Note: 95th percentile queuing reported using Synchro software.
- Hyphen denotes that no value was recorded for this metric.
~ Volume exceeds capacity, queue is theoretically infinite. Queue shown is maximum after two cycles.
m Volume for the 95th percentile queue is metered by upstream signal.

Reporting Source:
‡ HCM 2000 Signalized Intersection Capacity Analysis used for Delay and LOS.

Note: 95th percentile queuing reported using Synchro software.

- Hyphen denotes that no value was recorded for this metric.

m Volume for the 95th percentile queue is metered by upstream signal.

Volume for the 95th percentile exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

~ Volume exceeds capacity, queue is theoretically infinite. Queue shown is maximum after two cycles.

\- Hyphen denotes that no value was recorded for this metric.

m Volume for the 95th percentile queue is metered by upstream signal.

\# Volume for the 95th percentile exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

Note: 95th percentile queuing reported using Synchro software.

- Hyphen denotes that no value was recorded for this metric.

~ Volume exceeds capacity, queue is theoretically infinite. Queue shown is maximum after two cycles.

m Volume for the 95th percentile queue is metered by upstream signal.

Volume for the 95th percentile exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

Note: 95th percentile queuing reported using Synchro software.

- Hyphen denotes that no value was recorded for this metric.

* Unsignalized intersection 95th percentile queue reported in number of vehicles.

m Volume for the 95th percentile queue is metered by upstream signal.

Volume for the 95th percentile exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

§ Red light on Montrose Road by Farm Lane is triggered by pedestrian signal call. Farm Lane is yield-controlled.

Note: 95th percentile queuing reported using Synchro software.

- Hyphen denotes that no value was recorded for this metric.

* Unsignalized intersection 95th percentile queue reported in number of vehicles.

m Volume for the 95th percentile queue is metered by upstream signal.

Volume for the 95th percentile exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

§ Red light on Montrose Road by Farm Lane is triggered by pedestrian signal call. Farm Lane is yield-controlled.

							T/R	-	-	-	-

Note: 95th percentile queuing reported using Synchro software.

- Hyphen denotes that no value was recorded for this metric.

~ Volume exceeds capacity, queue is theoretically infinite. Queue shown is maximum after two cycles.

m Volume for the 95th percentile queue is metered by upstream signal.

Volume for the 95th percentile exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

DRAFT

SYNCHRO ANALYSIS RESULTS SUMMARY

I-370 (SAM EIG HIGHWAY) RESULTS

Under 2017 Existing Conditions, I-270 at I-370 is a system-to-system interchange with signalized intersections at Washingtonian Boulevard, Fields Road, Diamondback Drive, and MD 119. 2017 Existing Conditions analysis indicated that all intersection along the I-370 corridor operate at LOS D or better during peak hours.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that all intersections along the I-370 corridor continue to operate at LOS D or better.

Under the 2027 Preferred Alternative, a new Managed Lanes (ML) ramp connection with access to I-270 Southbound and from I-270 Northbound is added along I-370. With this infrastructure in place, 2027 Preferred Alternative analysis indicated that all intersections along the I-370 corridor continue to operate at LOS D or better.

There are no anticipated infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that all intersections along the I-370 corridor continue to operate at LOS D or better.

Anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative analysis indicated that all intersections along the I-370 corridor continue to operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-1 summarizes the capacity analysis results along I-370.

Table I-1 – I-370 Capacity Analysis Results

SHADY GROVE ROAD RESULTS

Under 2017 Existing Conditions, I-270 at Shady Grove Road is a partial cloverleaf interchange with signalized intersections at Corporate Boulevard and Choke Cherry Road. Additional locations studied as part of this corridor include the signalized intersections of Omega Drive at MD 28, Omega Drive/Fields Road at Washingtonian Boulevard, Redland Boulevard at Piccard Drive and the unsignalized intersection of Omega Drive at I-270 Southbound Off-Ramp. 2017 Existing Conditions analysis indicated that the unsignalized intersection of Omega Drive at I-270 Southbound Off-Ramp approaches capacity limits (LOS E) during the PM peak hour, while all signalized intersections would operate at LOS D or better during peak hours.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that Omega Drive at I-270 Southbound Off-Ramp continues to approach capacity limits (LOS E) during the PM peak hour. All signalized intersections continue to operate at LOS D or better.

