlikely.</p>   | RCRA generator, FINDS registry                             | 5  | SE                                 | Upgradient   | Low                                     |

## **APPENDIX C – SITES OF HIGH CONCERN FIGURES**

10401 Motor City Drive, Bethesda - This site is currently an inactive auto repair facility. This site was originally flagged for being listed on the following databases: Oil Control Program (OCP), underground storage tank (UST), leaking UST (LUST), and RCRA SQG databases. The site previously contained two (2) 4,000-gallon gasoline USTs and one 1,000-gallon used oil UST. Review of the MDE-provided files identified the following:

1990 - Soil samples were collected from a gasoline UST pit (2 USTs, approximately 90 ft off the LOD), as well as the waste oil UST excavation on the northeastern side of the facility. No detected concentrations identified in gasoline UST samples. Total Petroleum Hydrocarbons (TPH) were detected at 4,650 mg/kg in soils from the waste oil excavation, directly northeast of the structure.

1995 - Reports of poor housekeeping and MDE written notice of violations (NOVs). Waste oil tank released approximately 55 gallons onto the parking lot (area unknown, most likely eastern or southern side). MDE personnel reported that employees at facility had been instructed to directly dump oil down drains inside the shop that lead to an oil-water separator (OWS). Subsequently, the OWS was found to have collected a large amount of sludge; MDE instructed the owner to remove the material and clean the OWS.

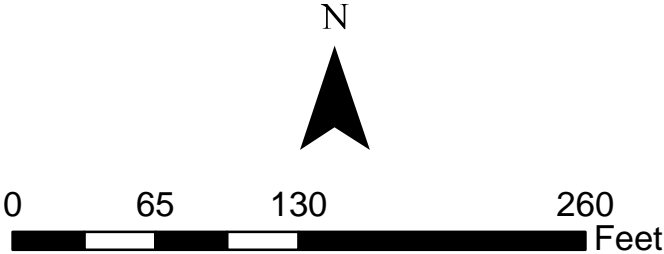

2012 - Listed as a licensed Scrap Tire Collection Facility. No violations reported.

2013 - Approximately 10 gallons of lubricant oil were released onto the asphalt surface at the site. The spill was addressed and subsequently received closure from MDE.

2020 - The MDE Land Restoration Program was asked by the owner to conduct a technical review of report related to a recent investigation. According to available records, the LRP does not have oversight over the property; however, the site was given an LRP site tracking number (BMI # MD2019). During the site reconnaissance conducted in July 2020, the site was observed to be vacant. Multiple soil boring locations were observed throughout the asphalt lots on the site. Product lines from former storage tanks were observed on the northeast exterior (rear) of the facility.

**Figure 1**

Site #106, 6324 Windermere Circle, Rockville - This is a residential property that had two (2) leaking heating oil USTs. This site was originally flagged for being listed on the following databases: OCP and UST databases. Review of the MDE-provided files identified the following:  
2004 - A 1,000-gallon heating oil (diesel #2) UST was found to have impacted soil and groundwater underneath the residence. Free product was observed along a sewer line underneath the structure. Subsequently, approximately 9.19 tons of soil were removed.  
2007 - A 500-gallon heating oil (diesel #2) UST was found to have leaked on the property. The UST was excavated and removed, along with approximately 2.6 tons of soil and 20 gallons of liquid petroleum hydrocarbons (LPH) from the excavation pit. A vapor extraction system was installed in the basement to address vapor intrusion concerns. An additional 12.5 tons of soil were excavated and removed from the tank pit and two wells were installed to recover remaining LPH beneath the site. Additionally, approximately 2.62 tons of petroleum-impacted soil were excavated and removed from the area near sumps on the south side of the structure. Local topography is towards a low-lying area south, towards I-270. The site received no further action from MDE in 2008, with the agency allowing the residual contamination to remain on-site. The site is currently separated by a drainage ditch; however, possible residual impacted soil and groundwater may be present in or near the LOD.