Under the 2027 Preferred Alternative, Shady Grove Road Southbound adds an additional thru lane that that will now feed into an exclusive right-turn lane for the I-270 Northbound on-ramp. The 2027 Preferred Alternative analysis indicated that Omega Drive at I-270 Southbound Off-Ramp continues to approach capacity limits (LOS E) during the PM peak hour. All signalized intersections continue to operate at LOS D or better.

There are no anticipated infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that Omega Drive at I-270 Southbound Off-Ramp approaches or exceeds capacity limits (LOS E or F) during peak hours, while all signalized intersections continue to operate at LOS D or better.

Anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative analysis indicated that Omega Drive at I-270 Southbound Off-Ramp improves its operation to a LOS D in the AM peak hour but continues to exceed capacity limits (LOS F) during the PM peak hour. All signalized intersections continue to operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-2 summarizes the capacity analysis results along Shady Grove Road.

Table I-2 – Shady Grove Road Capacity Analysis Results

Note: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

[§]Unsignalized intersection is stop controlled. LOS and delay listed are for the worst approach.

GUDE DRIVE RESULTS

Under 2017 Existing Conditions, Gude Drive forms an overpass over I-270 with signalized intersections at Research Boulevard and Piccard Drive. 2017 Existing Conditions analysis indicated that Gude Drive at Research Boulevard intersection approaches or exceeds capacity limits (LOS E or F) during peak hours. The Piccard Drive intersection operates at LOS B or better during peak hours.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that Gude Drive at Research Boulevard continues to approach or exceed capacity limits (LOS E or F) during peak hours, while the Piccard Drive intersection continues to operate at LOS B or better.

Under the 2027 Preferred Alternative, a new signalized Managed Lanes (ML) connection with access to I-270 Northbound and Southbound is added along Gude Drive. With these infrastructure changes in place, 2027 Preferred Alternative analysis indicated that all intersections along the Gude Drive corridor improve operations to LOS C or better.

There are no anticipated infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that Gude Drive at Research Boulevard continues to approach or exceed capacity limits (LOS E or F) during peak hours, while the Piccard Drive intersection continues to operate at LOS B or better.

Anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative analysis indicated that all intersections along the Gude Drive corridor operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-3 summarizes the capacity analysis results along Gude Drive.

Table I-3 – Gude Drive Capacity Analysis Results

Note: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

MD 28 (MONTGOMERY AVENUE) RESULTS

Under 2017 Existing Conditions, I-270 at MD 28 is a partial cloverleaf interchange with signalized intersections at Hurley Avenue and Laird Street/Bullard Circle. 2017 Existing Conditions analysis indicated that MD 28 at Hurley Avenue exceeds capacity limits (LOS F) during the PM peak hour. All other intersections along the corridor operate at LOS D or better during peak hours.

Between 2017 Existing and 2027 No Build Conditions at MD 28 and Hurley Avenue signalized intersection, the Southbound approach was restriped to create an exclusive Southbound left-turn lane and a shared through lane with right-turning movements. With these changes in place, 2027 No Build Conditions analysis indicated that all intersections along the MD 28 corridor operate at LOS C or better.

There are no known infrastructure changes between 2027 No Build Conditions and the 2027 Preferred Alternative. The 2027 Preferred Alternative analysis indicated that all intersections along the MD 28 corridor continue to operate at LOS C or better.

There are no anticipated infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that all intersections along the MD 28 corridor continue to operate at LOS C or better.

There are no anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative. The 2045 Preferred Alternative analysis indicated that all intersections along the MD 28 corridor continue to operate at LOS C or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-4 summarizes the capacity analysis results along MD 28.