6340 Windermere Circle - This is a residential property that had a leaking heating oil UST. This site was originally flagged for being listed on the following databases: OCP and UST databases. Review of the MDE-provided files identified the following:  
2008 - A residential 500-gallon heating oil (diesel #2) UST was found to have had a release at the property. Due to its location adjacent to the structure's foundation, the UST was abandoned in-place. TPH- Diesel Range Organics (DRO) (5,700 mg/kg), naphthalene (1400 mg/kg), and benzene, toluene, ethylbenzene, xylenes (BTEX) (961 mg/kg) detected between 7 to 7.5 ft bgs. MDE allowed for the impacted soil to remain in place. The site is approximately 80 ft from a low-lying area/creek and the LOD. Possible residual impacted soil and groundwater may be present in or near the LOD.

| <b>Figure 3</b>   |                                  |

10901 Westlake Drive, Rockville - This site is a fleet maintenance facility that has been active for at least 26 years. The site was originally flagged for being listed on the following databases: OCP and UST databases. Two 10,000-gallon diesel USTs, one 10,000-gallon gasoline UST, one 5,000-gallon heating oil (diesel #2) UST, one 550-gallon used oil UST and one 600-gallon used oil UST have been excavated and removed from the site. Currently, there are one 12,000-gallon gasohol and one 20,000-gallon diesel fuel USTs, along with fuel dispenser islands present on-site. Review of the MDE-provided files identified the following:

1993 - A 5,000-gallon diesel UST was excavated and removed from the site. The soils from the bottom of the excavation were checked with a Photoionization Detector (PID) that resulted in a reading of 156 parts per million (ppm); some residual contamination remains. Excavation pit was backfilled without further over-excavation.

1996 - Two 10,000-gallon diesel USTs and one 10,000-gallon gasoline UST were excavated and removed from the site, a PID reading from the bottom of the excavation was recorded at 1800 ppm; PID readings from the stockpiled soil ranged from 322-425 ppm. The stockpiled soils were removed and disposed of prior to collecting samples to be tested for TPH at a laboratory. Subsequently, the UST removal contractor was fined.

2000 - A 550-gallon used oil UST and a 5,000-gallon heating oil (diesel #2) UST were excavated and removed from the site, and no impacts to soil or groundwater were identified.

2014 - A 600-gallon used oil UST was excavated and removed from the site. Elevated concentrations of petroleum constituents were found in confirmatory samples. Approximately 18 tons of petroleum-impacted soils were removed from the UST excavation pit. Analysis of samples collected at the bottom of the excavation pit (12 ft bgs) were all below MDE residential standards. Concentrations of TPH-DRO detected at 600 and 570 mg/kg. Residual impacted soils may still exist on-site.

Currently - A 12,000-gallon diesel UST, a 20,000-gallon gasoline UST, and a 600-gallon waste oil UST, along with fuel dispenser islands, are believed to still be present on-site. Additionally, an AST (approximately 500-gallons) was observed during the site reconnaissance conducted in July 2020, on the northwest portion of the facility from the ROW, along Westlake Drive.

Figure 4

12400-12525 Park Potomac Avenue, Potomac – This property, which is broken into multiple sites totaling approximately 50 acres in size, is currently developed with townhouses, multi-story condominium complexes, office buildings and retail stores. These sites were originally flagged as being listed on the MDE LRP, MDE VCP, and Institutional/Land-Use Controls (LUCs) databases. Review of the MDE-provided files identified the following:

2004-2010 - Prior to development beginning in 2004, the site was primarily vacant, undeveloped land. The central portion of the site was believed to have been used as an unauthorized disposal area for construction debris. A vehicle repair facility was believed to have previously been located on site prior to 2004. Based on previous Phase I and Phase II Environmental Site Assessments (ESAs) conducted between 2004 and 2010, buried debris and former automotive uses of the property, along with upgradient sites to the northwest, were found to have impacted soil and groundwater. Chemicals of concern identified on the sites included TPH-DRO and naphthalene in shallow soils; and TPH-DRO, chloroform, 1,1-dichloroethene (1,1-DCE), cis-1,2-dichloroethylene (cis-1,2-DCE), naphthalene, tetrachloroethylene (PCE), and trichloroethylene (TCE) in groundwater. Groundwater is believed to be approximately 20-23 ft bgs.