Table I-4 – MD 28 Capacity Analysis Results

Note: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

MD 189 (FALLS ROAD) RESULTS

Under 2017 Existing Conditions, I-270 at MD 189 is a single-point urban interchange (SPUI) with signalized intersections at Wootton Parkway and Great Falls Road/Potomac Valley Road. 2017 Existing Conditions analysis indicated that the intersections of MD 189 at Wootton Parkway I-270 Ramps (SPUI) approach capacity limits (LOS E) during at least one peak hour. MD 189 at Great Falls Road/Potomac Valley Road operates at LOS C or better during peak hours.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that the intersections of MD 189 at Wootton Parkway and I-270 Ramps (SPUI) improve to LOS D during peak hours. MD 189 at Great Falls Road/Potomac Valley Road operates at LOS B or better.

Under the 2027 Preferred Alternative, the I-270 at MD 189 interchange is re-designed to a diverging diamond interchange. With these infrastructure changes in place, 2027 Preferred Alternative analysis indicated that all intersections along the MD 189 corridor operate at LOS D or better.

There are no anticipated infrastructure changes between 2027 No Build and 2045 No Build Conditions. The 2045 No Build Conditions analysis indicated that the intersections of MD 189 at Wootton Parkway and I-270 Ramps (SPUI) continue to approach capacity limits (LOS E) during at least one peak hour. MD 189 at Great Falls Road/Potomac Valley Road operates at LOS B or better.

Anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative analysis indicated that all intersections along the MD 189 corridor operate at LOS D or better during peak hours.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-5 summarizes the capacity analysis results along MD 189.

Table I-5 – MD 189 Capacity Analysis Results

Note: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

WOOTTON PARKWAY RESULTS

Under 2017 Existing Conditions, Wootton Parkway forms an overpass over I-270 with signalized intersections at Seven Locks Road and Tower Oaks Boulevard. The 2017 Existing Conditions analysis indicated that both intersections along the Wootton Parkway corridor operate at LOS D or better during peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that both intersections along the Wootton Parkway corridor operate at LOS C or better.

Under the 2027 Preferred Alternative, a new signalized Managed Lanes (ML) connection with access to I-270 Northbound and Southbound is added along Wootton Parkway. Additionally, a westbound left-turn lane is added at the intersection of Wootton Parkway at Seven Locks Road. With these infrastructure changes in place, 2027 Preferred Alternative analysis indicated that all intersections along the Wootton Parkway corridor operate at LOS C or better.

There are no anticipated roadway infrastructure changes between 2027 No Build and 2045 No Build Conditions. The 2045 No Build Conditions analysis indicated that both intersections along the Wootton Parkway corridor operate at LOS D or better during the peak hours.

Anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative indicated that all intersections along the corridor continue to operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-6 summarizes the capacity analysis results along Wootton Parkway.

Table I-6 – Wootton Parkway Capacity Analysis Results

Location	2017 Existing Conditions		2027 No Build Conditions		2027 Preferred Alternative		2045 No Build Conditions		2045 Preferred Alternative

Note: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

MONTROSE ROAD RESULTS

Under 2017 Existing Conditions, I-270 at Montrose Road is a full cloverleaf interchange with signalized intersections at Seven Locks Road, Tower Oaks Boulevard and Hitching Post Lane/Farm Haven Drive. A two-way stopped-controlled intersection at Park Potomac Avenue and a one-way yield-controlled T-intersection at Farm Lane are also located along the corridor. In addition, the intersections along Tower Oaks Boulevard at the I-270 Northbound Ramps/GEICO Entrance and Commercial Drive were also analyzed. The 2017 Existing Conditions analysis indicated that all signalized intersections along the Montrose Road and Tower Oaks Boulevard corridors operate at LOS D or better during the peak hours of the day. The stop-controlled intersection at Park Potomac Avenue approaches or exceeds capacity limits (LOS E or F) during peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that all signalized intersections along the Montrose Road and Tower Oaks Boulevard corridors continue to operate at LOS D or better during the peak hours of the day. The stop-controlled intersection at Park Potomac Avenue continues to approach or exceed capacity limits (LOS E or F) during peak hours.

There are no known infrastructure changes between 2027 No Build Conditions and the 2027 Preferred Alternative. The 2027 Preferred Alternative analysis indicated that all signalized intersections along the Montrose Road and Tower Oaks Boulevard corridors improve operations to LOS C or better during peak hours. The stop-controlled intersection at Park Potomac Avenue continues to approach or exceed capacity limits (LOS E or F) during peak hours.