2009 - Site JJ received a NFRD from MDE.

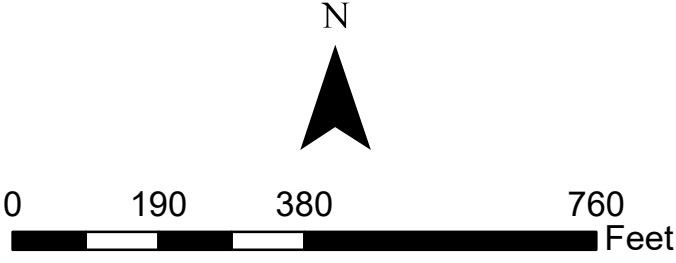

2011 - Site HH received a NFRD from MDE.

2017 - Site GG received NFRD from MDE.

Currently – The property currently has LUCs imposed on it that prohibit the disturbance of soil and/or use of groundwater on-site prior to notification of and approval from MDE. The LOD encroaches on Parcel HH, JJ, and FF, which will require coordination with MDE during construction.

**Figure 5**

1330 Piccard Dr, Rockville – This site is adjacent to the eastern boundary of the LOD, along I-270. This site is a commercial structure that has had multiple tenants through the years. ARE Acquisitions, LLC is believed to be the current owner. The site was originally flagged for being listed on the following databases: OCP, UST and Spill databases. The site had two 20,000-gallon heating oil (diesel #2) USTs, two 1,000-gallon diesel USTs, and one 10,000-gallon heating oil (diesel #2) UST. All USTs have been excavated and removed; however, some impacted residual soil and groundwater may still exist on-site.

1994 – According to a spill report provided by MDE, approximately 20 gallons of petroleum were released onto bare soil (location unknown). The impacted soil was excavated, and the MDE OCP case closed.

1998 - Two 20,000-gallon diesel USTs, along with 1,000 tons of impacted soil, were excavated and removed from the site. A 10,000-gallon diesel UST was installed in place of the two 20,000-gallon USTs.

2000 - Approximately 700-gallon release of diesel fuel from generator day tank. An unquantified amount of oil was identified in streams on the opposite side of I-270. It is believed that the oil reached the streams via storm drains.

2010 - Oil-contaminated water identified under basement during construction. No further information was available from MDE regarding this case.

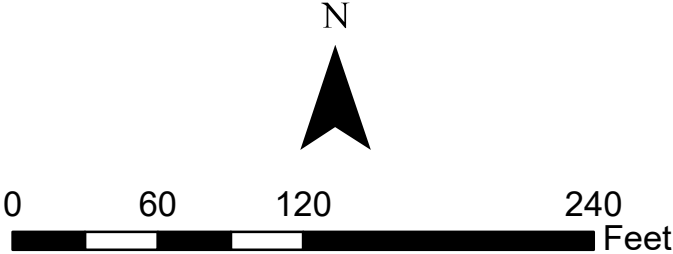

2011 - 1,000-gallon diesel UST and 10,000-gallon heating oil (diesel #2) UST, both fiberglass, were removed. Low levels of TPH-DRO (ND-110 mg/kg) were found in the northwest corner of the structure.

2014 – Approximately 11 gallons of motor oil were released when motor oil blew onto the generator. The spill was addressed and the MDE OCP case closed.

Currently – No USTs are believed to exist at the site; however, it is possible that residual contamination may remain in the subsurface soils and groundwater in the vicinity of the former USTs once located on the west side of the site.

**Figure 6**

1, 3 And 5 Choke Cherry Rd/ 9f and 11 Choke Cherry Rd/ 20-30 Upper Rock Circle, Gaithersburg - This site was once a former Kodak Processing Plant that was active from 1967 to 1999. The area was impacted by spills and improper disposal of photographic processing chemicals that were present on-site when the facility was active. The site was originally flagged for being listed on the following databases: MDE VCP, LRP, LUC, OCP, FINDs, National Pollution Discharge Elimination System (NPDES), and ECHO databases. Portions of the site received NFRD from MDE in both 2003 and 2010. Currently, LUCs and restrictions on the use of groundwater are imposed on the site. Review of the MDE-provided files identified the following:

1965 to 1998 - Kodak purchased the property on October 15, 1965 and, in 1967, began construction of the photo processing facility. In 1988, Qualex, a subsidiary of Kodak, assumed operations and, in 1994, Lerner, a subsidiary of Qualex, began operations at the facility. On October 15, 1998, JBG/JER Shady Grove L.L.C., purchased the property and leased the facility to Kodak to continue photo processing operations.

1967 to 1999 - Between 1967 and July 1999, photographic film processing operations occurred in the basement of a single-story building. The facility maintained permits during its operative years for heating oil tanks, wastewater discharge, and controlled hazardous substances. A variety of chemicals such as metal reagents, mineral spirits, and caustic and acid solutions were utilized in the photo processing operation. Spent silver, mineral spirits, and cyanide generated by the photo processing operations were discharged to a network of floor drains and sumps that entered the sanitary sewer system and an on-site dry well, located adjacent to the solvent room. Spent chemical sludge was also transported off-site as hazardous waste. In July 1999, operations at the facility ceased and in September 1999, Kodak began demolition activities, which were completed in March 2000.

1990 to 2003 - Multiple environmental investigations conducted between 1990 and 2003 identified soil and groundwater contamination on the southern portion of the property beneath the basement. Soil contaminants detected included low levels of semi-volatile organic compounds (benzo[*a*]-anthracene, benzo[*b*]fluoranthene) and elevated levels of inorganics (arsenic, sulfides, cyanide). Groundwater contaminants detected were volatile organic compounds in the shallow aquifer and metals in the deep aquifer. In the shallow aquifer, the principal contaminants were chloroform, 1,1 DCE, acetone, 1,1-dichloroethane (1,1-DCA), 1,2-dichloroethane (1,2-DCA), 1,1,1-trichloroethane (1,1,1-TCA) and 1,1,2-trichloroethane (1,1,2-TCA), and traces of arsenic and selenium. In the deep aquifer, arsenic and selenium were identified. Groundwater contaminants were not detected in the domestic wells sampled in 2000.

2000 to 2010 - The site entered into the MDE VCP in 2000. On September 17, 2003, MDE issued a NFRD for the two parcels that abut the LOD along Shady Grove Road to the west and I-270 off-ramp to the south, contingent upon future limited residential use LUCs with a groundwater use restriction on the property. The remaining parcels that compose the Former Kodak Processing Plant/Danac Technological Park, subsequently received NFRDs from MDE, along with LUCs and groundwater use restrictions on the property. Groundwater monitoring data from 2003, identified detected concentrations of 1,1-DCE at 22 micrograms per liter (ug/l) in a monitoring well in the southwest corner of the site, near the LOD. The detected concentration exceeds the MDE Groundwater Cleanup Standard of 7 ug/l for 1,1-DCE. No data was identified in regard to off-site sampling. Based on local topography, groundwater is believed to be flowing to the southwest.

Currently - The site is developed with multi-story residential structures, with one large office building in the central portion, along with a grocery store, restaurant, and CVS pharmacy on the northwestern portion of the site. No monitoring wells from the previous investigations were observed on the property during the site reconnaissance. Based on the local topography, the hydraulic gradient appears to trend to the southwest.