There are no anticipated roadway infrastructure changes between 2027 No Build and 2045 No Build Conditions. The 2045 No Build Conditions analysis indicated that all signalized intersections along the Montrose Road and Tower Oaks Boulevard corridors continue to operate at LOS D or better during the peak hours of the day. The stop-controlled intersection at Park Potomac Avenue continues to approach or exceed capacity limits (LOS E or F) during peak hours.

There are no anticipated roadway infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative. The 2045 Preferred Alternative analysis indicated that all signalized intersections along the Montrose Road and Tower Oaks Boulevard corridors continue to operate at LOS D or better during the peak hours of the day. The stop-controlled intersection at Park Potomac Avenue continues to approach or exceed capacity limits (LOS E or F) during peak hours.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-7 summarizes the capacity analysis results along Montrose Road and Tower Oaks Boulevard.

Notes: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

[§]Red light on Montrose Road by Farm Lane is triggered by pedestrian signal call. Farm Lane is yield-controlled.

WESTLAKE TERRACE RESULTS

Under 2017 Existing Conditions, Westlake Terrace provides access at a signalized T-intersection to the I-270 Northbound High Occupancy Vehicle (HOV) lanes and from the I-270 Southbound HOV lanes. Signalized intersections at the Westfield Montgomery Mall Entrance/Motor City Drive and Rockledge Drive are located to the east and west of the HOV lane connection, respectively. The 2017 Existing Conditions analysis indicated that all intersections along the Westlake Terrace corridor operate at LOS D or better during peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that all intersections along the Westlake Terrace corridor continue to operate at LOS D or better.

Under the 2027 Preferred Alternative, the existing HOV lane connection is being converted to a signalized Managed Lanes (ML) connection providing access both to and from the I-270 Northbound and Southbound ML. With these infrastructure changes in place, 2027 Preferred Alternative analysis indicated that all intersections along the Westlake Terrace corridor continue to operate at LOS D or better.

There are no anticipated roadway infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that all intersections along the Westlake Terrace corridor continue to operate at LOS D or better.

Anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative indicated that all intersections along the corridor continue to operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-8 summarizes the capacity analysis results along Westlake Terrace.

Table I-8 – Westlake Terrace Capacity Analysis Results

Notes: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

[1] In 2027/2045 Build, the Spur ramp connection converts to Managed Lanes access.

DEMOCRACY BOULEVARD RESULTS

Under 2017 Existing Conditions, I-270 at Democracy Boulevard is a partial cloverleaf interchange with signalized intersections at Taveshire Way, the I-270 Southbound Off-Ramp, the I-270 Southbound On-Ramp from Democracy Boulevard Westbound, the I-270 Northbound Off-Ramp to Democracy Boulevard Westbound, the I-270 Northbound Off-Ramp to Democracy Boulevard Eastbound, and Fernwood Road. The 2017 Existing Conditions analysis indicated that the Fernwood Drive intersection approaches capacity limits (LOS E) during the AM Peak and the I-270 SB Off-Ramp intersection exceeds capacity limits (LOS F) in the PM Peak. All other intersections along the Democracy Boulevard corridor operate at LOS C or better during the peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that all intersections along the Democracy Boulevard corridor improve operations to LOS D or better.

Under the 2027 Preferred Alternative, the geometry of the I-270 Southbound signalized ramp intersections are combined into one signalized intersection. With these changes in place, 2027 Preferred Alternative analysis indicated that all intersections along the Democracy Boulevard corridor continue to operate at LOS D or better.

There are no anticipated roadway infrastructure changes between 2027 No Build and 2045 No Build Conditions. The 2045 No Build Conditions analysis indicated that all intersections along the Democracy Boulevard corridor continue to operate at LOS D or better.

Anticipated infrastructure changes between 2045 No Build Conditions and 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative analysis indicated that all intersections along the Democracy Boulevard continues corridor continue to operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-9 summarizes the capacity analysis results along Democracy Boulevard.

Table I-9 – Democracy Boulevard Capacity Analysis Results

ROCKLEDGE DRIVE & MD 187 (OLD GEORGETOWN ROAD) RESULTS

Under 2017 Existing Conditions, I-270 at Rockledge Drive and MD 187 (Old Georgetown Road) are adjacent diamond interchanges with overpasses over I-270 located approximately 1,500 feet apart. Signalized intersections at Rock Forest Drive, the I-270 Southbound Ramps, and the I-270 Northbound Ramps are located along Rockledge Drive. Signalized intersections at Rock Spring Drive, the I-270 Southbound Ramps, the I-270 Northbound Ramps, and Tuckerman Lane are located along MD 187. The 2017 Existing Conditions analysis indicated that the MD 187 at Tuckerman Lane intersection approaches or exceeds capacity limits (LOS E or F) during the peak hours and the MD 187 at Rock Spring Drive intersection approaches capacity limits (LOS E) during the AM peak. All other intersections along the Rockledge Drive and MD 187 corridors operate at LOS D or better during the peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that the MD 187 at Tuckerman Lane intersection continues to approach or exceed capacity limits (LOS E or F) during the peak hours and the MD 187 at Rock Spring Drive intersection approaches capacity limits (LOS E) during the PM peak hour. All other intersections along the Rockledge Drive and MD 187 corridors operate at LOS D or better.

There are no known infrastructure changes between 2027 No Build Conditions and the 2027 Preferred Alternative. The I-270 Managed Lanes (ML) tie into the general-purpose lanes east of the MD 187 interchange. The 2027 Preferred Alternative analysis indicated that the MD 187 at Tuckerman Lane intersection continues to approach or exceed capacity limits (LOS E or F) during the peak hours and the MD 187 at Rock Spring Drive intersection continues to approach capacity limits (LOS E) during the PM peak hour. All other intersections along the Rockledge Drive and MD 187 corridors continue to operate at LOS D or better.

There are no anticipated roadway infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that the MD 187 at Tuckerman Lane intersection exceeds capacity limits (LOS F) during peak hours and the MD 187 at Rock Spring Drive intersection exceeds capacity limits (LOS F) during the PM peak hour. All other intersections along the Rockledge Drive and MD 187 corridors operate at LOS D or better.

There are no anticipated roadway infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative. Similar to the 2027 Preferred Alternative, the I-270 MLs tie into the general-purpose lanes east of the MD 187 interchange. The 2045 Preferred Alternative analysis indicated that the MD 187 at Tuckerman Lane intersection continues to exceed capacity limits (LOS F) during peak hours and the MD 187 at Rock Spring Drive intersection continues to exceed capacity limits (LOS F) during the PM peak hour. All other intersections along the Rockledge Drive and MD 187 corridors operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-10 summarizes the capacity analysis results along Rockledge Drive and MD 187.

Table I-10 – Rockledge Drive and MD 187 Capacity Analysis Results

Note: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

MD 190 (RIVER ROAD) RESULTS

Under 2017 Existing Conditions, I-495 at MD 190 is a partial cloverleaf interchange with signalized intersections at Seven Locks Road and Burdette Road. 2017 Existing Conditions analysis indicated that all intersections along the MD 190 corridor operate at LOS D or better during the peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that all intersections along the MD 190 corridor continue to operate at LOS D or better.

Under the 2027 Preferred Alternative, a new signalized Managed Lanes (ML) connection with access to I-495 Inner and Outer Loops is added along MD 190. The interchange is redesigned to remove looping off-ramps and function as a traditional diamond interchange for I-495 general purpose traffic. With these infrastructure changes in place, 2027 Preferred Alternative analysis indicated that all intersections along the corridor continue to operate at LOS D or better.

There are no anticipated infrastructure changes between the 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicates that all intersections along the MD 190 corridor continue to operate at LOS D or better.

Anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative are the same as those for the 2027 Preferred Alternative. The 2045 Preferred Alternative indicated that the intersections of MD 190 at Seven Locks Road and Burdette Rd approach capacity limits (LOS E) during the PM peak hour. All other intersections along the corridor continuing to operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-11 summarizes the capacity analysis results along MD 190.

Notes: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

[1] In 2027/2045 Phase 1 Build, the I-495 Outer Loop On-Ramp ties into this location.