**Figure 7**

15730 Shady Grove Road, Gaithersburg - This site is an active gas station that has been present on the property since at least 1971 when the first USTs were installed, including three 8,000-gallon gasoline USTs and one 550-gallon used oil UST. A soil vapor extraction (SVE)/pump and treat active remediation system was installed on the site after several of the USTs were excavated and removed in 1989. MDE granted closure in 1996; however, residual petroleum contamination may still exist on-site. Currently, there are three 10,000-gallon gasohol USTs, one 10,000-gallon diesel UST, one 1,000-gallon heating oil (diesel #2) UST, and one 550-gallon used oil UST on-site. Review of the MDE-provided files identified the following:

1989 – Three 8,000-gallon gasoline USTs were excavated and removed from the site. Three 10,000-gallon gasohol USTs, one 10,000-gallon diesel UST, one 1,000-gallon heating oil UST and one 550-gallon used oil UST were installed at the service station facility. Impacted soil and groundwater were present on-site and a SVE/pump and treat remediation system was installed along with 15 monitoring wells. Groundwater samples from monitoring wells indicate that concentrations of BTEX were present on-site. Based on a figure provided in the MDE documents, the local groundwater gradient appears to trend towards the southwest.

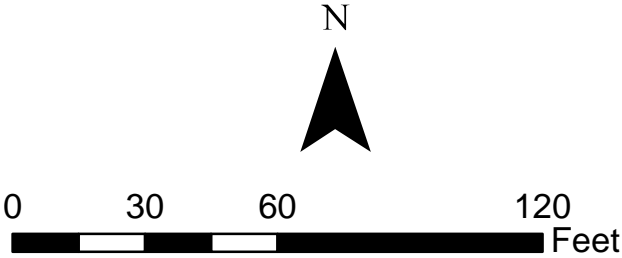

1996 – MDE granted permission to backfill the excavation. MDE also determined that no further action was required in regard to the impacted soil and groundwater that was remediated through the SVE/pump and treat remediation system and the 15 monitoring wells could be abandoned on-site. Additionally, a 550-gallon used oil UST and an associated OWS (both installed in 1989) were excavated and removed from the site. No impacted soil or groundwater was encountered during the removal of the OWS. The soil excavated during the removal of the used oil UST along with the soil interval at the bottom of the excavation were screened with a PID. Readings ranged from 15 to 97 ppm. A reading of 16 ppm was recorded in the soil interval several feet below the former used oil UST (the deepest reading collected).

2001 – Two monitoring wells were installed at opposing corners of the tank field to a depth of 2 ft below the invert of the USTs.

Currently - Four 10,000-gallon USTs (3 gasohol and 1 diesel), one 1,000-diesel UST and one 550-gallon used oil UST are currently in operation at the facility. It is unknown if groundwater at the site is still monitored due to the previous contamination found in 1989. The LOD encroaches onto the eastern boundary of the site; therefore, there is the potential for petroleum-impacted soils to be encountered within the LOD.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SUBJECT PROPERTY INFORMATION

#### ADDRESS

I-495/I-270  
ROCKVILLE, MD 20850

### TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifications refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

### STANDARD ENVIRONMENTAL RECORDS

## EXECUTIVE SUMMARY

### Records of Emergency Release Reports

HMIRS: Hazardous Materials Information Reporting System

A review of the HMIRS list, as provided by EDR, and dated 02/27/2020 has revealed that there are 61 HMIRS sites within approximately 0.25 miles of the requested target property.

| <u>Site</u>          | <u>Address</u>       | <u>Direction / Distance</u> | <u>Map ID / Focus Map(s)</u> | <u>Page</u> |

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.  
MD-PEMIS (Maryland - Permanent (Air) Emission) database houses data related to Air Emissions. Also known to the EPA as National Emissions Inventory (NEI).

**Environmental Interest/Information System:**

MD-RCRA (Maryland - Resource Conservation And Recovery Act Information System) houses state information relating to the Resource Conservation and Recovery Act (RCRA).

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

MD-PEMIS (Maryland - Permanent (Air) Emission) database houses data related to Air Emissions. Also known to the EPA as National Emissions Inventory (NEI).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