[2] In 2027/2045 Phase 1 Build, the I-495 Inner Loop Off-Ramp ties into this location.

MD 187 (OLD GEORGETOWN ROAD) AT I-495 RESULTS

Under 2017 Existing Conditions, I-495 at MD 187 is a traditional diamond interchange with signalized intersections at Lone Oak Drive / Manor Oak Way and Ryland Drive / Church Driveway (St. Jane Frances de Chantal Catholic Church). 2017 Existing Conditions analysis indicated that all intersections along the MD 187 corridor operate at LOS C or better during the peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that all intersections along the corridor operate at LOS D or better.

There are no known infrastructure changes between 2027 No Build Conditions and the 2027 Preferred Alternative. The I-495 Managed Lanes (ML) tie back into the general-purpose lanes west of the MD 187 interchange. The 2027 Preferred Alternative analysis indicated that all intersections along the corridor continue to operate at LOS D or better.

There are no anticipated infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that MD 187 at I-495 Outer Loop Off-/On-Ramp intersection exceeds capacity limits (LOS F) during the AM peak hour. All other intersections along the corridor operate at LOS C or better.

The are no anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative. Similar to the 2027 Preferred Alternative, I-495 Managed Lanes (ML) tie back into the general-purpose lanes west of the MD 187 interchange. The 2045 Preferred Alternative analysis indicated that MD 187 at I-495 Outer Loop Off-/On-Ramp intersection continues to exceed capacity limits (LOS F) during the AM peak hour. All other intersections along the corridor continue to operate at LOS C or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Table I-12 summarizes the capacity analysis results along MD 187.

Table I-12 – MD 187 Capacity Analysis Results

Note: Results sourced by HCM methodology and shown as LOS (Delay in sec/vehicle)

MD 355 (ROCKVILLE PIKE) RESULTS

Under 2017 Existing Conditions, I-495 / I-270 at MD 355 forms an interchange with signalized intersections at Grosvenor Lane, I-495 Inner Loop Off-Ramp, Pooks Hill Road, and Alta Vista Road / Bellevue Drive. 2017 Existing Conditions analysis indicated that all intersections along the MD 355 corridor operate at LOS D or better during the peak hours of the day.

There are no known infrastructure changes between 2017 Existing and 2027 No Build Conditions. 2027 No Build Conditions analysis indicated that all intersections along the MD 355 corridor operate at LOS C or better.

There are no known infrastructure changes between 2027 No Build Conditions and the 2027 Preferred Alternative. The I-270 Managed Lanes (ML) tie back into the general-purpose lanes west of the MD 355 interchange. The 2027 Preferred Alternative analysis indicated that all intersections along the MD 355 corridor continue to operate at LOS C or better.

There are no anticipated infrastructure changes between 2027 No Build and 2045 No Build Conditions. 2045 No Build Conditions analysis indicated that all intersections along the MD 355 corridor operate at LOS D or better.

The are no anticipated infrastructure changes between 2045 No Build Conditions and the 2045 Preferred Alternative. Similar to the 2027 Preferred Alternative, the I-270 MLs tie back into the general-purpose lanes west of the MD 355 interchange. The 2045 Preferred Alternative analysis indicated that all intersections along the MD 355 corridor continue to operate at LOS D or better.

Queuing Analysis: Queuing analysis results indicated no spillback queues along the ramp length to the interstate facility.

Intersection Summary	
HCM 6th Ctrl Delay	25.5
HCM 6th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	26.0
HCM 6th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

Area Type: Other
Cycle Length: 150
Actuated Cycle Length: 150
Offset: 72 (48%), Referenced to phase 2:NBTL and 5:SBT, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.90
Intersection Signal Delay: 17.9 Intersection LOS: B
Intersection Capacity Utilization 83.4% ICU Level of Service E
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 1201: MD 187 & I-495 Outer Loop On Ramp/I-495 Outer Loop Off Ramp

Intersection Summary	
HCM 6th Ctrl Delay	25.3
HCM 6th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, SBR] is excluded from calculations of the approach delay and intersection delay.

HCM 6th LOS		C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [EBR, SBR] is excluded from calculations of the approach delay and intersection delay.
